Item 11 of the provisional agenda

THE NEW DELHI DECLARATION ON INCLUSIVE ICTs FOR PERSONS WITH DISABILITIES: MAKING EMPOWERMENT A REALITY

SUMMARY

Purpose: To inform the Executive Board about the outcomes and achievements of the first international conference entitled “From Exclusion to Empowerment: Role of Information and Communication Technologies for Persons with Disabilities”, organized by UNESCO and hosted by the Government of India from 24 to 26 November 2014 in New Delhi, India.

The Executive Board is invited to endorse its Final Outcome Document – The New Delhi Declaration on Inclusive ICTs for Persons with Disabilities: Making Empowerment a Reality, in order to ensure that UNESCO’s mandate and priorities figure prominently in shaping the post-2015 sustainable development agenda and beyond.

Action expected of the Executive Board: proposed decision in paragraph 12 of the present document.
Background

1. Today, there are more than one billion persons with disabilities in the world. The World Disability Report, published by the World Health Organization (WHO) and World Bank (WB), states that 15% of the world population have some form of disability. Some 62 million children of primary school age have a disability and 186 million children with disabilities have not completed primary school education. Furthermore, fewer than 2% of children with disabilities in developing countries are in school.

2. Persons with disabilities often suffer from discrimination and social exclusion, have fewer economic opportunities and endure higher rates of poverty. Their existence is specifically impeded by inadequate legal frameworks to protect their rights, a lack of financial and human resources to carry out their activities related to basic needs, but also a lack of opportunities to access education and information, the high cost of assistive technologies and the lack of inclusive services available.

3. Disability is a cross-cutting issue and all the Millennium Development Goals (MDGs) are relevant to persons with disabilities. Although the commitment of the United Nations to the rights of persons with disabilities and their inclusion are implied in all aspects of the MDGs, this has not automatically resulted in their inclusion in concerted efforts to meet the MDGs. Disability issues must be considered in any sustainable development agenda, in a clear dedicated manner.

4. The commitment of the United Nations (UN) to the rights of persons with disabilities was codified into the United Nations Convention in 2006. The United Nations Convention on the Rights of Persons with Disabilities (UNCRPD), the World Programme of Action, the Standard Rules on the Equalization of Opportunities for Persons with Disabilities and the Outcome Document to Promote Disability-Inclusive Development of the United Nations General Assembly High-level meeting in 2013, provide a strengthened international normative framework for disability-inclusive sustainable development. The next task to ensure that the rights of persons with disabilities are respected to their full extent would be for all the Member States to sign and ratify the CRPD and its Optional Protocol as a step to a more equitable and inclusive future.

5. Since the adoption of the UNCRPD, new trends in science and technology innovation have enabled ICT applications to better meet the needs of people with disabilities. The ICT applications have proved valuable in many ways, such as facilitating access to education, information, accessible products and services, providing new employment opportunities, raising awareness and facilitating participation in cultural and political life, recreation and leisure, as well as cooperation by enlarging the range of activities in all spheres of their life. Therefore, accessibility aspects should be included in every development phase, and persons with disabilities consulted and involved in the development of ICTs applications and services.

6. With a view to further empowering persons with disabilities and assuring the inclusion of disability issues into the sustainable development agenda of Member States, UNESCO, in cooperation with the Government of India, with support of the State of Kuwait, and also international, regional and national public and private partners, organized the first international Conference entitled From Exclusion to Empowerment: The Role of Information and Communication Technologies for Persons with Disabilities held in New Delhi from 24 to 26 November 2014.

7. This major international event also responded to the expectations by Member States requesting UNESCO to promote the concept of inclusive knowledge societies and to further explore the application of technological advances in that respect. Thus, the event aimed at promoting the human rights and fundamental freedoms of women and men, girls and boys with disabilities and at encouraging all stakeholders to take concrete measures for the empowerment of persons with disabilities through the effective application of ICTs.
8. The Conference was attended by some 700 participants from 80 countries, alongside with the film festival themed around disability issues, an ICT solutions-oriented exhibition and a special workshop. All regions and stakeholder groups were represented, including United Nations system organizations, intergovernmental and international organizations, governments, private sector, media, academia, technical and professional communities, civil society organizations and not least, many people with disabilities. High-level dialogues were held at plenary level and in 15 parallel sessions, divided into three thematic discussions on partnerships and sustainable development, accessibility and technological solutions, and access to information and knowledge [http://www.unesco-ci.org/ict-pwd/].

9. The annexed *Outcome Document – The New Delhi Declaration on Inclusive ICTs for Persons with Disabilities: Making Empowerment a Reality*, was developed by the open-ended, multi-stakeholder and high level drafting group, led by Mr Lenin Moreno, the United Nations Secretary General's Special Envoy on Disability and Accessibility, members of the UNCRDP committee and other prominent personalities, with the participation of all moderators, rapporteurs of the sessions and all other participants, emphasizing the rich strategic discussions recalling the urgent need for the full and unconditional inclusion of all citizens in the life of societies.

10. Since the 1994 Salamanca Statement, UNESCO has not issued a document endorsed by its governing bodies on the issue of disability. UNESCO considers that there is a need to move away from a medical, one-segment and segregated approach towards one that is more inclusive, cross-cutting, cross-dimensional, intersectional between disability and gender, and sustainable development oriented. This new approach also acknowledges the rights and freedoms of persons with disabilities to access information and knowledge by using open, inclusive and affordable technological and scientific solutions in all spheres of life.

11. The challenge ahead is to take fully into consideration the needs and aspirations of persons with disabilities by mainstreaming a disability perspective in all planned development actions, including legislation, policies and programmes, in all areas and at all levels of development, especially those under the mandate of UNESCO.

**Draft decision**

12. The Executive Board may wish to adopt a decision along the following lines:

   The Executive Board,

   1. Having examined document 196 EX/11,
   2. Takes note with appreciation of the action by UNESCO in this field;
   3. Expresses its gratitude to the Government of India for its substantial support and contribution to the organization of the conference “From Exclusion to Empowerment: Role of ICTs for Persons with Disabilities”;
   4. Endorses the Outcome Document in the Annex and decides to submit it for adoption by the General Conference at its 38th session;
   5. Requests the Director-General to:

      (a) Reinforce UNESCO's role in the implementation of the UNCRPD (Articles 9, 21, 24 and 31 and other), and the post-2015 inclusive development agenda; by also taking full advantage of the framework provided by the Intergovernmental Information for All (IFAP) strategic priority “Information accessibility”, as well as by the World Summit on the Information Society (WSIS) outcomes implementation process,
(b) Prepare UNESCO’s response for inclusion and empowerment of persons with disabilities in all areas of its mandate, with a special focus on application of open, inclusive and affordable technological solutions,

(c) Explore, in a cross-sectoral manner, possibilities by establishing an alliance of relevant private companies and research institutions working towards the empowerment of persons with disabilities and namely those operating in the field of information accessibility,

(d) Collect disability-disaggregated data where possible in its areas of mandate for evidence-based policy formulation, products and services development and other work,

6. **Encourages** Member States and donor community to allocate extrabudgetary resources for disability-specific and disability mainstreaming programmes and projects,

7. **Invites** the Director-General to report periodically to the Executive Board on the implementation of the Organization’s disability-related activities.
ANNEX

Outcome Document – The New Delhi Declaration
on Inclusive ICTs for Persons with Disabilities:
Making Empowerment a Reality

Adopted by the participants in the International Conference

From Exclusion to Empowerment: Role of ICTs for Persons with Disabilities

24-26 November 2014, New Delhi, India

Preamble

1. **Having in mind** the first Article of the Universal Declaration of Human Rights that “all human beings are born free and equal in dignity and rights, endowed with reason and conscience and should act towards one another in a spirit of brotherhood”,

2. **Having heard the message**, specially recorded for this International Conference in New Delhi from Cambridge University by Professor Stephen Hawking, one of the world’s greatest scientists, who suffers from Amyotrophic Lateral Sclerosis (ALS), “Please listen to me; I am speaking for the people you cannot hear..... without technology I would not be able to ask for a cup of tea, let alone speak of my theory of the universe”,

3. **Warmly thanking** the Government of India for hosting this international conference and applauding The Honorable Prime Minister of India’s announcement of a nationwide campaign for a “Digital India” which would bring ICTs to the doorstep of every Indian citizen, including those with disabilities,

4. **Considering that over 1 billion** individuals – 15% of the world’s population – have some form of disability and that therefore the full inclusion and equal participation of persons with disabilities is absolutely necessary to the United Nations post-2015 development agenda,

5. **Recalling** the several declarations culminating in the 1945 Charter of the United Nations, the International Covenants on Human Rights (1945), the UNESCO Convention against Discrimination in Education (1960), and other relevant normative instruments, particularly the United Nations Convention on the Rights of Persons with Disabilities (CRPD, 2006),

6. **Affirming** that universal access to information and knowledge, using Information and Communication Technologies (ICTs) and assistive technologies (AT), on an equal basis with others, for persons with disabilities is both an inalienable human right and precondition to live independently and participate fully and equally in society,

7. **Quoting** Mr Lenin Moreno, the United Nations Special Envoy on Disability and Accessibility “Scientific and technological development specific for persons with disabilities, including the development of inclusive, affordable and appropriate technologies, should enable the full enjoyment of their human rights and freedoms to the highest extent”,

8. **Supporting the sense of urgency** expressed in United Nations General Assembly Resolution A/Res/69/142 “Realizing the Millennium Development Goals and other internationally agreed development goals for persons with disabilities towards 2015 and beyond”,

9. **Repeating** the resolve of the 2003 World Summit on the Information Society “to build a people-centred, inclusive and development-oriented Information Society where everyone can create, access, utilize and share information and knowledge”,

11. **Reaffirming** that UNESCO is one of the United Nations system agencies actively involved in promoting disability rights and implementing the United Nations CRPD, in cooperation with national governments, the scientific community, civil society, industry partners and other international and United Nations system organizations,

12. **Applauding** the initiative of the “We Care” film festival to commit its twelve years’ experience to the Conference’s cause, because film and media of all kinds (including social media) play a key cultural and attitudinal role in shaping the way that societies treat disability issues,

13. **Convinced** that the New Delhi Conference addressed a unique combination of issues facing people with disabilities, encapsulating the critical causes of their disempowerment – denial of equal human rights, exclusion from educational and learning opportunities, the particular vulnerability of the elderly, women and children, the aggravating impact of poverty especially in remote and rural areas,

14. **Inspired** by factual evidence of cutting-edge technology geared towards enabling persons with disabilities to live independently and participate fully in all aspects of life, as the many examples presented in this conference, we commit to the development of inclusive ICTs as a gateway to knowledge, facilitating the journey from exclusion to empowerment within knowledge societies.

Accordingly, we the participants

**Call upon the world community to use their energies and abilities to**

1. Help change mindsets and attitudes by raising public awareness of the need for a more inclusive and human rights [“us” rather “them”] oriented approach to disability issues rather than a fundamentally medical approach,

2. Contribute to an environment of transparency, accountability, trust and inclusion among all stakeholders where key issues and possible solutions are discussed, as a matter of urgency, frankly and creatively, but also realistically and systematically,

3. Acknowledge the diversity of disability and the requirement for differentiated solutions to meet the needs and demands of persons with disabilities,

4. Design and implement specific programmes targeted at elderly people, women, girls and all children with disabilities,

5. Recognize the need to utilize advice and experience from people with disabilities in the design and production of mainstream and assistive products and services, incorporating this requirement from the outset rather than adding it as an afterthought,
6. Avoid discriminatory language, taking steps to combat negative attitudes, prejudices and stereotyping, in the recognition that these may engender and reflect exclusive mindsets;

7. Collect international best practices particularly dealing with legal, policy and regulatory factors impacting persons with disabilities, along with their rights and obligations;

8. Collaborate in the development of reliable, policy-oriented interdisciplinary statistical methodologies and in the collection of empirical, cost-effective and international comparative statistical evidence; this will involve sharing information, knowledge and experience – in the spirit of open access about the roll-out of specific ICT products and programmes as well as evidence on the usefulness of inclusive and accessible ICTs for persons with disabilities;

9. Recognize the obligations of the scientific and technological community to meet the needs of persons with disabilities and consult them on specifications for accessible, affordable and inclusive products, services and content taking into account “Universal Design for All” and “Open Access” principles.

Call upon governments to

1. Formulate national legal frameworks and mechanisms, policies, budgets, capacity plans and align them to provisions of the United Nations CRDP,

2. Adopt, implement and monitor national accessibility standards and measures including subsidies or fiscal relief to families which have people with disabilities,

3. Prioritize introducing legal frameworks and mechanisms to assure people with disabilities full participation in knowledge societies,

4. Fill data gaps, improve the quality of data collection and analysis, to inform policy and practice for effective solutions for persons with disabilities,

5. Encourage, stimulate, inspire and lead public and private partnerships aimed at the holistic inclusion of persons with disabilities in society,

6. Elaborate integrated plans to implement the above priorities which (a) covers all sectors where disability issues exist; (b) sets out specific targets and indicators; (c) demonstrates sustainability by capacity-building and technology transfer without which all efforts will fail or fade,

7. Make accessibility for persons with disabilities a required part of every procurement procedure, i.e. best practice within the civil service, when negotiating with private sector partners,

8. To act, when necessary, on the data evaluation from these performance reviews and to share their results with other governments and the international community, so that lessons can be learnt and a corpus of knowledge built up, about both capacity-building requirements and the development of specific ICT initiatives.

Call upon all stakeholders in the field of education – decision-makers, practitioners, technical experts, funders and administrators – to

1. Implement the pledge Education for All made at the two World Conferences (1990 and 2000) and through the Salamanca Statement (1994) aimed at ensuring that the curriculum, the teaching-learning process and the learning environment are truly inclusive of persons with disabilities,
2. Maximize value from international accessibility initiatives implemented by relevant public and private stakeholders who are targeting specific resources at the inclusion of persons with disabilities inside knowledge societies,

3. Address policy choices around the balance between establishing special schools for children with disabilities or including special needs education within mainstream educational settings, in either case promoting development of appropriate professional skills and the most advanced mainstream and assistive technologies,

4. Appreciate – with regard to Open and Distance Learning (ODL) – that its full potential for persons with disabilities can only be realized through specific actions personalized and adapted to the nature of ODL teaching techniques,

5. Act on the fact that the physical educational settings, both formal and non-formal, are certainly not the only gateway to empowerment, both because a majority of those with disabilities live in the more remote areas of poorer countries and because advances in ICTs have brought open and distance learning within the grasp of adult learners worldwide,

6. Understand that obstacles to inclusion and empowerment exist not only for those who have disabilities from birth or early in life but also for the elderly when they come to experience reduced hearing, vision, mobility or manual dexterity; and that these difficulties may call for specialized assistive skills and resources,

7. Take into account cultural factors in certain communities, but emphasizing the inalienable human right to education, freedom of expression, information, employment and empowerment,

8. Recognize and advocate the important role the media (both institutional and social) and civil society generally can play in fostering positive constructive attitudes to people with disabilities, including appreciation of the individuality of people’s needs together with the particular ICT and accessible information specifications for satisfying them.

We call upon corporations operating in the field of ICTs to

1. Recognize the obligations of the business, scientific and technological community to familiarize themselves, on the ground, with the needs and views of persons with disabilities and involve them on specifications for accessible, affordable and inclusive products and services – taking into account “Universal Design for All” principles,

2. Acknowledge the size of the potential customer base which may well justify, strictly on commercial, profit-aligned criteria, the mainstreaming of products for people with disabilities, and specifically to develop techniques for automated data collection on web accessibility using self-help groups where appropriate,

3. Emphasize and stress to their executives and managers the growing importance of successfully negotiated public-private partnerships, based on fruitful relationships between corporations, government agencies, research institutes, the voluntary sector and end-users and targeted towards the holistic inclusion of persons with disabilities in mainstream life.

The way forward for the United Nations system

1. Give due weight to the outcomes of this international Conference in New Delhi and communicate the Conference Declaration to UNESCO’s Member States and its governing bodies as well as to stakeholders in relevant intergovernmental programmes,
2. Integrate the recommendations of the international conference in the development and implementation of specific programmes, strategies and plans, reflecting the cross-cutting nature of disability issues with the post-2015 United Nations development goals and poverty reduction objectives,

3. Encourage all relevant stakeholders to take appropriate measures to ensure access to information and knowledge, particularly educational, public information, cultural, scientific nature materials in accessible formats and apply appropriate technologies to different kinds of disabilities,

4. Harness national and international cooperation through strategic partnerships, existing multi-stakeholder mechanisms and structures aimed at the holistic inclusion of persons with disabilities,

5. Recognize and advocate the important role media can play in fostering positive constructive attitudes to people with disabilities,

6. Improve data collection and, where appropriate, lead periodic reviews on the delivery, by all stakeholders, of the relevant international commitments and conference recommendations.
