ACKNOWLEDGMENTS

We would like to acknowledge the contribution of:

- Ministry of Education Malaysia (MoE) staff and contributors: Datin Paduka Ir. Dr. Siti Hamisah Tapsir, Mr. Muhammad Zainal Abidin Zainun.
- Malaysian National Commission for UNESCO staff and contributors: Mr. Mohd Khairul Adib Abd Rahman.
- International Science, Technology and Innovation Centre for South-South Cooperation Under the Auspices of UNESCO (ISTIC) staff and contributors: Dato Ir. Lee Yee Cheong, Dato Dr. Samsudin Tugiman, Ms. Zarmila Zalmi Sabot.
- UNESCO Office in Jakarta staff and contributors: Shahbaz Khan, Joana Vitorica Onaindia, Tchadie Alain Michel, Dinanti Erawati, Sharizad Sulaiman, Soyun Kang.
- Universiti Teknologi Malaysia staff and contributors: Prof. Dr. Zulkifli Yusop, Prof. Dr. Arshad Ahmad, Assoc. Prof. Dr. Sharif Moniruzzaman Shirazi, Assoc. Prof. Dr. Shareeshivadasan A/L Chelliapan, Dr. Noorul Hassan Zardari, Mrs. Nor Azizah Ismail, Mrs. Siti Salamah Mohd Shihab, Mr. Mohd. Farid Rahmat, Mrs. Fadzlin Md Sairan, Mr. Chew Teong Han, Mr. Mohamad Fairuz bin Hamzah, Mr. Izad Imran Ismail, Ms. Nalina A/P Paramasivan, Mr. Muhammad Taufik Hashim, Mr. Mohd. Rafi Abu Bakar, Assoc. Prof. Zainuddin Abdul Razak, Ms. Nurul Farhana Sufian, Mrs. Mirahani Maris, Mr. Mohamad Hafiz Asrun, Mrs. Suriyani Yusoff.

BACKGROUND

The current year 2015 is a critical moment globally for the transition into the Post-2015 Development Agenda as new framework for global development efforts. With the mandate to promote international cooperation in education, science, culture, communication and information, UNESCO's contribution to the Post-2015 Development Agenda is essential. UNESCO is mobilizing all its strengths for building sustainable, inclusive, knowledgeable societies needed for the century ahead.

The draft of the Sustainable Development Goals (SDG) 'outcome document' includes 17 goals and 169 targets, where the universality of Science and its critical role for poverty eradication and sustainable development has been highlighted.

The programmes of UNESCO in Natural Sciences have been able to expand cooperation beyond the network of the traditional intermediaries – what may be called the “UNESCO Natural Sciences family”: National Commissions, UNESCO Chairs, Category 2 Institutes and Centres, clubs and associations, National Committees of intergovernmental programmes and specialized networks, such as the Associated Schools Project Network.

Within this variety of partners, Category 2 Centres and Chairs play an important role as they expand the capacities and effectiveness to carry out activities, promote the outreach, impact and visibility at all levels, broaden the support base and mobilize resources and create synergies among all communities of UNESCO.

As part of the Post-2015 Development Agenda initiatives, the UNESCO Office, Jakarta (Regional Sciences Bureau for Asia and the Pacific) organized several events (international conference, workshop, forum and seminar) in May 2015 in Kuala Lumpur. This report presents the proceedings and main outcomes of the workshop on “Promoting Interaction and Knowledge Exchange Between UNESCO Natural Sciences Related Centres and Chairs in Asia and the Pacific”.

UNESCO

is mobilizing all its strengths
for building the sustainable,
inclusive, knowledge societies
needed for the century ahead.

MAIN ACTORS OF THE WORKSHOP

In Asia and the Pacific Region, the Category 2 Centres and Chairs have the capacity to provide a tangible contribution towards the realization of not only 'Natural Sciences' objectives and priorities as stated in the UNESCO Medium Term Strategy but also towards the implementation of the SDGs in the Post-2015 framework. The Category 2 Centres and Chairs can contribute by expanding and strengthening the UNESCO's global and regional outreach, and providing an collective impact, given that the competencies, scope of expertise, as well as training opportunities that they offer. Their dissemination is also an added value to strengthen North-South, South-South and triangular cooperation. In that regards, Category 2 Centres and Chairs from Africa will also contribute to the workshop.

Therefore, through the workshop, the Natural Sciences related Category 2 Centre and Chairs in Asia and the Pacific region are expected to share knowledge and experience in order to step forward to broaden perspectives as well as to scope strategic areas for cooperation.

MESSAGE OF ACTION

The workshop was organized in order to promote interaction and knowledge exchange for strengthening South-South cooperation between UNESCO Natural Sciences related Category 2 Centres and Chairs in Asia and the Pacific Region, and link with Africa. A strong and efficient Natural Sciences network in the region and globally will be critical to support the implementation of the Post-2015 Development Agenda framework in the upcoming years.

The following actions were the outcomes of the workshop:

- Provide an overview of UNESCO's Science Category 2 Centres and Chairs in Asia-Pacific and their contribution to programmes and activities of UNESCO in the Post-2015 Development Agenda framework.
- Identify potential gaps and overlaps among the Centres and Chairs in Asia-Pacific.
- Identify formats for collaboration and knowledge exchange on science research and sustainable development between the different stakeholders.
- Build networks for strengthening partnerships between the Category 2 Centres and Chairs in Asia-Pacific, in Africa, as well as among the Malaysian scientific network.
- Initiate reflection for the development of a regional strategy on funds raising and joint actions in the Asia-Pacific to support the Post-2015 Development Agenda.

WORKSHOP PRESENTATIONS

Below is the list of the presentations made during the Workshop. The slides of the presentations are given in Appendix 6.

Presentations from UNESCO Category 2 Centre for Natural Sciences:

1. *“International Science, Technology and Innovation Centre for South-South Cooperation Under The Auspices of UNESCO”*, by Dato Dr. Samsudin Tugirman, Director of ISTIC, Malaysia.
2. *“Space Technology: A Powerful Tool for Smart Management of UNESCO Properties”*, by Ms Liu Jie, International Centre on Space Technology for Natural and Cultural Heritage under the auspices of UNESCO (HIST), China.
3. *“An Introduction to ICQHS Activities, Plans and Potentials”*, by Mr Majid Labbaf Khaneiki, International Centre on Qanat and Historic Hydraulic Structures (ICQHS), Iran.
4. *“Regional Centre for Integrated River Basin Management, Kaduna, Nigeria (A Category 2 UNESCO Water Centre)”* by Dr. Omogbemi Omolojo Yaya, RC-IRBM, National Water Resource Institute, Nigeria.
5. *“Asia Pacific Centre for Ecohydrology (APCE)”* by Mr. Hery Harjono, Category 2 Centre of UNESCO / Indonesian Institute of Sciences (LIPI), Indonesia.
6. *“International Knowledge Centre for Engineering Sciences and Technology (IKGEST)”* by Dr. Liu Chang, China.
7. *“Isfahan Regional Centre for Technology Incubators and Science Parks Development (IRIS)”* by Dr. Hasan Khakbaz, Advisor of President of ISTT, Iran.
8. *“UNESCO Category 2 Regional Centre on Groundwater Resources, Education, Training and Research Institute in Kenya”* by Mr. Wilson M. Lekooet, Kenya Water Institute (KEWI), Kenya.
9. *“HTCKL Work Related to Science and UNESCO”* by Dr. Mohamed Roseli Zainal Abidin, Humid Tropics Centre Kuala Lumpur (HTCKL), Department of Irrigation and Drainage Malaysia.

Presentations from UNESCO Chairs for Natural Sciences:

1. *"IPCC Fifth Assessment Report, Lima Climate Action High Level Session Lima Peru"* by Dr. Rajendra K. Pachauri, India.
2. *"Environmental Management and Infrastructure Development Engineering, Saitama University Japan"* by Prof. Dr. Matsumoto Yasunao, Japan.
3. *"UNESCO Chair on Water Reuse, University of Tehran"* by Prof. Dr. Mohammad-Hossein Sarrafzadeh, Iran.
4. *"Presentation on behalf of Professor Dr. M.S. Swaminathan, Hony, UNESCO Jaques Cousteau Chair for Ecotechnology for Sustainable Rural Development"* by Dr. P.C. Kesavan, M.S. Swaminathan Research Foundation, India.
5. *"UNESCO Chair in Water Resources - Sudan"* by Assoc. Prof. Dr. Sameh Kantoush, Disaster Prevention Research Institute, Kyoto University.
6. *"Ulugbek UNESCO Chair on Physics and Astronomy"* by Prof. Dr. B. Fayzullaev, Department of Physics, National University of Uzbekistan.

Below are the brief summaries of the presentations made during the Workshop.

Title:	1. International Science, Technology and Innovation Centre for South-South Cooperation under the auspices of UNESCO.
Presenter:	Dato Dr. Samsudin Tugirman, Director of ISTIC, Malaysia.
Summary:	<p>This presentation covered the following main points:</p> <p>Description of ISTIC Priority Programmes including:</p> <ul style="list-style-type: none"> ① STI Policy: Many South countries do not have STI Policy to guide national development, those that have do not pay enough attention to SMEs and women. ISTIC Partners – Korean Institute for S&T Policy Evaluation and Planning (KISTEP), UTM Perdana School. ② Inquiry Based Science Education (IBSE) and Science, Technology, Engineering and Mathematics (STEM) Education: Assuring the supply pipeline of creative and discerning STI Professionals. ISTIC Partners with IAP SEP Council, Foundation La main a la pate, France. ③ Women in STI: Many South countries do not have policies on contribution of women in national development. ISTIC partners with NAM Institute for Empowerment of Women (NIEW), UN Women. ④ Maintenance of Infrastructure: Infrastructure project abound in the developing world, but there is little indigenous capacity to maintain them in good working order. ISTIC Partners with Engineering Staff College of India (ESCI) Hyderabad, Institute of Engineers Malaysia (IEM). ⑤ Technopreneurship: Researchers need training in grant application writing and business plan formulation. ISTIC Partners with USAINS, Universiti of Science Malaysia (USM). <p>ISTIC looks forward to strategic collaboration with other Category 2 Centres of UNESCO.</p> <p>Collaboration will be on win-win basis and sharing of resources.</p> <p>Recommend / Propose relevant participants to participate in future ISTIC programmes.</p> <p>Currently, ISTIC is establishing a collaboration with IRIS (Isfahan Regional Centre for Technology Incubators and Science Parks Development, under the auspices of UNESCO, Iran).</p>

Title:	2. Space Technology: A Powerful Tool for Smart Management of UNESCO Properties.
Presenter:	Ms Liu Jie, International Centre on Space Technology for Natural and Cultural Heritage under the auspices of UNESCO (HIST), China.
Summary:	<p>This presentation covered the following main points:</p> <ul style="list-style-type: none"> ① HIST is a Scientific Research Centre that assist developing countries with space technology to improve their capacity for conservation, management and sustainable development of World Heritage sites. ② The task of HIST is also helping developing countries' policy makers and practitioners to strengthen capacity building on the use of space technologies for better conservation and management of the properties. ③ HIST research results have been used for education and publicity. ④ Currently HIST is facing a few challenges such as Advisory Bodies and States Parties that have limited capacity to use space technology. There is a lack of accurate boundary data. Despite a wealth of data and case studies, there is still a lack of robust data at appropriate spatial and temporal resolutions. HIST is in need for powerful computing capacity. HIST also needs to build on the momentum of individual case studies in order to mainstream the use of space technology at the institutional level. ⑤ Smart management of UNESCO properties would benefit from space technologies, particularly the development of Earth observation. ⑥ HIST would like to work closely with related space organizations and other international partners to make more significant contributions for the smart management of UNESCO properties.

Title:	3. An Introduction to ICQHS Activities, Plans and Potentials.
Presenter:	Mr Majid Labbaf Khaneiki, International Centre on Qanat and Historic Hydraulic Structures (ICQHS), Iran.
Summary:	<p>This presentation covered the following main points:</p> <ul style="list-style-type: none"> ① Description of ICQHS mission to recognize the transfer of knowledge and experiences, promotion of information and capacities to all the aspects of Qanat technology and other historic hydraulic structure to fulfill sustainable development of water resources. ② ICQHS focuses on study towards the Destructive Impacts of the Developmental Programmes on Qanats. It also does research on feasibility of generation of electricity out of Qanat water current. A study on new methods for building and maintaining Qanat and methodology of preparing Qanat Atlas with aid of GIS. ③ ICQHS also holds training courses on historic hydraulic structures, Qanat technology and training courses to acquaint the consulting engineers with nomination of historic hydraulic structures on the UNESCO World Heritage list. International training course on Qanat technology and preservation of historic hydraulic structures is also available. ④ ICQHS organized International Scientific gatherings on Traditional Knowledge for Water Resources Management and produced a publication on traditional knowledge for water resources management.

Title:	4. Regional Centre for Integrated River Basin Management, Kaduna, Nigeria (A Category 2 UNESCO Water Centre).
Presenter:	Dr. Omogbemi Omolaju Yaya, RC-IRBM, National Water Resource Institute, Nigeria.
Summary:	<p>This presentation covered the following main points:</p> <ul style="list-style-type: none"> ① RC-IRBM objectives are to facilitate interaction among different scientific and institutional stakeholders and provide support to River Basin Development Authorities or Organizations in the West Africa Region. It also conducts and promotes hydro-informatics, integrated water resources management and socio-economic research. ① RC-IRBM coordinates the implementation of cooperative research projects and studies with regional, federal and local authorities as well as private sectors. ① Currently, RC-IRBM builds and runs networking for information sharing, knowledge exchange and capacity-building in Member States of the West Africa region; as well as organizes training courses, seminars and workshops.

Title:	5. Asia Pacific Centre for Ecohydrology (APCE).
Presenter:	Mr. Hery Harjono, Category 2 Centre of UNESCO / Indonesian Institute of Sciences (LIPI), Indonesia.
Summary:	<p>This presentation covered the following main points:</p> <ul style="list-style-type: none"> ① APCE's focus is on ecological approach to water resources management, which provides sustainable water for the people by harnessing science and technology, education and culture. ① APCE is committed to contribute towards overcoming current and important issues of national, regional and global interest such as poverty, disaster risk reduction and climate change mitigation and adaptation. ① By 2021 APCE aims to develop excellent expertise in: <ul style="list-style-type: none"> ❖ Relationships among ecological pattern and hydrological process; ❖ Disturbance and dynamics in natural and anthropogenic ecology and hydrology; ❖ Ecohydrological approaches to biodiversity conservation, environmental management and ecological restoration; ❖ Integrating hydrology with ecological planning, design and architecture or reverse; ❖ Transdisciplinary studies of regional sustainability from scopes of ecohydrology, ecology, culture (society) or integration of them.

Title:	6. International Knowledge Centre for Engineering Sciences and Technology (IKCEST).
Presenter:	Dr. Liu Chang, China.
Summary:	<p>This presentation covered the following main points:</p> <ul style="list-style-type: none"> ⌚ IKCEST main task is to establish an international engineering and technology resources hub. IKCEST aims to cooperate with research institutes, enterprises and institutions of higher learning worldwide to build a widely connected international hub for engineering and technology, resources, thus laying a global data foundation from which to operate. ⌚ IKCEST also wants to establish a public data service platform, and to develop the technology for mining and analyzing knowledge from big data. ⌚ IKCEST would like to cooperatively build professional knowledge service, systems, and to build capacity in developing countries. ⌚ IKCEST will foster interdisciplinary engineering talents with big data processing ability. ⌚ IKCEST will assist UNESCO to fulfill its aims and support its action plans.

Title:	7. Isfahan Regional Centre for Technology Incubators and Science Parks Development (IRIS).
Presenter:	Dr. Hasan Khakbaz, Advisor of President of ISTT, Iran.
Summary:	<p>This presentation covered the following main points:</p> <ul style="list-style-type: none"> ⌚ ISTT mission intends to prepare the ground for the development of technology incubators and science parks in the region by providing consultations, training courses and capacity building. ISTT is also facilitating the international relations among science parks and incubators with their counterparts in the region. ⌚ Since its official establishment in May 2010, IRIS has developed different programmes and plans. Among them are: <ul style="list-style-type: none"> ❖ Organizing the official inauguration ceremony and inviting ECO countries ambassadors to attend; ❖ Formation of the secretariat of the Centre; ❖ Allocating a space in ISTT to IRIS and equipping it; ❖ Designing and developing the logo of the centre; ❖ Determining the Governing Board members and Directors of Centre with cooperation of UNESCO; ❖ Organizing seven meetings of Governing Board members and developing the work plan of the Centre; and ❖ Training Workshops (more than 40 National and International workshop with the attendance of international experts from Japan, South Korea, Germany, UK, Spain, Poland, Romania, Malaysia, China, Tunisia, Australia and etc)

Title:	8. UNESCO Category 2 Regional Centre on Groundwater Resources, Education, Training and Research Institute in Kenya.
Presenter:	Mr. Wilson M. Lekoomet, Kenya Water Institute (KEWI), Kenya.
Summary:	<p>This presentation covered the following main points:</p> <ul style="list-style-type: none"> ① Kenya Water Institute (KEWI) objectives include the conduct of research, offering professional training, providing policy advise, facilitating technological transfer and promoting regional collaboration and exchange of experience. ① KEWI is active in training on groundwater for both students and clients in Kenya and the region. KEWI is also doing geological surveys and pursuing degree programmes in Universities in Kenya. It is aimed at improving water / groundwater management capacity within the institution and the country. ① Today, in collaboration with other partners (JKUAT and living Water African Region), KEWI is in the process of establishing a joint five year project whose purpose is to develop capacity for the drilling technology experts. Under this project about twelve experts will be trained at PhD level, twenty at master level and about 150 at advance diploma level. ① Recently, UNESCO undertook a groundwater mapping project in Turkana, which culminated in the discovery of large ground water reservoirs. KEWI and the Category 2 Centre will play a major role in furthering this course and will serve as a hub for capacity development in water related matters in the East Africa Region.

Title:	9. HTCKL Work Related to Science and UNESCO.
Presenter:	Dr. Mohamed Roseli Zainal Abidin, Humid Tropics Centre Kuala Lumpur (HTCKL), Department of Irrigation and Drainage Malaysia.
Summary:	<p>This presentation covered the following main points:</p> <ul style="list-style-type: none"> ① HTCKL objectives are to promote a conducive atmosphere for collaboration through technology and information exchange, education and science. HTCKL helps to increase scientific technologies knowledge about hydrological cycle thus increasing the capacity to better manage and develop the water resources in a holistic manner and to promote and increase scientific and technological knowledge about urban storm water management, ecohydrology, humid tropics and water education. ① HTCKL initiatives provides the execution and implementation of the Post 2015 Development Agenda especially for Sustainable Development Goal No. 6: <i>Ensuring availability and sustainable management of water and sanitation for all.</i> ① UNESCO-IHP Cross-Cutting Programmes related to HTCKL includes: <ul style="list-style-type: none"> ❖ UNESCO Switch-in-Asia: Urban Water Management; SWITCH – Sustainable Water Management Improves Tomorrow's Cities Health; ❖ AP Friends; Asia Pacific Flow Regimes from International Experimental and Network Data; ❖ UNESCO-HELP River basin (Langat River): Hydrology for the Environment, Life and Policy; ❖ Integrated Water Resources Management (IWRM). ① In IHP-VII Strategic Plan 2014-2021, HTCKL is involved in: <ul style="list-style-type: none"> ❖ Water related Disasters and Hydrological Change; ❖ Addressing Water Scarcity Quality; ❖ Water and Human Settlements of the future; ❖ Ecohydrology, Engineering Harmony for a Sustainable World; and ❖ Water Education, Key for Water Security

Title:	10. IPCC Fifth Assessment Report, Lima Climate Action High Level Session, Lima Peru.
Presenter:	Dr Rajendra K. Pachauri, India (via teleconference).
Summary:	<p>This presentation covered the following main points:</p> <ul style="list-style-type: none"> ① Description of the Intergovernmental Panel on Climate Change (IPCC) Fifth Assessment Report. ① Continued warming increases the risk of severe, pervasive and irreversible impacts. ① Risks are unevenly distributed and are generally greater for disadvantaged people and communities in countries at all levels of development. ① People who are socially, economically, culturally, politically, institutionally or otherwise marginalized are especially vulnerable to climate change. ① Ambitious mitigation is affordable and translates into delayed but not foregone growth (entails losses in global consumption of median value 1.7% in 2030). ① Estimated costs on mitigation do not account for the benefits of reduced climate change. ① Many impact such as loss of human lives, cultural heritage and ecosystem services are difficult to value and monitor and thus they are poorly reflected in estimates of losses.

Title:	11. Environmental Management and Infrastructure Development Engineering, Saitama University Japan.
Presenter:	Prof. Dr. Matsumoto Yasunao, Japan.
Summary:	<p>This presentation covered the following main points:</p> <ul style="list-style-type: none"> ① Description of the UNESCO Chair at Saitama University Japan on Environmental Management and Infrastructure Development Engineering. ① The Chair's objective is to promote collaboration between the researchers and the research team of the university and other universities and institutions. It also attracts prospective students to our existing International Graduate Programme in Civil and Environmental Engineering. The Chair allows sharing of experience and knowledge in environmental management and infrastructure development engineering research and development. ① Saitama University Research Groups are as follows: <ul style="list-style-type: none"> ❖ Geotechnical and Geosphere Research Group; ❖ Earthquake Disaster Prevention Mitigation Group; ❖ Transporting & Planning Group; ❖ Structural Engineering Mechanics and Materials Group; and ❖ Hydraulic and Environment Engineering Group.

Title:	12. UNESCO Chair on Water Reuse, University of Tehran.
Presenter:	Prof. Dr. Mohammad-Hossein Sarrafzadeh, Iran.
Summary:	<p>This presentation covered the following main points:</p> <ul style="list-style-type: none"> ⌚ The water crisis in the world involves: <ul style="list-style-type: none"> ❖ 1.1 billion people live without clean drinking water ❖ 2.6 billion people lack adequate sanitation ❖ 3900 children die every day from water borne diseases ⌚ UNESCO Chair on Water Reuse, University of Tehran is involved in post graduate teaching programmes, training, research and institutional development (strengthening of information / library services, laboratories and etc.) ⌚ Among its objectives are gathering the available expertise in the field of water reuse and facilitate information transfer. It also creates network between water institutions to facilitate exchange of experience and information nationally, regionally and internationally. Furthermore, it conducts and contributes to workshop and conferences of national, regional and international nature to push forward exchange of experience. ⌚ University of Tehran is also engaged in producing technological developments for water reuse, saving water by recycling and ground water recharge. Developing low-cost methods for sanitary disposal of municipal wastewater. Activities to reduce pollution of rivers and other surface water and provide a reliable water supply to farmers.

Title:	13. Presentation on behalf of Professor Dr. M.S. Swaminathan, Hony. UNESCO Jaques Cousteau Chair for Ecotechnology for Sustainable Rural Development.
Presenter:	Dr. P.C. Kesavan, M.S. Swaminathan Research Foundation, India.
Summary:	<p>This presentation covered the following main points:</p> <ul style="list-style-type: none"> ⌚ Green Revolution and the Paradox of Grain Mountains and Hungry Millions. <ul style="list-style-type: none"> ❖ Green Revolution (GR) provided food security at the national level; ❖ GR did not create more on-farm and off-farm livelihoods; ❖ GR not integrated with sustainable rural development; and ❖ GR is largely monocropping; loss of agrobiodiversity. ⌚ Ecotechnology Revolution <ul style="list-style-type: none"> ❖ Blending frontier technology with traditional wisdom and ecological prudence. These then become eco-technologies with pro-nature, pro-poor and pro-women orientation; ❖ Ecotechnologies involve concurrent attraction to Ecology, Energy, Equity, Economics, Employment and Ethics; and ❖ Ecotechnologies are in action in MSSRF's Biovillages.

Title:	14. UNESCO Chair in Water Resources - Sudan.
Presenter:	Assoc. Prof. Dr. Sameh Kantoush, Disaster Prevention Research Institute, Kyoto University.
Summary:	<p>This presentation covered the following main points:</p> <ul style="list-style-type: none"> ① UNESCO-CWR mission is to build, enhance and strengthen capacity for sustainable water resources development and management through education, research, consultancy and knowledge dissemination. ① CWR also facilitate coordinate, collaborate, cooperate among universities, research institutes & centres at national, regional and international levels. ① It also promotes integrated research system and multi-interdisciplinary approach. ① UNESCO-CWR serves the local, regional “the Nile Basin, Eastern, Central Africa and Shared Aquifers” AWA International water community.

Title:	15. Ulugbek UNESCO Chair on Physics and Astronomy.
Presenter:	Prof. Dr. B. Fayzullaev, Department of Physics, National University of Uzbekistan.
Summary:	<p>This presentation covered the following main points:</p> <ul style="list-style-type: none"> ① The Ulugbek UNESCO Chair promotes an integrated system of research, training, information and documentation in the field of Physics and Astronomy. ① Development of the integration into postgraduate study programmes of new information and communication technologies. ① Publication of new curricular materials in the field of Physics and Astronomy. ① Organization of scientific conference and round-table discussions. ① The Ulugbek UNESCO Chair is acting in close cooperation with Nuclear and Theoretical Physics Chair of Department of Physics, the Uzbekistan National University, Tashkent. Many courses are delivered jointly for common students. The UNESCO Chair invites international speakers to give talks at common seminars.

The second day of the workshop included a dialogue session, with breakout group discussions where each group discussed on the assigned topic and presented findings of their group deliberations. Three groups were formed for that purposes.

The topics assigned to the groups were:

1. Developing a UNESCO Family Strategic Plan for Asia and the Pacific,
2. Scoping UNESCO Chairs in Malaysia; and
3. Delivering together.

The group discussion was guided by a series of questions based on the topics assigned to each group.

The full reports of the group discussion are given in the Appendix 3.

GROUP 1: Developing a UNESCO Family Strategic Plan for Asia and the Pacific.

QUESTION 1: Which are the strengths of UNESCO and its Natural Sciences Family in Asia and the Pacific?

The Centres and Chairs under Natural Sciences Family are focused on very important issues relevant to the society and environment. The fields in which these Centres and Chairs focus include natural disasters, hydrology, food security, water resources, water and culture, eco-hydrology, ground water, oceanography, biology and etc.

Members of this discussion group suggested organizing a Regional Steering Committee meeting (RSC) every year hosted by member countries (International Hydrological Programme (IHP), National Committee and Category 2) and presentation of reports and cross cutting programmes (e.g. ASIAPACIFIC FRIEND, HELP BASIN, UNESCO SWITCH-URBAN WATER MANAGEMENT, INTEGRATED WATER RESOURCE MANAGEMENT (IWRM) POST 2015).

In addition, UNESCO Jakarta office has an important role to assist in creating more collaborative programmes and activities in knowledge sharing on scientific research and sustainable development between UNESCO Category 2 Centres and Chairs and their stakeholders. There were consensus of building networks for strengthening partnership between the UNESCO Centres in Asia and the Pacific with the Malaysian scientific network. This collaboration will result in funds raising strategies / funding mechanism and joint research activities among the partners (Paris Link).

QUESTION 2: How to build a strong and an efficient regional sciences network?

UNESCO Centres and Chairs shall utilize a variety of interactive tools and approaches to maintain a sustainable internal communication with sufficient frequency of updates between Asia and the Pacific regional science network.

Currently, UNESCO has developed an integrated collaborative platform for the UNESCO Water Network using existing UNESCO's UNESTREAM shared point based platform. This platform shall serve as the primary mechanism for sharing feedback, information, documents and news within the network.

The establishment of groups of professionals in diverse fields of natural sciences will allow members of Centre and Chairs to remain up-to-date and encourage collaboration within these networks, e.g. International Hydrological Programme (IHP), Intergovernmental Oceanographic Commission (IOC), Man and the Biosphere Programme (MAB). An active participation in this common communication platform is highly encouraged to ensure timely updates and content quality.

The group discussion also suggested setting up twinning programmes between Chairs and Centres with the aim of advanced research, training and programme development, e.g. Integrated Water Resource Management (IWRM) which will promote remote sensing application to climate change studies within Southeast Asia countries and China. This initiative will encourage cooperation through transfer of knowledge across borders.

Centres could also facilitate and organize national and regional training, short courses and knowledge sharing workshop that can essentially strengthen particular fields by training human resources and applying state-of-the-art technologies and tools, e.g. training the field of eco-hydrology.

Staff Exchange programme was also suggested since it has always built bridges between disciplines and the scientists. The exchange will aim to stimulate cutting edge research and sharing scientific knowledge.

Collaborative engagement in enhancing communication and information sharing between members is important especially to maintain a high level of engagement with members' stakeholders. It was suggested to make significant efforts to establish an effective communication channel, e.g. website to convey progress, exchange knowledge or success stories to adverse impact.

QUESTION 3: How can UNESCO support the Natural Sciences Category 2 Centres and Chairs?

UNESCO has made significant efforts to facilitate collaboration with various UN Agencies such as Intergovernmental Panel on Climate Change (IPCC), United Nations Development Programme (UNDP) and other UN Programmes.

The Centres and Chairs expressed a desire to network and collaborate with one another and expressed interest in establishing a mechanism for cooperation. They would like to see UNESCO take a leading role in bringing them together, so they can further develop cooperation mechanism between themselves and increase the visibility of their partnership. This however has a cost implication, so funding mechanisms need to be explored.

GROUP 2: SCOPING UNESCO CHAIRS IN MALAYSIA.

QUESTION 1: Which are the key strengths of Malaysian science stakeholders?

This group mainly discussed on the strengths and weaknesses of UNESCO Natural Sciences Centres and Chairs in Malaysia. The group categorized different fields of natural sciences research according to the strengths and the weaknesses of the Malaysian stakeholders. The Malaysian stakeholders have reasonably good exposure to few areas including sustainable energy, water resources, climate change, disaster risk reduction, urban environment, ecological economics and water-energy-food nexus.

The group agreed that Malaysia is relatively competent in water resource management and climate change. In water resource management, Malaysia has numerous government agencies including Department of Irrigation and Drainage (DID), Economic Affairs Unit (UPEN), Ministry of Energy, Green Energy and Water (KETTHA), National Water Services Commission (SPAN) who work hand-in-hand with water companies e.g. Syarikat Bekalan Air Selangor Sdn. Bhd. (SYABAS) etc.

As for climate change, strong collaborations exist among universities (Universiti Teknologi Malaysia (UTM), Universiti Kebangsaan Malaysia (UKM), Universiti Sains Malaysia (USM), Universiti Malaya (UM) and Universiti Malaysia Terengganu (UMT)), Malaysian Meteorological Department, National Hydraulic Research Institute of Malaysia (NAHRIM), the Ministry of Natural Resources and Environment (MNRE) and Ministry of Energy, Green Energy and Water (KETTHA).

QUESTION 2: How can Malaysia contribute to a strong and efficient regional science network?

Strategic partnership with UNESCO family centres (e.g. Category 2 Centres) should be established or enhanced to enable higher level of knowledge exchange, resources sharing and human capital development. Such efforts will result in more significant achievements in addition to wider coverage of activities and collaboration.

The deliberation of this group also resulted in suggestions of having a clear and generic strategy that should be based on multidisciplinary, problem-solving and outcome-based approach at local and regional levels. They also highlighted that the academic institutions have an active and leading role in solving natural resources problems and the solutions can be in line with Malaysian Higher Education Blueprint-2015 by emphasizing on the quadruple helix.

The group also demanded for establishing and implementing a Sustainability Science Network and programme across region. Ultimately, all collaborations, networking, strategies and activities must be in line with SDGs to ensure effective outcome on regional and global scale.

QUESTION 3: How can UNESCO Natural Sciences family support Malaysian stakeholders to deliver the Post 2015 Development Agenda?

UNESCO Science family can support through development and implementation of Sustainable Sciences Network across region and programme. Furthermore, the UNESCO family can act as a “big brother” to bring together existing centres and chairs to promote cooperation especially in the form of technology and knowledge transfer.

Funding is also essential, not only to the Malaysian stakeholders but also to other parties in which the UNESCO Science family can support by facilitating funding mechanism.

GROUP 3: DELIVERING TOGETHER

Question 1: What are the key areas for cooperation in Sciences in the Post-2015 Development Agenda framework?

There are four key areas to be focused on. The first one is biodiversity and ecology conservation. With intense development, loss of biodiversity and ecology are inevitable. However, critical areas for biodiversity and ecology protection should be identified and protected. The cooperation in this aspect should inform stakeholders and policy makers in the importance of conserving such areas, leading to a more sustainable development.

Next is the renewable energy. In years to come, traditional energy sources such as petroleum and coal would be depreciated and before that happens, renewable energy should receive utmost attention. The cooperation in this area should be amplified and promoted as the next evolution of energy sources, not just alternative. Such effort would also enable technological transfer to help achieve renewable energy target. Renewable energy should be marketed as affordable, reliable, sustainable and modern energy for all.

Transboundary water is also an important issue to be highlighted. The issue become very complicated when there is more than one country claiming rights to water sources (especially lake and river water basin). Transboundary cooperation should exist to solve the issue without political influence and violence.

A larger entity such as a river commission could be established to hold talks, draft legal agreements and discuss this transboundary issue for the sake of survival.

The last issue is food security and livelihoods. Specific projects need to address food security and livelihood issues especially concerning rural communities. Critical issues that directly related to food security such as food source availability, clean water access and power (energy) access need to be investigated. However, food production should not only address the issue of demands but also retain the essential ecological integrity of production systems.

Question 2: How to implement joint activities in sciences to support the SDGs?

Action plans should be devised in broader coverage to reach the goals of SDGs. Among those shortlisted were research activities, community programmes and education programmes. Such activities or programmes should be knowledge transfer programmes so that it would be a win-win scenario for the different parties. For example, research in water quality issue would improve the livelihood of the community. The governance aspect should also be emphasized. For example, awareness programme specifically for women and youth, as well as gender equality. Apart from professional, women and youth should be engaged in community-based sciences to increase the awareness and also knowledge. A specific web portal should also be established to act as knowledge centre and particularly as a gateway to connect to the modern youth. Massive open online course (MOOCs) should also be encouraged as part of the freely available education for the masses.

Question 3: How to link Asia and the Pacific with Africa to support South-South cooperation in Sciences?

The most important aspect to link between these different entities is the structural arrangement (committees). Such solid structure should include secretariat and/or taskforce for joint cooperation. The establishment of these secretariat with representative from each regions of interest will ensure seamless and more efficient “bring-it-together” collaborative efforts.

To ensure accurate and up-to-date information dissemination, a web portal should be available and frequently updated so that all participants in all regions are aware of such efforts and activities. With proper support and promotion, this portal will even reach out to more potential participants (visibility) and collaborators, especially from untapped regions or countries.

CONCLUSIONS AND RECOMMENDATIONS

- The current 15 UNESCO Natural Sciences related Category 2 Centres and 28 UNESCO Natural Sciences related Chairs in Asia and the Pacific Region are focusing on very important issues relevant to the society and environment. The fields in which these Centres and Chairs are focusing include: historical hydraulic structures, humid tropic hydrology and water resources, ecohydrology, urban water management, erosion and sedimentation, biotechnology, space technologies for cultural and natural heritage, geochemistry and others. These Centres and Chairs are aligned with the 17 SDGs, e.g. poverty reduction, food security, education quality, gender equity, sustainable management of water, affordable energy, sustainable economic growth, sustainable industrialization, resilient and sustainable cities, ecosystem protection, and global partnership.
- The workshop successfully achieved the targets of creating more collaborative programmes and activities of knowledge sharing on scientific research and sustainable development between UNESCO Category 2 Centres and Chairs. There was consensus of building networks for strengthening partnerships between the UNESCO Centres in Asia-Pacific, Africa and the Malaysian scientific network. This collaboration will result in fund raising strategies and joint research activities among the partners. It was agreed that the investment in science, food and water security, renewable energy, water and natural resources management, disaster risk reduction and resilience to climate change will achieve regional and global peace and prosperity. It is revealed that the UNESCO Centres and Chairs are coordinating in implementing the collaborative research projects and studies with regional, federal and local authorities as well as with the private sector. The individual sectors and the society as whole are the main beneficiaries of the joint projects completed under these Centres and Chairs. However, few regions and countries are still lacking of such platforms where joint research and collaborative projects can be carried out and benefits can be transferred to the society and individual sectors. Some of the areas of research identified in the workshop include disaster risk reduction and management, sustainability science and water demand management.

- There was a suggestion on creating a new Chair in Malaysia regarding Disaster Risk Reduction and Management (DRRM). The government is concerned about different types of disasters like flood, landslide, earthquake, tsunami and the associated of those disasters in Malaysia. The proposed Chair will be the most effective response to mitigate any types of catastrophe in Malaysia through collaboration among the different Centres and Chairs in South-South cooperation.

Practice of reducing disaster risks can be done through systematic efforts by collaboration and research among the different Chairs of UNESCO worldwide. Reducing exposure to hazards, lessening vulnerability of people and property, wise management of land and other natural resources, improving preparedness and early warning for the natural disaster events can be achieved by strong relationship of South-South cooperation.

- It was also suggested to create a new Category 2 Centre in Malaysia on Sustainability Science (CMSS). UNESCO Natural Sciences Family can support the Malaysian science stakeholders by developing and implementing a sustainability science network and programme across region, by promoting cooperation with existing Centres and Chairs by technology and knowledge transfer and by facilitating funding mechanisms. It is thus, recommended to have a UNESCO Category 2 Centre on Sustainability Science in Malaysia.

The proposed Centre can be established in Malaysia for developing joint projects with the existing Regional Centres and the Malaysian scientific network. Sustainability science is an emerging field of interdisciplinary research that fosters shared prosperity and poverty alleviation while protecting the environment. This field draws from multiple disciplines of the natural, social, medical and engineering sciences, from the professions and from practical field experience in business, government, and civil society.

- Final Recommendations and contribution to the “Kuala Lumpur Statement”:
1. The UNESCO Natural Sciences related Category 2 Centres and Chairs in Asia and the Pacific Region are highly encouraged to build a strong regional science network to promote interaction, knowledge sharing and joint activities.
 - A good example is the cooperation between ISTIC (Malaysia) and IRIS (Iran) in technopreneurship training for research scientists and engineers, in Iran in 2015.
 - Iranian UNESCO chairs and centres will create a web-based network for coordination and cooperation between them, including periodic meetings to find common fields of interest and define joint projects. If this model works in Iran, it will be expanded to UNESCO centres and chairs the other regions.
 2. The network of UNESCO Natural Sciences related Category 2 Centres and Chairs in Asia and the Pacific region will encourage active links with Africa to strengthen the South-South and triangular cooperation in STI.
 - For example HTCKL (Malaysia) and RC-IRBM (Nigeria) active engagement and joint programmes on water resources management.
 3. The UNESCO Regional Science Bureau for Asia and the Pacific will continue to mobilize and provide necessary support to the UNESCO’s Natural Sciences family in the region for the successful delivery of the Sustainable Development Goals in the Post-2015.

APPENDIX 1 - Workshop Programme

The Workshop Programme is as follows:

Day 1: 26 May 2015		
12 :30 -13.30	Registration and lunch at Taman Sari Outlet	
[Session 1] Opening		
13:30 – 14:30	Opening, welcome remarks and Souvenir Presentation	<ol style="list-style-type: none"> 1. Dato Ir. Lee Yee Cheong, Chairman, ISTIC Governing Board 2. Prof. Mohamed H. A. Hassan, Chairman, Council of the United Nations University (UNU) 3. Prof. Dr. Ahmad Fauzi Ismail, Deputy Vice Chancellor (Research and Innovation) Universiti Teknologi Malaysia 4. Mr. Shahbaz Khan, OIC UNESCO Office Jakarta 5. Mr. Mohd Khairul Adib bin Abdul Rahman, Secretary General of The Malaysian National Commission for UNESCO
[Session 2] Setting the scene		
14:30-14:45	UNESCO Natural Sciences Regional Support Strategy 2014-2021	Mr. Shahbaz Khan, OIC UNESCO Office, Jakarta
14:45-15:00	Malaysian Higher Education Blueprint	Prof. Dato' Ir. Dr. Mohd Saleh Jaafar, Adviser / Consultant on Malaysia Higher Education Blueprint
15:00-15:15	Post-2015 Development Agenda and STI	Dato Ir. Lee Yee Cheong, Chairman, ISTIC Governing Board
15:15-15:45	Group photo and <i>Coffee break at Urban Hotel Lobby</i>	
[Session 3] Introduction to UNESCO Category 2 Centres		
15:45-17:00	Presentations from Directors of UNESCO Category 2 Centres for Natural Sciences	Dato Samsudin, ISTIC, Malaysia Ms Jie, HIST, China Mr Labbaf, ICQHS, Iran Dr Yaya, RC-IRBM, Nigeria Mr Harjono, APCE, Indonesia Dr Chang, IKGEST, China Dr Khakbaz, IRIS, Iran Mr Lekoomet, KEWI, Kenya Dr Roseli, HTCKL, Malaysia

[Session 4] Introduction to UNESCO Chairs		
17:00-17:50	Presentations from UNESCO Chairs for Natural Sciences	Dr Pachauri, India Dr Matsumoto, Japan Prof. Sarrafzadeh, Iran Dr Kesavan, India Dr Kantoush, Sudan Dr Fayzullaev, Uzbekistan
17:50-18:30	Q&A Discussion	
20:00	<i>Welcome Dinner at Mahkota 3 (Istana Hotel)</i>	<i>By UTM</i>

Day 2: 27 May 2015		
08:00-08:30	<i>Arrival and installation at Safir (1) meeting room</i>	
[Session 5] Breakout Dialogue		
08:30-09:30	1. Developing a UNESCO Natural Sciences Family Strategic Plan for Asia and the Pacific 2. Scoping UNESCO Chairs and Category 2 Centres in Malaysia 3. Delivering Together	Moderators: 1. Prof. Dr. Zulkifli Yusop (UTM) 2. Prof. Dr. Arshad Ahmad (UTM) 3. Assoc. Prof. Dr Marlinda (UNITEN)
09:30-10:00	Reporting from Breakout Dialogue	Rapporteurs from each breakout discussion 1. Assoc. Prof. Dr. Sharif Moniruzzaman Shirazi (UTM) 2. Dr. Noorul Hassan Zardari (UTM) 3. Assoc. Prof. Dr. Shareeshivadasan A/L Chelliapan (UTM)
10:00-10:15	<i>Coffee break at Safir Foyer</i>	
[Session 6] Key-findings		
10:15-11:00	Discussion	Moderator Prof. Dr. Zulkifli Yusop, UTM
[Session 7] Closing		
11:00-11:10	Conclusions: Plan of action and follow-up	Mr. Shahbaz Khan, OIC UNESCO Office, Jakarta
11:10-11:30	Closing Remarks	1. Dr. Mohamed Roseli Zainal Abidin, Director of Humid Tropics Centre, Kuala Lumpur (HTCKL) 2. Flavia Schlegel, UNESCO Assistant Director General for Natural Sciences
12:00	<i>Lunch at Taman Sari Outlet</i>	

APPENDIX 2 – Concept note

Promoting Interaction and Knowledge Exchange between UNESCO Natural Sciences related Centres and Chairs in Asia and the Pacific

Background

The current year 2015 is a critical moment globally for the transition into the Post-2015 Development Agenda as new framework for global development efforts. With the mandate to promote International cooperation in education, the sciences, culture, communication and information, UNESCO's contribution to the Post-2015 Development Agenda is essential. UNESCO is mobilizing all its strengths for building the sustainable, inclusive, knowledge societies needed for the century ahead.

The draft of the Sustainable Development Goals (SDG) 'outcome document' includes 17 goals and 169 targets, where the universality of Science and its critical role for poverty eradication and sustainable development has been highlighted. As stated by the UNESCO Director-General in the High Level Segment of ECOSOC, "*investment in science is investment in food and water security, renewable energy, disaster risk reduction and resilience to climate change. It is about peace and prosperity for all.*" Moreover, networking will be critical in the implementation of the Post-2015 Development Agenda, since the proposed SDG no. 17 refers to "strengthen the means of implementation and revitalize the global partnership for sustainable development".

The programmes of UNESCO in Natural Sciences have been able to expand their cooperation beyond the network of the traditional intermediaries – what may be called the "UNESCO Natural Sciences family": National Commissions, UNESCO Chairs, Category 2 Institutes and Centres, clubs and associations, National Committees of intergovernmental programmes and specialized networks, such as the Associated Schools Project Network. Within this variety of partners, Category 2 Centres and Chairs play an important role as they expand the capacities and effectiveness to carry out activities, promote the outreach, impact and visibility at all levels, broaden the support base and mobilize resources and create synergies among all communities of UNESCO.

UNESCO Category 2 Centres and Chairs are independent of UNESCO and are associated with the Organization through individual arrangements, as approved by the UNESCO governing body - the General Conference -. These Centres and Chairs perform research, advanced training, contribute to the execution of UNESCO's programmes and increase the participation of national and regional institutions in UNESCO's work.

In Asia-Pacific Region, the Category 2 Centres and Chairs have the capacity to provide a tangible contribution towards the realization of not only 'Natural Sciences' objectives and priorities as stated in the UNESCO Medium Term Strategy but also towards the implementation of the SDGs in the Post-2015 framework. The Category 2 Centres and Chairs can contribute by expanding and strengthening the UNESCO's global and regional outreach, and providing a collective impact, given the competencies, scope of expertise, as well as training opportunities that they offer. Their dissemination is also an added value to strengthen North-South, South-South and triangular cooperation.

Scope of the workshop

This workshop is organized in order to promote interaction and knowledge exchange for strengthening South-South cooperation between Natural Sciences Category 2 Centres and Chairs in the Asia-Pacific region. A strong and efficient Science network in the region will be critical to support the implementation of the Post-2015 Development Agenda in the upcoming years.

The following actions will be the outcomes of the workshop:

- Providing an overview of UNESCO's Medium Term Strategy globally and the Regional Bureau's Science Support Strategy in the Asia-Pacific (2014-2021).
- Providing an overview of UNESCO's Natural Sciences Category 2 Centres and Chairs in Asia-Pacific and their contribution to programmes and activities of UNESCO in the Post-2015 Development Agenda framework.
- Identify potential gaps and overlaps among the Centres and Chairs.
- Identify formats for collaboration and knowledge exchange on science research and sustainable development.
- Building networks for strengthening partnerships between the Category 2 Centres and Chairs in Asia-Pacific and Africa.
- Initiate reflection for the development of a regional strategy on funds raising and joint actions to support the Post-2015 Development Agenda.

This workshop is organized with the valuable support of the Malaysian Funds-in-Trust.

APPENDIX 3 – Outcomes from Breakout Discussion

GROUP 1: Developing a Strategic Plan for UNESCO Natural Sciences Family in Asia and the Pacific

<p style="text-align: center;">Regional Workshop "PROMOTING INTERACTION AND KNOWLEDGE EXCHANGE BETWEEN UNESCO NATURAL SCIENCES RELATED CENTRES AND CHAIRS IN ASIA AND THE PACIFIC" 27th May 2015 Group 1 Developing a Strategic Plan for UNESCO Natural Sciences Family in Asia and the Pacific</p>	<p>Which are the strengths of UNESCO and its natural sciences family in Asia and the Pacific?</p> <ol style="list-style-type: none"> 1. Natural disaster, hydrology, food security, water resources, water and culture, eco-hydrology, ground water, oceanography, biology etc. 2. Regional Steering Committee meeting (RSC) every year hosted by member countries (national IHP, category 2) and presentation of report, cross cutting programmes e.g. ASIA PACIFIC FRIEND, HELP BASIN, UNESCO SWITCH-URBAN WATER MANAGEMENT, IWRM POST 2015. 3. UNESCO JAKARTA OFFICE always communicate with member countries, funding to organise activities (Paris link). 4. Collaboration and networking programme with member countries.
<p>How to build a strong and efficient regional sciences network?</p> <ol style="list-style-type: none"> 1. Joining with UNESCO water collaborative platform – UNESTEAMS website 2. To categorise and network for diverse fields of natural sciences in special groups e.g. IOC, man and biosphere, IHP etc. 3. Twinning programme e.g. IWRM (e.g. Langat River Basin & Citarum River), Remote Sensing application to climate change studies within South-East Asia countries and China 4. To organize training and workshops for a particular field e.g. training on eco-hydrology 5. Ex-change programme between Natural Sciences Category 2 Centres and Chairs e.g. staff exchange 	<p>6. Special column for information sharing for the UNESCO website e.g. forum, activities, establishment of international knowledge centre</p> <p>How can UNESCO support the Natural Sciences Category 2 Centres and Chairs?</p> <ol style="list-style-type: none"> 1. UNESCO to facilitate the collaboration with various UN program e.g. water, IPCC, UNDP and other UN programme. 2. To set-up mechanisms to promote Natural Sciences Category 2 Centres and Chairs in Asia Pacific Region as a whole as well as exchanges among them. 3. To help explore the possibilities for collaborative research programme. 4. To fund some activities and networking.

GROUP 2: Scoping UNESCO Natural Sciences Centres and Chairs in Malaysia

<p style="text-align: center;">REGIONAL WORKSHOP Promoting Interaction and Knowledge Exchange between UNESCO Natural Sciences related Centres and Chairs in Asia and the Pacific 26-27 May 2015, Hotel Istana, KL SESSION 5: BREAKOUT DIALOGUE – 27 May 2015</p> <p>Group 2: Scoping UNESCO Natural Sciences Centers and Chairs in Malaysia</p> <p>Q-1: Which are the key strengths of Malaysian science stakeholders?</p> <p>Potential areas:</p> <ul style="list-style-type: none"> • Sustainable Energy • Water resource • Climate change • Disaster risk reduction • Urban environment • Ecological economics • Water-energy-food nexus, etc. 	<p>Group 2: Scoping UNESCO Natural Sciences Centers and Chairs in Malaysia</p> <p>Focus Areas:</p> <table border="1"> <thead> <tr> <th>Area</th> <th>Strength level</th> <th>Stakeholders</th> <th>Gap</th> <th>Action plan</th> </tr> </thead> <tbody> <tr> <td>Sustainable Energy</td> <td>Good</td> <td>SEDA, SETENA, EC</td> <td> <ul style="list-style-type: none"> • High dependency on coal and fuel, • Less than 1% renewable energy • No holistic policy </td> <td>PE, Energy efficiency program</td> </tr> <tr> <td>Water resource management</td> <td>Good</td> <td>ICD, UPEL, GETTH, SPAH, Water companies</td> <td> <ul style="list-style-type: none"> • Weak in demand management, • Poor in recycling and reuse, • High lobby • Poor state and federal coordination, • Environment versus economic </td> <td>Regional WRS study, R&D Policy, NPL, WERS</td> </tr> <tr> <td>Climate change</td> <td>Good</td> <td>Interagency, IANRIS, MAMBI, GETTH, Universities</td> <td> <ul style="list-style-type: none"> • Low awareness • Lack of resources for adaptation, mitigation and policy implementation • Lack of technology </td> <td>IPCC Professor for Malaysia Climate change policy for Malaysia</td> </tr> <tr> <td>Disaster risk reduction and management</td> <td>Good</td> <td>NSC (MAM)</td> <td>To be discussed and listed later</td> <td></td> </tr> <tr> <td>Ecological economics</td> <td>Good</td> <td>University</td> <td>To be discussed and listed later</td> <td></td> </tr> <tr> <td>Urban Environment</td> <td>Moderate</td> <td></td> <td>To be discussed and listed later</td> <td></td> </tr> </tbody> </table>	Area	Strength level	Stakeholders	Gap	Action plan	Sustainable Energy	Good	SEDA, SETENA, EC	<ul style="list-style-type: none"> • High dependency on coal and fuel, • Less than 1% renewable energy • No holistic policy 	PE, Energy efficiency program	Water resource management	Good	ICD, UPEL, GETTH, SPAH, Water companies	<ul style="list-style-type: none"> • Weak in demand management, • Poor in recycling and reuse, • High lobby • Poor state and federal coordination, • Environment versus economic 	Regional WRS study, R&D Policy, NPL, WERS	Climate change	Good	Interagency, IANRIS, MAMBI, GETTH, Universities	<ul style="list-style-type: none"> • Low awareness • Lack of resources for adaptation, mitigation and policy implementation • Lack of technology 	IPCC Professor for Malaysia Climate change policy for Malaysia	Disaster risk reduction and management	Good	NSC (MAM)	To be discussed and listed later		Ecological economics	Good	University	To be discussed and listed later		Urban Environment	Moderate		To be discussed and listed later

APPENDIX 6

Presentation on International Science, Technology and Innovation Centre for South-South Cooperation Under The Auspices of UNESCO by Dato Dr. Samsudin Tugirman, Director of ISTIC, Malaysia

ISTIC Programmes

Under the Overarching Framework of UN Millennium Development Goals (MDG), UN Sustainable Development Goals (SDG) and WSSD WEHAB (Water, Energy, Health, Agricultural and Biodiversity Management), ISTIC has emphasized on institutional and Human Resources Capacity Building in South Countries.

ISTIC Priority Programmes:

- STI Policy, emphasized national STI Policy formulation implementation and monitoring, including the role of women
- Inquiry Based Science Education (IBSE) and Science, Technology, Engineering and Mathematics (STEM) Education;
- Women in STI
- Maintenance of Infrastructure
- Technopreneurship

Rationale for ISTIC Priority Programmes

>STI Policy
Many South countries do not have STI Policy to guide national development, those that have do not pay enough attention to SMEs and women. ISTIC Partners: Karan Institute for S&T Policy Evaluation and Planning (KISTEP), UTM Pantana School

>Women in STI
Many South countries do not have policies on contribution of women in national development. ISTIC Partners: NAM Institute for Empowerment of Women (NIEW), UN Women

>Maintenance of Infrastructure
Infrastructure projects abound in the developing world, but there is little indigenous capacity to maintain them in good working order. ISTIC Partner: Engineering Staff College of India (ESCI) Hyderabad, Institute of Engineers Malaysia (IEM)

>Technopreneurship
Researchers need training in grant application writing and business plan formulation. ISTIC Partner : USAINS, University of Science Malaysia, MTDC

>Inquiry Based Science Education (IBSE)
Assuring the supply pipeline of creative and discerning STI professionals. ISTIC Partners: IAP SEP Council, Fondation La main à la pâte, France

ISTIC Programmes As of April 2015

Programme	Request Count	Participants	Coordinators	Partners
STI Policy	10	480	17	KISTEP, PAPC, MOSTI, RESCO, IOR
Women in STI	2	300	33	NIEW, UNICEF
IBSE / STEM	10	504	12	LAMAP, RESAM, FUS, IAP SEP Council, MOE, Malaysia NatCom, QSTEP in Science
Maintenance of Infrastructure	9	323	30	ESCI, IEM, CSIR, IRI, ERFI, COEIN
Technopreneurship	12	300	10	USAINS, NAIM, FUS, IEM, CARSCIENCE, NICTE, MTDC, KICP
Workshops to STI / UNESCO	3	130	80	Malaysian Permanent Delegation to UNESCO & UNESCO Paris
ISTIC 5 th Anniversary Conference	1	200	87	MOSTI, MOE, NatCom, IEM, USAINS, IOR, IAP
	52	2434		

KISTEP - Karan Institute for S&T Policy Evaluation and Planning
 PAPC - PAMBA Asia-Pacific Computing, Malaysia
 TMAA - The Third Academy of Sciences, Italy
 NIEW - NAM Institute for Empowerment of Women, Malaysia
 LAMAP - La Main à la Pâte Foundation, France
 RESAM - Regional Centre for Education in Science and Mathematics
 IEM - Institute of Engineers Malaysia
 IOR - The Institute of Engineers, Oman
 NAIM - National Institute for Scientific Research
 CARSCIENCE - The Network of HCI Institutions in the Asia-Pacific Region
 MTDC - Malaysian Technology Development Corporation
 COEIN - Contribution to Early Development Board, Indonesia
 USAINS - University of Science Malaysia, Malaysia
 FUS - Fuzhou University, China
 NICTE - National Center of Science, Technology and Innovation, Thailand
 MOE - Ministry of Education, Malaysia
 NICTE - National Center of Science and Technology, Thailand
 IAP - Inquiry Based Science Education
 IEM - Institute of Engineers, Malaysia
 IOR - Institute of Engineers, Oman
 QSTEP in Science - RESCO (IAP SEP Council), Indonesia
 NAIM - National Institute for Scientific Research
 NICTE - National Center of Science and Technology Evaluation

25-26 May 2015

ISTIC Programmes 2015

STI Policy
ISTIC Certified Training Programme on Science, Technology and Innovation (STI) Policy and Management for Developing Countries (ICPS)
17-24 August 2015, Kuala Lumpur, Malaysia

KISTEP-ISTIC Science and Technology Policy Programme for High Level Policy Maker
23-27 November 2015, Jeju Island, Korea

Technopreneurship
Training Workshop on Technopreneurship for Latin American Countries
16-20 March 2015, Quito, Ecuador

Training Workshop on Technopreneurship for South Countries
5-9 October 2015, Kuala Lumpur, Malaysia

ISTIC-TWAS STI Competition "Successful Innovation in Science & Technology in Developing Countries"
10-11 October 2015, Kuala Lumpur, Malaysia

Maintenance of Infrastructure
Training Workshop on Maintenance of Infrastructure
30 March - 2 April 2015, Kuala Lumpur, Malaysia

ISTIC Programmes 2015

Inquiry-Based Science Education (IBSE)
Training Workshop on Developing Thinking Skills in Science Education for Sustainable Development
14-18 September 2015, Bogor, Indonesia

Training Workshop on Innovative Teaching & Learning of Science through IBSE for Teacher Trainers
26-30 October 2015, Negeri Sembilan, Malaysia

Women in Science, Technology and Innovation
Training Workshop on Developing Women's Talents in the Science, Technology and Innovation
3-8 August 2015, Kuala Lumpur, Malaysia

Briefing to Permanent Delegation to UNESCO 2015
Briefing to Permanent Delegation to UNESCO Paris,
8-10 September 2015, Paris, France

Collaboration with the Category-2 Centre

- ISTIC looks forward to strategic collaboration with other Category-2 Centres of UNESCO.
- Collaboration on win-win basis, sharing of resources
- Recommend/Propose relevant participants to participate in ISTIC programmes.
- Currently we are establishing collaboration with IRIS (Isfahan Regional Center for Technology Incubators and Science Parks Development, under the auspices of UNESCO)

RECOGNITION

French Development Bank Highlighting ISTIC

For Malaysia, ISTIC represents a symbolic recognition of its singular political position and the quality of its training institutions among myriad innovation-oriented governmental agencies – from small and medium enterprises (SME) to local government administrations.

Malaysia's prominence also proves strategic for UNESCO: the country is an excellent interlocutor for multilateral cooperation with the South.

According to UNESCO's Director General, I. Bokova, "Malaysia has made science, technology and innovation a cornerstone of its development strategy." UNESCO's global recognition of Malaysia's distinctive South-South cooperation has great value for this emerging country.

"We are small, but we continue to harbour very big dreams," commented Dr. Lee 'Wee Cheong, Chairman of the governing board of ISTIC at the institution's 8th anniversary ceremony in May 2013.

APPENDIX 7

Presentation on “Space Technology: A Powerful Tool for Smart Management of UNESCO Properties”

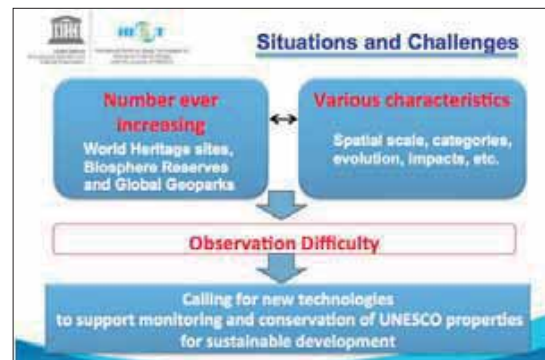

by

Ms Liu Jie, International Centre on Space Technology for Natural and Cultural Heritage under the auspices of UNESCO (HIST), China

**Space Technology:
A Powerful Tool for Smart Management
of UNESCO Properties**

LIU Jie

May 26, 2015 Kuala Lumpur, Malaysia

Open Initiative

In 2001, UNESCO and ESA jointly launched the "Open Initiative on the use of space technologies to support the World Heritage Convention".

The Main Goals:

1. Space for World Heritage sites (From Space 2 Place)
2. Space for the people managing the sites (Space 4 People)
3. Space for our young generation (Space 4 Young Generation)

2. HIST: A New Platform for UNESCO Properties

On 24 July, 2011, the International Centre on Space Technologies for Natural and Cultural Heritage under the auspices of UNESCO was established in Beijing.

The center is hosted by and built on the premises of Institute of Remote Sensing and Digital Earth (IIRADI). Its aim is to provide technical services to UNESCO and its less developed member states on using space technologies for UNESCO properties, namely World Heritage Sites, World Biosphere Reserves and Global Geoparks.

Institute of Remote Sensing and Digital Earth (IIRADI), Chinese Academy of Sciences

IIRADI is one of the world's best Earth Observation Institutions. Staffed by 1200 researchers and graduate students, it possesses large scientific facilities, including two remote sensing airplanes and three satellite ground stations, able to receive satellite remote sensing data that geographically cover 70% of Asia.

Hosting Institute

RADI Ground Stations

European Countries	ESA: LANDSAT, LANDSAT
	SPOT Images: SPOT-1, SPOT-2, SPOT-3, SPOT-4
	HRV: RADARSAT-1, RADARSAT-2
Asia	CS: Beidou: CRES-01, CRES-02, CRES-03
	CS: DMR: DQ-1A, DQ-1B
	Beidou: EY-01C, EY-01
	Tai: SH-1A, SH-1B
USA	ESA & NASA: DQ-1C

2.5M scenes, 300TB

Tasks of HIST

- **Scientific Research:** Assisting developing countries with space technologies to improve their capacity for the conservation, management and sustainable development of World Heritage.
- **Capacity Building:** help developing countries' policy makers and practitioners to strengthen capacity building on the use of space technologies for better conservation and management of the properties;
- **Education and Publicity:** The research results will be used for education and publicity.

Atlas of Remote Sensing for World Heritage: China

Fine Observation for Giant Panda Habitats and Amazon

Amazon River mouth region

Smart Management of Cultural Heritage Sites in Italy and China

Land subsidence in Luoyang City

Hangu Gate by Terrestrial LIDAR

Lonomen Grottoes 3D modeling

Suspected relics along Silk Road

Remote Sensing for Environment of Angkor Site

MOU between HIST and APSARA during the 37th session of the UNESCO World Heritage Committee in Phnom Penh, June 2013

Cambodian Deputy Prime Minister H. E. Dr. Sok An met with the HIST/RADI delegation

Angkor Site and its environment

Low-cost "virtual ground station" for Smart Management

- > 2Mbit/s internet connection
- > few computers and a large monitor or TV screen
- > Distributing real time quick-look imagery of high resolution satellite

RADI's three stations receive data from satellites covering 70% of Asia

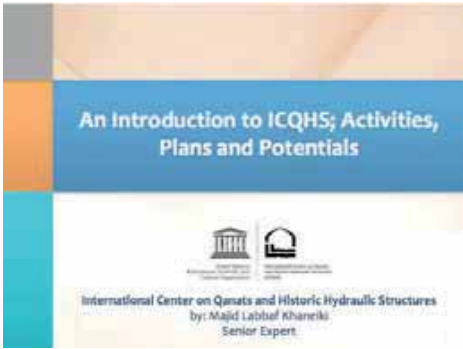

Installed in Kirgizstan, Mongolia, Beijing, and Canada.

Capacity Building

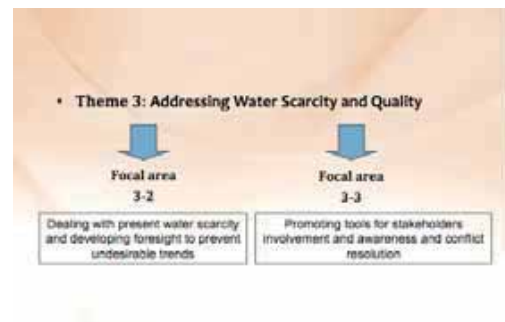

October 2012, the 1st International Workshop on Space Technologies for Management and Conservation of World Heritage took place in Beijing. 20 people from 15 developing countries in Asia participated in the Workshop.

APPENDIX 8

Presentation on “An Introduction to ICQHS Activities, Plans and Potentials” by Mr Majid Labbaf Khaneiki, International Centre on Qanat and Historic Hydraulic Structures (ICQHS), Iran

 <p>An Introduction to ICQHS; Activities, Plans and Potentials</p> <p>International Center on Qanats and Historic Hydraulic Structures by: Majid Labbaf Khaneiki Senior Expert.</p>	<p>Inauguration of ICQHS building August 14, 2006</p> <ul style="list-style-type: none"> • Inaugurating the ICQHS' building • Setting up the Qanat website: www.qanat.info 
<p>Main missions of ICQHS:</p> <p>Recognition, transfer of knowledge and experiences, promotion of information and capacities to all the aspects of Qanat technology and other historic hydraulic structures to fulfil sustainable development of water resources</p> 	 <pre> graph TD UNESCO(UNESCO) <--> ICQHS(ICQHS) ICQHS <--> Society(Society) ICQHS <--> HostGovernment(Host Government) Society <--> HostGovernment </pre>
<p>We are focused on:</p> <ul style="list-style-type: none"> • Research • Training • Technology Transfer • Scientific Gathering • Publication 	<p>Research Projects of the Center</p> <ul style="list-style-type: none"> • Study on the Destructive Impacts of the Developmental Programs on Qanats • Feasibility of Generation of Electricity out of Qanat Water Current • New Methods for Building and Maintaining Qanats • Methodology of Preparing Qanat Atlas with the Aid of GIS

<h3>Holding Training Courses</h3> <p>Qanat Training Center</p> 	<h3>Holding Training Courses</h3> <ul style="list-style-type: none"> • Training course on historic hydraulic structures • Training course on qanat technology – stage 1 • Training course on qanat technology – stage 2 
<h3>Holding Training Courses</h3> <ul style="list-style-type: none"> • Training course to acquaint the consulting engineers with nomination of historic hydraulic structures on the UNESCO world heritage list • International Training course on qanat • Training course on necessity of preservation of historic hydraulic structures 	<h3>Holding the Scientific Gatherings</h3> <p>International Conference on Traditional Knowledge for Water Resources Management</p> 
<h3>Publication</h3> <ul style="list-style-type: none"> • The book of "qanat from practitioners' point of view" • A survey on the qanats of Bam from engineering point of view • The book of Veins of Desert • Proceedings of the conference on transboundary waters and international laws (Persian version) 	<h3>Publication</h3> <ul style="list-style-type: none"> • The book of Kerman qanat practitioners • The book of Qanat in its Cradle • Proceedings of the international conference on traditional knowledge for water resources management 
<h3>Study Projects</h3> <ul style="list-style-type: none"> • Nomination of qanats of Iran on the UNESCO world heritage list <ul style="list-style-type: none"> ❑ Qanat of Qasab: Gonabad ❑ Qanat of Ebrahimabad: Arak ❑ Qanat of Yazvan and Moudabad: Tafah ❑ Qanat of Arvaneh: Ardistan ❑ Qanat of Wozn: Ardistan ❑ Qanat of Zarch: Yazd ❑ Qanat of Hassaneh: Yazd ❑ Qanat of Cohar-nis: Kerman ❑ Qanat of Aabarabad: Bam ❑ Qanat of Chambar abad and Sheykhi: Bam 	<h3>Study Projects</h3> <ul style="list-style-type: none"> • Compiling the school texts regarding qanat knowledge (acquainting the students with qanat heritage) • Preparing the comprehensive guidelines for determining the qanat buffer zone and setting out a relevant system • Documenting the information of the selected qanats of Yazd province • Incorporating the modern technologies into qanat construction • Preparing a methodology for qanat encyclopedia (In Persian and English) • Footprint of culture in the development and maintenance of qanats

- Potentials of ICQHS:**
- Holding workshops on preservation and maintenance of Qanat and other historic hydraulic structures and the lessons from which we can still learn to cope with such new problems as climate change
 - Holding training courses on the traditional water knowledge
 - Conducting research and study projects in cooperation with international organizations
 - Organizing field courses for university students at international level
 - Advising students' thesis
 - Holding short term courses on historic hydraulic structures in universities

Thank you for your attention

APPENDIX 9

Presentation on “Regional Centre for Integrated River Basin Management, Kaduna, Nigeria (A Category 2 UNESCO Water Centre)”

by

Dr. Omogbemi Omolajo Yaya, RC-IRBM, National Water Resource Institute, Nigeria

 <p>Dr OO Yaya RC-IRBM, National Water Resources Institute, Kaduna, Nigeria</p>	<h3>The Centre – Establishment</h3> <p>Dr OO Yaya: Brief on RC-IRBM</p> <ul style="list-style-type: none"> On 10th Nov, 2011, The 36th UNESCO General Conference formally approved the establishment of the Regional Centre for Integrated River Basin Management (RC-IRBM) in Nigeria as a Category II Centre under the auspices of UNESCO On 12th March, 2012, the Agreement between the Federal Government of Nigeria and UNESCO for the establishment and operation of the RC-IRBM was signed On 17th September, 2013, the Hon. Minister of Water Resources inaugurated the 7-man Governing Board of the Centre On 27th November, 2013, the Governing Board of the Centre appointed an interim Director and Secretariat of the Centre 
<h3>The Centre – Name, Location and Structure</h3> <p>Dr OO Yaya: Brief on RC-IRBM</p> <p>Name: Regional Centre for Integrated River Basin Management (RC-IRBM)</p>  <p>Host Institution: National Water Resources Institute, Kaduna, Nigeria (NWRI)</p>	<h3>The Centre – Vision, Mission and Objectives</h3> <p>Dr OO Yaya: Brief on RC-IRBM</p> <p>Vision: To be one of the foremost institutions for capacity building having responsibility for training and research activities, acquisition, archiving and analysis of data and dissemination of information for sustainable IRBM</p> <p>Mission: Promotion of effective and efficient IRBM of the Member States in the sub-region for sustainable water resources development, in collaboration with other UNESCO Water Centres</p> <p>Objectives:</p> <ol style="list-style-type: none"> Constitute a facilitator and synergistic structure providing the articulation of the different scientific and institutional stakeholders at local, national, regional and international levels, for the implementation of the IRBM particularly by facilitating interactions among and provide support to River Basin Development Authorities or Organizations in the West African region; Conduct and promote hydro-informatics, integrated water resources management and socio-economic research; and Provide IRBM training and tertiary education facility for water professionals and practitioners in the West African region.
<h3>The Centre – Core Functions and Key Activities</h3> <p>Dr OO Yaya: Brief on RC-IRBM</p> <p>Functions:</p> <ul style="list-style-type: none"> Coordinate the implementation of co-operative research projects and studies with regional, federal and local authorities, as well as private sectors; Build and run networking for information sharing, knowledge exchange and capacity-building in Member States of the West African region; Organize training courses, seminars, workshops and meetings; and Produce publications and disseminate information. <p>Key Activities:</p> <ol style="list-style-type: none"> IWRM Research and Training; Hydro-Informatics and Related Services; Institutional Framework Development; and Regional Cooperation and Partnership 	<h3>Some Activities of the Centre</h3> <p>Dr OO Yaya: Brief on RC-IRBM</p> <p>NWRI, as the host institution of RC-IRBM, has carried some activities for proper take-off of the Regional Centre:</p> <ol style="list-style-type: none"> To promote partnership and cooperation between the RC-IRBM and other UNESCO Water Centres and also to share their experience on the operations of UNESCO Category II Water Centre, NWRI has carried out peer visits to 3 Centres in 2011: <ol style="list-style-type: none"> UNESCO-IHE, Delft, The Netherlands (12th – 13th Nov., 2011), International Research and Training Centre for Erosion and Sedimentation, Beijing, China (20th – 24th Nov., 2011), and International Centre for Education, Capacity Building and Applied Research in Water Fruit, State of Minas Gerais – CEP (MG), Brazil (11th – 15th Dec., 2011).

Some Activities of the Centre

Dr OO Yaya: Brief on RC-IRBM

- Strengthen collaboration and partnership between Training and Research Institutions in Nigeria by supporting the activities of the National Water Resources Capacity Building Network (NWRCBNet);

University of Ilorin has started running the MSc. (IWRM) Curriculum developed by the Centre

Some Activities of the Centre

Dr OO Yaya: Brief on RC-IRBM

- Promoting and supporting multi-disciplinary and inter-agency studies on Reservoir Sedimentation, Downstream Impact Assessments and Development of Reservoir Operational Codes for Major Reservoirs in Nigeria;

Some Activities of the Centre

Dr OO Yaya: Brief on RC-IRBM

- Supporting WRM Training and Education through:
 - Hosting UNESCO-IHP "International Seminar on Modular Curriculum Development of Water Education for Integrated Water Resources Management" held from 28th to 30th June, 2011;
 - Hosting UNESCO-IHP "International Workshop on Implementing Modular Curricula for Tertiary, Technical and Vocational Education in Integrated Water Resources Management (21-24 May, 2012)

Some Activities of the Workshop

Dr OO Yaya: Brief on RC-IRBM

- Development of the course content for Master's Degree Programme in Integrated Water Resources Management (IWRM); and
- Development of post-graduate diploma course contents in the areas of Integrated Water Resources Management (IWRM), Sanitation and Hygiene Promotion, Gender Mainstreaming in WRM, Water Quality Management, Irrigation and Drainage Technology, Dams and Reservoir Management, Hydrogeology and Drilling Technology, River and Watershed Hydraulics, and IWRM at the river basin level.

Some Activities of the Centre

Dr OO Yaya: Brief on RC-IRBM

- Hosting the Secretariat of the Africa HELP (Hydrology for Environment, Life and Policy) Basins' Coordination Unit
 - Identified Gurara Basin in Central Nigeria as a potential Help Basin;
- Developed a Concept Note on Gurara River Basin Water Allocation Studies and made contacts with Jozsef Vercel Institute (JCI), Belgrade, Serbia for collaboration; and
- Spurred contacts with European Regional Centre for Ecohydrology (ERCE), Lodz, Poland and International Center for Integrated Water Resources Management (ICWRM), Washington D.C., U.S.A for possible collaboration on Ecohydrology/ Ecological Engineering using the Gurara Basin.
- Developed an MoU with Foundation for Conservation of Nigerian Rivers (FCNR), a Nigerian NGO for collaboration and partnership on (i) capacity development, applied research and expert services; and (ii) Postgraduate Programs on IRBM

Some Activities of the Centre

Dr OO Yaya: Brief on RC-IRBM

- Organized a 2-day Workshop in collaboration with UNESCO Regional Office, Abuja on Strengthening the UNESCO-IHP and MAB National Committees for Effective Water Governance, Biosphere Reserve Management and Biodiversity from 26th to 27th March, 2013.

Some Activities of the Centre

Dr OO Yaya: Brief on RC-IRBM

- Coordinated the African Water Resources Capacity Building (AWaCaB) Programme in which capacity gaps in water resources management were assessed in 7 African countries from August 2013 to September, 2014 by National Experts and Regional Reviewers

Some Activities of the Centre

Dr OO Yaya: Brief on RC-IRBM

- Organized a Sensitization Workshop in collaboration with UNESCO Regional Office, Abuja on Transboundary Water Security and Cooperation in the West African sub-Region for Ministries in Nigeria, Ghana, Cote d'Ivoire, Benin and Togo responsible for Water Resources as well as IHP National Committees, River Basin Organizations (RBOs), Academia, the Media and Government Agencies mainly from Nigeria.

Planned Activities of the Centre

Dr OO Yaya: Brief on RC-IRBM

S/N	Activity	Proposed Partner(s)
1.	A three-day sensitization workshop on developing effective transboundary water management education and awareness materials to promote water security and cooperation in the subregion. 3rd Quarter of 2013.	• UNESCO Regional Office, Abuja • Interested Water Centre(s)
2.	Sign the MoU with Foundation for Conservation of Nigerian Rivers (FCNR), and organize a 1-week National Training Workshop on IRBM in 3rd Quarter of 2013.	• FCNR, Nigeria • Interested Water Centre(s)
3.	A two-day Workshop on Reactivation and Strengthening the UNESCO-IRP National Committees for Effective Water Governance in West Africa. 3rd Quarter of 2013.	• UNESCO Regional Office, Abuja • Interested Water Centre(s)
4.	A 3-day Sensitization Workshop on Ecohydrology/ Ecological Engineering for Sustainable Water Resources Management, 4th Quarter of 2013.	• ERCE, Poland • ICIWaRM, U.S.A • Interested Water Centre(s)

Planned Activities of the Centre

Dr OO Yaya: Brief on RC-IRBM

S/N	Activity	Proposed Partner(s)
5.	Key-into the World's Large Rivers Initiatives (WLRI) 3rd quarter of 2013	Interested Water Centre(s)
6.	Implementation of the final phase of the African Water Resources Capacity Building (AWoCoB) Programme that include: a) Organizing Validation and Partner Regional Workshop on Implementation of the Developed Capacity Building Programmes; and b) Making available profile of all regional institutions providing water related training in Africa within the Web Portal Pan African Water Training Platform in 3rd quarter of 2013.	• UNESCO Africa Regional Office, Nairobi • Interested Water Centre(s)

Planned Activities of the Centre

Dr OO Yaya: Brief on RC-IRBM

S/N	Activity	Proposed Partner(s)
7.	Develop and Sign MoUs with UNESCO Water Centres for Capacity Development of RC-IRBM on: a) River and Reservoir Sedimentation Assessment Techniques and Technologies, b) Ecohydrology/Ecological Engineering for Sustainable Water Resources Management, c) Development of national hydrological and hydrogeological monitoring and data management systems including management of transboundary aquifers, d) Joint implementation of tertiary water education, vocational education and training of water technicians, e) Staff exchange for internship, mentoring and joint research and training activities, 2013-2016;	• IRTCES, China • ERCE, Poland • ICIWaRM, U.S.A • IHE, Netherlands • Interested Water Centre(s)

Planned Activities of the Centre

Dr OO Yaya: Brief on RC-IRBM

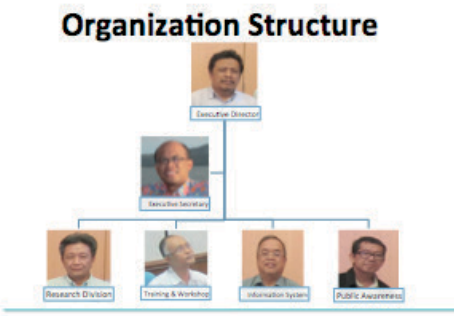

S/N	Activity	Proposed Partner (s)
8.	Commence the Gurara Basin Studies with emphasis on Postgraduate research for MSc. and Ph.D programmes on: a) Integrated Catchment Management Planning; b) Sustainable Basin Water Allocation and Utilization; c) Basin-wide Ecohydrology System Solutions; d) Ecological Engineering for Water and Ecosystem resilience and sustainable services; and e) Effective Governance of a Basin with multi-purpose water schemes including Inter Basin Water Transfer. 2015 - 2018	• JCI, Serbia • ERCE, Poland • ICIWaRM, U.S.A • HTCKL, Malaysia • Interested Water Centre(s)

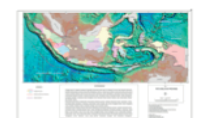

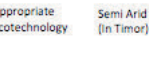

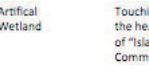

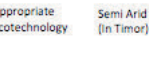

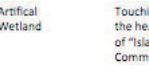

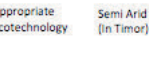

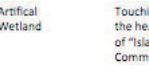

APPENDIX 10

Presentation on “Asia Pacific Centre for Ecohydrology (APCE)”

by

Mr. Hery Harjono, Category 2 Centre of UNESCO / Indonesian Institute of Sciences (LIPI), Indonesia

 <p>ASIA PACIFIC CENTRE FOR ECOHYDROLOGY (APCE)</p>  <p>Hery Harjono Asia Pacific Centre for Ecohydrology (APCE) - Category II Centre of UNESCO/Indonesian Institute of Sciences (LIPI)</p> 	<p>ASIA PACIFIC CENTRE FOR ECOHYDROLOGY APCE – UNESCO CATEGORY II CENTRE</p> <ul style="list-style-type: none"> • It focuses on ecological approaches to water resources management, to provide sustainable water for the people by harnessing science and technology, education and culture. • APCE is committed to contributing towards overcoming current and important issues of national, regional and global interest, such as poverty, disaster risk reduction and climate change mitigation & adaptation .
<p>Governing Board</p>  <p>Prof. Iskandar Zulkarnain, Indonesia</p>  <p>Prof. Soontak Lee, Korea</p>  <p>Prof. Kaoru Takara, Japan</p>  <p>Prof. Shahbaz Khan, UNESCO</p>  <p>Prof. Quentin Grafton, Australia</p>  <p>Prof. Hidayat Pawitan, Indonesia</p>	<p>Organization Structure</p> 
 <p>Strategic Plan of APCE</p>  <p><i>“Managing Water Systems through Ecohydrology and Cultural Values”</i></p> <p>VISION: To be an internationally Reputed Asia Pacific Center in Urban and Rural Ecohydrology by 2021</p> <p>Mission: Develop understanding and practices of ecohydrology through research, training and knowledge exchanges, information systems and public awareness.</p> <p>APCE will develop excellent expertise in the following fields:</p> <ol style="list-style-type: none"> 1. Relationships among ecological pattern and hydrological process; 2. Disturbance and dynamics in natural and anthropogenic ecology and hydrology; 3. Ecohydrological approaches to biodiversity conservation, environmental management, and ecological restoration; 4. Integrating hydrology with ecological planning, design, and architecture, or reverse; 5. Transdisciplinary studies of regional sustainability from scopes of ecohydrology, ecology, culture (society) or integration of them. 	<p>STRATEGIC GOAL of APCE</p> <ol style="list-style-type: none"> 1. To promote local resources base ecohydrological research 2. To strengthen local capacity to adopt ecohydrological concept and approach 3. To provide easy access to local resources based ecohydrological information and knowledge 4. To enhance public awareness of local resources based ecohydrological practices

<h3>OUR APPROACH</h3>  <ol style="list-style-type: none"> 1. Quantification of Source 2. Technological Innovation Based on Ecohydrology and Socio-Cultural Approach. 3. Increasing Awareness through cultural values adoption 	<h3>Water Resources in Indonesia</h3> <ul style="list-style-type: none"> • Related to its natural settings, the existence of water resources in Indonesia are associated with <ul style="list-style-type: none"> • Volcanic chain: Catchment area are relatively small (western part of Sumatra, Java, Bali, Nusa Tenggara, Banda arc, North Molluca). • Continental shelf: Large peatlands areas. In Sunda Shelf: Eastern part of Sumatra and Kalimantan) and In Sahul shelf (South Papua). • Small islands (volcanic islands and coral reefs) 												
<h3>Demography</h3> <ol style="list-style-type: none"> 1. Indonesia consists of about 17,000 islands with five main islands (Sumatra, Java, Kalimantan, Sulawesi and Papua) and more than 400 ethnicities 2. Population: Indonesia 237.6 millions (Java: 136.6; Sumatra: 47.7; Sulawesi: 17.4; Kalimantan: 13.8; Papua: 3.6; Bali-NT: 13.1; Others: 5.5) 3. Indonesia: Urban 37%, Rural 67%. Java: Urban 46%, Rural 54%; Bali: Urban 60%, Rural 40%; NTB: Urban 47%, Rural 53% (BPS, 2010) 4. Main issues: Big cities (Urban area), Urbanized islands, Peat lands, and small Island 	<h3>DEMOSITE I: SAGULING RESERVOIR</h3> <ul style="list-style-type: none"> • Ecohydrology demonstration site at the downstream area of Cibitung River catchment and its land cover types situation (Paddy field, tourism spot, settlement and home industries, farmland and forest) • It represents 4P (Public, People and Private participation) 												
<h3>Demosite II: Community Base Development</h3> <p>Problem of water resources in Islamic boarding school</p> <ul style="list-style-type: none"> • Indonesia : 26.000 Pondok Pesantren (Islamic boarding school :IBS) • Mostly located at rural area • It cover around 26.000.000 people related in IBS • Case study : Ar-Risalah IBS <ul style="list-style-type: none"> – Number of people : 850 – Needs of clean water : 85 m3/day • Problem of wastewater <ul style="list-style-type: none"> – 85 m3/day discharged directly to the environment – High degree of pollution • Urgent to be solved : how to procure and manage clean water an waste water in islamic boarding school 	<h3>ACTIVITIES</h3> <table border="0"> <tr> <td></td> <td>Appropriate Ecotechnology</td> <td></td> <td>Semi Arid Area (In Timor)</td> </tr> <tr> <td></td> <td>Artificial Wetland</td> <td></td> <td>Touching the heart of "Islamic Community"</td> </tr> <tr> <td></td> <td>International IHP Course</td> <td></td> <td>Hindu Balinese Subak Community</td> </tr> </table>		Appropriate Ecotechnology		Semi Arid Area (In Timor)		Artificial Wetland		Touching the heart of "Islamic Community"		International IHP Course		Hindu Balinese Subak Community
	Appropriate Ecotechnology		Semi Arid Area (In Timor)

APPENDIX 11

Presentation on “International Knowledge Centre for Engineering Sciences and Technology (IKCEST)”

by
Dr. Liu Chang, China

 <p>International Knowledge Centre for Engineering Sciences and Technology (IKCEST) under the Auspices of UNESCO (Category II)</p> <p>LIU Chang KL, Malaysia May 2015</p>	<p>Motivation I: Engineering Achievements in China</p> <p>China has made many incredible achievements in the critical engineering fields during the latest decades.</p>  <p>Hangzhou Bay Bridge Three Gorges Dam Project High-Speed Railway Qinghai-Tibet Railway Lunar exploration</p>
<p>Motivation I: Engineering Achievements in China</p> <p>Those achievements produces a wealth of engineering experiences and knowledge, e.g., design documents, engineering drawings, experimental data.</p>  <p>Data set Engineering drawing Code and Algorithm package Experimental figure and table</p> <p>Those expertise and knowledge should be shared with other developing countries.</p>	<p>Motivation II: Strengthening Engineering at UNESCO</p> <p>Engineering is becoming one of the most important items on the development agenda of UNESCO.</p>  <p>Executive Board SC</p>
<p>Motivation III: Big Data Era</p> <p>Big data-Large pools of data that come from Internet, Internet of things (IOT), digital libraries, archives, museum and etc.</p> <p>“Big Data” challenges conventional IT technologies, and now is the hottest word in the industry and academia.</p> <p>Many UNESCO member states, especially the developing countries, currently are in urgent need of the abilities of processing and analyzing the available big data.</p>	<p>The Proposer of IKCEST: CAE</p> <p>The Chinese Academy of Engineering is a national organization composed of elected members with the highest honor in the engineering science and technology community in China. CAE is the highest honorary, advisory academic institution in engineering science and technology in China.</p>  <ul style="list-style-type: none"> CAE was founded in 1994 in Beijing. CAE initiates and conducts strategic study and provides consultancy for decision-making for the nation's key issues of engineering science and technology.

Signing and Unveiling Ceremony of IKCEST

The Signing and Unveiling Ceremony of International Knowledge Centre for Engineering Sciences and Technology (IKCEST) under the Auspices of UNESCO was held in Beijing on June 2, 2014.

Main Task I: to establish an international engineering and technology resources hub

IKCEST will cooperate with research institutes, enterprises and institutions of higher learning worldwide to build a widely connected international hub for engineering and technology resources, thus laying a global data foundation from which to operate.

Main Task II: to establish a public data service platform, and to develop the technology for mining and analyzing knowledge from big data

The public data service platform provides the engineering and technology resources hub with technology support, data connections, data management and development, as well as other technological services.

In addition, it serves to develop ground-breaking technology for large data mining and improvements in data-mining and policy-making ability.

Main Task III: to cooperatively build professional knowledge service systems, and to build capacity in developing countries

On the basis of the engineering science and technology resources hub and the public data service platform, IKCEST will pool engineering and technology institutions in different fields to focus on sustainable development and especially on promoting capacity-building for developing countries.

Main Task IV: to foster interdisciplinary engineering talents with big data processing ability

IKCEST will establish a training department, formulate and implement training plans for engineers and managerial staff to enhance their abilities for developing as well as operating and maintaining professional knowledge systems.

Main Task V: to assist UNESCO to fulfill its aims and support its action plans

IKCEST will cooperate with UNESCO's network of Category 1 and Category 2 institutes and centres in support of the organization's efforts towards the attainment of the UN Millennium Development Goals (MDGs) – and in support of peace building, poverty elimination and sustainable development in a globalized world.

- Local and Indigenous Knowledge Systems

What we can do for you and with you:

Provide a information sharing and knowledge service platform

Initial progress in China (CKCEST)
www.ckcest.cn (17 sub-systems so far)
www.ikcest.org

International Conference on Big Data (to be held in November 2015)

International Training Workshops on Big Data (to be held in December 2015)

International Exchanges and cooperation (Signing of MoU)

Contact IKCEST!

liuchang@cae.cn

Please contact IKCEST for further cooperation. ^_^

Now please enjoy the [video](#) on the overview of IKCEST.

We sincerely look forward to cooperating with you!

Let's join hands in supporting the Post-2015 development agenda!

APPENDIX 12

Presentation on “Isfahan Regional Centre for Technology Incubators and Science Parks Development (IRIS)”

by

Dr. Hasan Khakbaz, Advisor of President of ISTT, Iran

Isfahan Regional Center for Technology Incubators and Science Parks Development (IRIS)
 (under the auspices of UNESCO)
 29th May 2013

Presented by: **Hasan Khakbaz**
 Advisor to President of ISTT

ISTT Introduction

Affiliation by:

- The Ministry of Science, Research & Technology (MSRT)

Support by:

- Isfahan Provincial Government
- Industries
- Universities
- Research Centers

Location:

- On 520 ha of land adjacent to Isfahan University of Technology

www.istt-ir.com Hasan Khakbaz

ISTT Objectives

- ✓ Industrial renovation and competitiveness
- ✓ Bridging the technological divide
- ✓ Encouraging entrepreneurial and scientific thinking
- ✓ National empowerment
- ✓ Job creation for young scientists

ISTT General Services & Facilities

- ✓ Laboratories
- ✓ Library
- ✓ Technical and business consultation
- ✓ Mentoring
- ✓ Networking
- ✓ Marketing
- ✓ Technology Transfer Office (TTO)
- ✓ Financial (loans and grants)
- ✓ International services
- ✓ Seminars and conferences
- ✓ General support services
- ✓ Technical and professional support services

ISTT's Tenant Statistics

Trend of Tenant Settlement in ISTT

Year	Tenant Settlement
2001	17
2002	31
2003	56
2004	87
2005	115
2006	133
2007	142
2008	190
2009	209
2010	226
2011	250
2012	287
2013	327
2014	369

Production Meetings and Events

Signing Ceremony of IIS Agreement

IIS Inauguration Ceremony

 <h3>Mission</h3> <p>This regional center intends to prepare the ground for the development of technology incubators and science parks in the region through providing consultations, training courses and capacity building. The center is also going to facilitate the international relations among science parks and incubators with their counterparts in the region.</p>	 <h3>Objectives of the Center</h3> <ul style="list-style-type: none"> • Conducting capacity-building • Providing technical assistance • Facilitating knowledge transfer • Supporting research • Networking • Information exchange and dissemination
 <h3>IRIS Activities (Major Activities)</h3> <p>Since its official establishment in May 2010, IRIS has developed different programs and plans among them the following have already been realized and operational:</p> <ul style="list-style-type: none"> • Organizing the official inauguration ceremony • Inviting ECO countries ambassadors to attend the inauguration ceremony • Formation of the secretariat of the center • Allocating a space in ISTT to IRIS and equipping it • Designing and developing the logo of the center • Determining the Governing Board members and Director of the center with the cooperation of UNESCO 	 <h3>IRIS Activities (Major Activities)</h3> <ul style="list-style-type: none"> • Formation of the Governing Board • Organizing seven meetings of Governing Board members and developing the work plan of the center • Training Workshops (more than 40 National and international workshops with the attendance of international experts from Japan, South Korea, Germany, UK, Spain, Poland, Romania, Malaysia, China, Tunisia, Australia, etc) • Designing the website of the center • Designing and publishing the English and Persian brochures of the center
 <h3>IRIS Activities (Major Activities)</h3> <p>International Conference on STPs (2011)</p> <p>Introducing the center and publicizing its activities in international events and associations including IASR, ASPA, WTA, etc.</p> <p>Sheikh Bahai Technopreneurship Festival (Annually)</p> <p>Joint Activities with other countries</p> <p>Cooperation Agreements</p> <p>Administration, Secretariat, website, brochures, logo, building, etc</p>	 <h3>Geographic Scope of the Center</h3> <ul style="list-style-type: none"> • At first stage it covers ECO countries (including Tajikistan, Turkmenistan, Kyrgyzstan, Uzbekistan, Turkey, Afghanistan, Pakistan, Azerbaijan, Kazakhstan and Iran)  <p>In the second stage it will be expanded to a wider international scope.</p>
 <h3>The structure of the center</h3>  <pre> graph TD GB[Governing Board] --> EC[Executive Committee] GB --> DIR[Director] DIR --> PD[Planning Division] DIR --> AD[Administrative and Finance Division] DIR --> ID[Legal Affairs] DIR --> PR[Public Relations Division] PD --> NPT[National Technology Park] PD --> PUB[Publication] PD --> RES[Research] PD --> TCB[Training Capacity Building Dept] </pre>	 <h3>The Governing Board Members</h3> <p> Dr. Vahid Ahmadi Deputy Minister of Science, Research & Technology, Iran Chairperson of IRIS</p> <p> Dr. Lidia Ditta Director of UNESCO Sci. Policy & Sustainable Dev. Division Representative of Director-General of UNESCO</p> <p> Dr. Mehdi Keshmiri President of Isfahan Science & Technology Town (ISTT)</p>

The Governing Board Members

Dr. Herbert Chen
COO of TusPark, Director of IASP China Office- China
Member of IRIS GB

Dr. Mohd Yusoff Sulaiman
President of MIGHT- Malaysia
Member of IRIS GB

Prof . Deog Seong Oh
World Technopolis Association (WTA), Secretary General- S. Korea
Member of IRIS GB

The structure of the center

Dr. Mohammad Javad Omidi
ISTT Vice President for Technology Development
Director of IRIS

Dr. Yuxian Nur
Senior Specialist, Sci. Policy & Sustainable Dev. Div., UNESCO
UNESCO representative

Ms. Morteza Yerdanpour
Director of ISTT International Affairs Dept.
Director of IRIS International Affairs Dept.

APPENDIX 13

Presentation on “UNESCO Category 2 Regional Centre on Groundwater Resources, Education, Training and Research Institute in Kenya”

by

Mr. Wilson M. Lekoomet, Kenya Water Institute (KEWI), Kenya

<p style="text-align: center;">UNESCO CATEGORY II REGIONAL CENTRE ON GROUNDWATER RESOURCES, EDUCATION, TRAINING AND RESEARCH INSTITUTE IN KENYA</p> <p style="text-align: center;">PRESENTATION FOR WORKSHOP HELD IN KUALA LUMPUR, MALAYSIA BETWEEN THE 26TH AND 27TH MAY, 2015</p> <p>By: Wilson M. Lekoomet Senior lecturer Kenya Water Institute</p>	<p>Introduction</p> <ul style="list-style-type: none"> In March, 2013 the Government of Kenya (GOK) and UNESCO officially signed an agreement to create a UNESCO Category II regional centre on groundwater resources, education, training and research. The centre hosted in KEWI will act as a regional platform for education, research and training on groundwater resources. The centre will be conducting research, offering professional training, providing advice, facilitating technological transfer and promoting regional cooperation and exchange experience.
<p>Introduction Cont.</p> <ul style="list-style-type: none"> Some key objectives of the centre include the conduct of research, offering professional training, providing policy advice, facilitating technological transfer and promoting regional collaboration and exchange of experience. The specific agreement was signed in March, 2013, however there has been a delay in the operationalisation of the centre activities due to some reforms in the state corporations in Kenya. In March 2013 the Kenya government initiated a reform process which is meant to streamline all state corporations. This process involves streamlining, and merging of state corporations with a view of improving their efficiencies. The state corporation advisory committee (SCAC) has concluded the process and it is anticipated that in due course the centre will be operationalized. The ministry of Environment, Water and Natural Resources is expediting the signing up of the legal documents so as to ensure that the centre is operationalized ASAP. 	<p>Centre's of activities</p> <ul style="list-style-type: none"> In the meanwhile, although the centre has not been operationalized Kenya Water Institute (KEWI) has been undertaking a number of activities on behalf of the centre. Some of these activities are: Training in groundwater for both the regular students and other clients (short courses) for different clients in Kenya and the region. Consultancy services to different clients in Kenya. Hydro geological surveys for the different clients in Kenya and the region. Capacity building of water experts i.e. Currently a number of KEWI staff are pursuing degree programmes in different Universities in Kenya. This is aimed at improving water ground water Management capacity within the institution and the country. So far Seven (7) staff are undertaking undergraduate, seven are undertaking their MSc, while three (3) are undertaking their PhDs.
<p>Centre's of activities cont.</p> <ul style="list-style-type: none"> KEWI was a major partner and contributed in the sponsoring of the National Water Summit held in October, 2014 in Turkana and presented a paper on “Research and capacity building in the water sector” in Kenya. KEWI has identified an office for the centre, where the coordination of the center's activities will be done. In the meanwhile, as we await the commencement of the center's operations a senior officer has been identified to coordinate the center's activities. KEWI played a major role in cultural celebrations held at KICC, Nairobi organized by KNATCOM in November, 2014. KEWI participated in the Kenya National Commission for UNESCO collaboration marking the 50 years of Kenya and UNESCO collaboration held between 24th November, 2014 and 28th November, 2014 held in Paris. 	<ul style="list-style-type: none"> The construction of a water resource centre, which will act as a hub for water Resources Research and training is ongoing. The resource center is going to host the offices of the UNESCO Category II center. In January, 2015 ten (10) KEWI staff members undertook a tailor made training in groundwater in Naivasha funded by the Netherlands Fellow ship programme (Niche – Nuffic programme). In collaboration with other partners (JKUAT and living Water African Region), KEWI is in the process of establishing a joint five year project whose purpose is to develop capacity for the drilling technology experts. Under this project about twelve experts will be trained at phd level, twenty at master level and about 150 at advanced diploma level.

<p>Areas of Collaboration</p> <p>In the recent past UNESCO undertook a Ground Water mapping project in Turkana which culminated in the discovery of large ground water reservoirs. The KEWI and the category II centre will play a major role in furthering this course and will serve as a hub for capacity development in water related matters in the East Africa Region.</p> <ul style="list-style-type: none"> • Currently KEWI is collaborating with a number of institutions in the sector within Kenya and outside Kenya. <p>Potential areas of Collaboration are;</p> <ul style="list-style-type: none"> • Ground water capacity development. • Mapping of ground water resources in the region • Groundwater Governance (Policy, legislative framework, Institutional capacity and Regulations). • Flood control and drought mitigation. Nairobi is prone to flooding especially the area near the Kenya Water Institute. 	<p>Potential areas of Collaboration continued</p> <ul style="list-style-type: none"> • Trans boundary ground water management. • Water Security • Integrated Water Resources Management • Non Revenue Water management • Alternative water sources i.e. rainwater harvesting. • Developing a sustainable and reliable water information system. • Rain water harvesting for irrigation. <p>KEWI is looking forward to initiate more collaboration with other institutions within the UNESCO Family and others.</p>

Presentation on “HTCKL Work Related to Science and UNESCO”
 by
**Dr. Mohamed Roseli Zainal Abidin, Humid Tropics Centre Kuala Lumpur (HTCKL),
 Department of Irrigation and Drainage Malaysia**

MISSION & OBJECTIVES

Mission

A catalyst in carrying out regional and international collaboration, formalization and partnering among countries in the region where water related problems are in need for urgent attention and a demonstrable solution.

Objectives

- To promote a conducive atmosphere for collaboration through technology and information exchange, education and sciences.
- To increase scientific, technological knowledge about the hydrological cycle thus increasing the capacity to better manage and develop the water resources in a holistic manner, and
- To promote and increase scientific and technological knowledge about urban stormwater management, ecohydrology, humid tropics and water education.

The Regional Humid Tropics Hydrology and Water Resources Centre for South-East Asia and the Pacific

Under the auspices of the United Nations Education, Scientific and Cultural Organization-International Hydrological Programme (UNESCO-IHP) since 28 October 1999

Integrated Stormwater Management Ecohydrology
Project at HTCKL officiated by HE Irina Bokova,
Director General UNESCO on 21 May 2013

Releasing fish in HTC's constructed

2. PROPOSED UPSCALING BIOTECHNOLOGY SME AT LANGAT-HELP RIVER BASIN

Under SWITCH-In-Asia and Langat-HELP River Basin

3. A Solar Still Stepped System for Domestic and Drinking Water

- The 1st prototype built in Perhentian Island, Terengganu, Malaysia for desalination of sea water into domestic and drinking water – monitoring the performance in progress until end of 2015.
- The 2nd small prototype constructed at HTCKL to improve river water quality.

The 2nd prototype model at HTCKL

3. A Solar Still Stepped System for Domestic and Drinking Water - small prototype constructed at HTCKL

3. A Solar Still Stepped System for Domestic and Drinking Water Desalination of Sea Water in Perhentian Island.

Study on the effectiveness of the use of the System for the desalination (of sea water for domestic use (including drinking water), and the use by fishermen.

- Proposed Contribution to the Asia-Pacific region through UN-Intergovernmental Oceanographic Commission (IOC) and the UNESCO-IHP

4. River Rejuvenation for Social and Water Ecosystem Project at Jenderam River (tributary of Langat-HELP Basin)

- Demonstrate a project "living, clean and vibrant river" Applied R & D approach to increase the return of aquatic life in the river
- To use **Multimedia Bed Bio-filter (MBB)** and **Phytoremediation** technique in the stream so that the water is clean and the river can be used for recreational activities.

4. Using Multimedia Bed Biofilter (MBB) in Stream Channel to Improve River Water Quality

Construction Photos of 1st Phase

5. Phytoremediation: A Green Technology to Remove Environmental Pollutants Using Vetiver Grass

6. Reused of Alum Sludge

6. Reused of Alum Sludge : The product that we have made

7. STUDY ON ARTIFICIAL BIO-MACROPORE FOR STORMWATER MANAGEMENT AT HUMID TROPICS CENTRE KUALA LUMPUR AND

APPENDIX 15

Presentation on “IPCC Fifth Assessment Report, Lima Climate Action High Level Session Lima Peru”

by
Dr. Rajendra K. Pachauri, India

 <p>IPCC Fifth Assessment Report</p> <p>Lima Climate Action High Level Session Lima, Peru</p> <p>ipcc</p>	<h3>Key Messages</h3> <ul style="list-style-type: none"> → Human influence on the climate system is clear → The more we disrupt our climate, the more we risk severe, pervasive and irreversible impacts → We have the means to limit climate change and build a more prosperous, sustainable future <p>ipcc</p>
<p>It is extremely likely that human influence has been the dominant cause of warming since the mid-20th century.</p>  <p>ipcc</p>	<h3>Climate change will amplify existing risks and create new risks for natural and human systems</h3>  <p>Continued warming increases the risks of severe, pervasive, and irreversible impacts.</p> <p>Risks are unevenly distributed and are generally greater for disadvantaged people and communities in countries at all levels of development.</p> <p>People who are socially, economically, culturally, politically, institutionally or otherwise marginalized are especially vulnerable to climate change.</p> <p>ipcc</p>
<p>(A) Risks from climate change... (B) ...depend on cumulative CO₂ emissions...</p> <p>Figure SPM.10, A reader's guide</p> <p>From climate change risks to GHG emissions</p>  <p>(C) ...which in turn depend on annual emissions over the next decades</p> <p>ipcc</p>	 <p>“Coastal adaptation and migration requires well aligned policies and measures across multiple scales: international, regional, national and sub-national. Policies across all scales supporting the knowledge development, risk data and transfer, as well as financing for responses to climate change, can improve and advance the effectiveness of policies that directly promote adaptation and migration.”</p> <p>ipcc</p>

Evaluation of costs and limitations

- Ambitious mitigation is affordable and translatable into delayed but not foregone growth (mitigates losses in global consumption of median value 1.7 % in 2030)
- Estimated costs of mitigation do not account for the benefits of reduced climate change
- Many impacts, such as loss of human lives, cultural heritage, and ecosystem services, are difficult to value and monetize, and that they are poorly reflected in estimates of losses

ipcc
IPCC Working Group III Contribution to the Fourth Assessment Report of the Intergovernmental Panel on Climate Change

Climate change and equity

Issues of equity, justice, and fairness arise with respect to mitigation and adaptation:

- Different past and future contributions to the accumulation of GHGs in the atmosphere
- Varying challenges and circumstances
- Different capacities to address mitigation and adaptation

Options for equitable burden-sharing can reduce the potential for the costs of climate action to constrain development.

ipcc

Presentation on **“UNESCO Chair on Water Reuse, University of Tehran”**
by
Prof. Dr. Mohammad-Hossein Sarrafzadeh, Iran

<p>UNESCO Chair On Water Reuse</p>  <p>United Nations Educational, Scientific and Cultural Organization</p> <p>UNESCO Chair on Water Reuse University of Tehran, Iran</p> <p>Dr. Mohammad-Hossein Sarrafzadeh</p> 	<p>The Chair place in UNESCO water Family</p> <p>UNESCO as the only UN specialized agency with a specific mandate to promote water science</p>  <p>UNESCO Water Related Pillars</p> <p>IHP Chairs and Centers World Water Assessment Program (WWAP)</p> <p>16 Centers 25 Chairs + 1</p> 
<p>UNESCO Water Family</p>  	<p>Water Crisis in the world</p> <ul style="list-style-type: none"> • 1.1 billion people live without clean drinking water • 2.6 billion people lack adequate sanitation • 3 900 children die every day from water borne diseases • And so on 
<p>The same water that existed on Earth billions of years ago still exists today.</p> 	<p>Due to over-pumping, the groundwater in several countries is almost gone.</p> <p>UNITED STATES NORTHERN CHINA INDIA INDONESIA INDIA PAKISTAN</p>

Types of Activities we do

- Post graduate teaching program
- Training
- Research
- Institutional development (strengthening of information/library services, laboratories, etc.)

Objectives

- **Development Objectives (Long-term)**
- Gathering the available expertise in the field of water reuse and facilitate information transfer
- Creation of networks between water institutions to facilitate exchange of experience and information nationally, regionally and internationally.
- Conduct and contribute to workshops and conferences of national, regional and international nature to push forward exchange of experience

Objectives

- **Specific Objectives (Short-term)**
- Technological developments for water reuse
- Save water (by recycling and groundwater recharge)
- Low-cost methods for sanitary disposal of municipal wastewater
- Reducing pollution of rivers and other surface water
- Provides a reliable water supply to farmers

Our Strategy

Our Slogan

Water for Peace and Cooperation Not War and Disintegration

Our activities

Celebrating World and National Water Day:
Water and sustainable development

Publicize our water research works

- Annual conference on water reuse
- Research journal on water reuse (Persian language)
- Participate in Research exhibitions

Publicize our water research works ...

- Session on Desalination Technologies in collaboration with Water Institute and Scientific Deputy of President
- Professional workshop on "Water reuse role on preventing environmental harmful effects" during 4th environmental engineering exhibition

Other kind of activities ...

- "Light & Water" Photography competition 2015 (International year of Light)

Other kind of activities ...

- The group of environmentalists named:

"Ghatreh"

Means droplet

Future events

- 12th International Conference on Membrane Science and Technology (Nov. 2015)

- Water, Sustainable Development, and Healthy Life summit (in collaboration with 'Advancement of Science and Technology in the Islamic World Secretary')

March 2016

Questions and expectations from such workshop:

1. How could things be done differently - tomorrow - in water sector with the help of UNESCO?
2. What are the obstacles or challenges related to water cooperation instead water war and the role of UNESCO to solve them?
3. What are the skills and capacities required within the UNESCO water family to keep peace and prevent water conflicts?
4. How UNESCO interventions can make development activities more sustainable in regards to water?

APPENDIX 18

“Presentation on behalf of Professor Dr. M.S. Swaminathan, Hony. UNESCO Jaques Cousteau Chair for Ecotechnology for Sustainable Rural Development”

by

Dr. P.C. Kesavan, M.S. Swaminathan Research Foundation, India

<p style="text-align: center;">Presentation on behalf of Professor Dr. M.S. Swaminathan FRS, Hony. UNESCO Jaques Cousteau Chair for Ecotechnology for Sustainable Rural Development 26 - 27 May 2015, Kuala Lumpur</p> <p style="text-align: center;">P.C. KESAVAN</p> <p style="text-align: center;">M.S. SWAMINATHAN RESEARCH FOUNDATION</p>	<p style="text-align: center;">Green Revolution and the Paradox of Grain Mountains and Hungry Millions</p> <ul style="list-style-type: none"> • ‘GR’ provided food security at the national level (i.e. enhanced food Availability), but not at the household level of millions of resource-poor marginal and small farming, fishing and landless rural families. • ‘GR’ did not create more on-farm and off-farm livelihoods. • ‘GR’ not integrated with sustainable rural development (i.e. safe drinking water, sanitation etc). So, Absorption/Utilisation was also not addressed. • ‘GR’ largely monocropping ; loss of agrobiodiversity
<p style="text-align: center;">Indian Scenario: Paradigm of “Mountains of grains on the one hand and Millions of hungry people” on the other</p> <ul style="list-style-type: none"> ➤ Pillars of household / Individual level Food security: 1. Availability 2. Access 3. Absorption ➤ Livelihood security — Food security ➤ Clean drinking water especially in the rural areas <p style="text-align: center;"><small>(Swaminathan 2001, Gen.66:81, 948-954; 2003 NRES J pp.7.1-7.14)</small></p>	<p style="text-align: center;">Achieving Productivity in Perpetuity for Food and Nutrition Security: Evolutionary Perspectives (Based on numerous research papers and books of Professor M.S. Swaminathan)</p> <ul style="list-style-type: none"> • Green Revolution: Broke the inertia in the yield increment of cereal grains ; Not sustainable; as predicted, it degenerated into a ‘Greed Revolution’ • Evergreen Revolution: Sustainable; achieving productivity in perpetuity without accompanying ecological and social harm. Suitable for small farms with resource-poor farmers. With appropriate farming systems, these can provide food and nutrition security, income to access food and agricultural remedies for nutritional maladies
<p style="text-align: center;">Transforming Green Revolution into Evergreen Revolution</p> <p style="text-align: center;"><small>(P.C. Kesavan and M.S. Swaminathan, 2007, ASM J. 1, 362-368)</small></p>	<p style="text-align: center;">Components of Evergreen Revolution</p> <p style="text-align: center;"><small>(P.C. Kesavan and M.S. Swaminathan, 2007 ASM J. 1, 361 - 368)</small></p>

Ecotechnology Revolution

- Blending frontier technologies with traditional wisdom and ecological prudence. These then become eco-technologies with *pro-nature, pro-poor and pro-women* orientation

- Ecotechnologies Involve concurrent attention to *Ecology, Energy, Equity, Economics, Employment and Ethics.*

- Ecotechnologies are in action in MSSRF's Biovillages.

- (ICT, BT, Nano, Space, Nuclear)

Dialogue on Ecotechnology at M.S. Swaminathan Research Foundation, 1994

Evergreen Revolution Biovillage Paradigm

Natural Resources Conservation and Enhancement

- Land
- Water
- Biodiversity
- Common Property Resources

Jobless economic growth is the enemy of food security in poor households

Sustainable Livelihoods

On-farm

- Diversification
- Value Addition

- Market Driven Enterprises
- Self-help Groups Supported by Micro-credit

Vermi-compost Production Keelewanjour- Karaikal (UTP)

Training on Fish Pickle

Training on Prawn pickle preparation and marketing

This block contains two photographs. The top-left photo shows several glass jars filled with a dark, pickled substance, likely prawn pickle, arranged on a table. The bottom-right photo shows a woman in a purple shirt holding two jars of the product, standing in front of a group of people during a training session.

Crab fattening Demonstration

This block features two photographs. The top-right photo shows a group of people standing on a small boat in a body of water, engaged in a demonstration. The bottom-left photo shows a man in a white shirt standing on a wooden platform, possibly a boat deck, handling crabs.

Crab Fattening in Pezayar Teunamli Nager -Nagai

This block contains three photographs. The top-left photo shows a crab being weighed on a red digital scale. The top-right photo shows a large green container filled with crabs. The bottom-left photo shows a group of women in sarees, and the bottom-right photo shows a large number of crabs in a green tray.

SHGs micro enterprises activities

Production of Oyster Mushroom

8 units in 2 villages are operational

10 x 20 sq feet

Income:
Rs. 1200/month per unit

This block features four photographs. The top-right photo shows a wooden structure, likely a mushroom cultivation shed. The bottom-left photo shows a close-up of white oyster mushrooms growing on a substrate. The bottom-right photo shows a stack of harvested white oyster mushrooms. The middle-right photo shows a person working with a large stack of wooden logs or substrates.

25x100 feet
2 sheds
40 days cycle
5000 chicken (1 bird/1 sq feet)
Total expenditure: 2.23 lakhs
Total income: 2.69 lakhs
Net profit: 0.26 lakhs

This block contains three photographs showing the interior of a large poultry shed. The top-right photo shows a wide view of the shed with many chickens and red feeders. The bottom-left and bottom-right photos are closer views of the chickens and their red feeders.

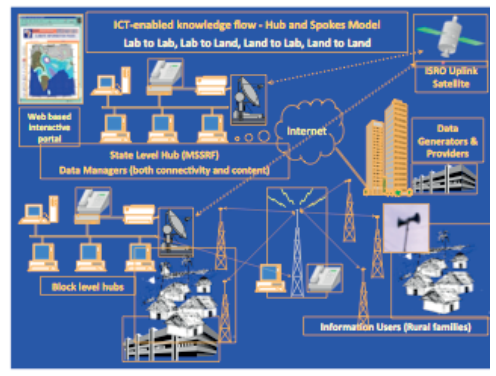

This block contains three photographs showing the interior of a large poultry shed. The top-left photo shows a wide view of the shed with many chickens and red feeders. Farming System for Nutrition (FSN)*

"FSN involves the introduction of agricultural remedies to the nutritional maladies prevailing in an area, through the mainstreaming of nutritional criteria in the selection of the components of a farming system involving horticultural crops, farm animals and where feasible, fish. While finalizing the components of a farming system, the gender and age dimensions of human nutritional needs are kept in view, such as the special needs of pregnant women and nursing mothers, and new born babies during the first 1000 days after conception and birth". Biofortified crop varieties are introduced in FSN wherever available.

UNESCO Chair in Water Resources -Sudan (UNESCO-CWR)

- ### Industry and Consultancy Projects
- The UNESCO-CWR has conducted and currently engaged in a number of consultancy work projects that funded by local, regional and international Bodies
- Flood Risk Mapping
 - Eastern Nile Water Shed management program
 - Design of an upgraded data acquisition, communication and forecasting systems
 - Protection and Development of Khartoum River Fronts
- UNESCO Chair in Water Resources -Sudan (UNESCO-CWR)

- ### Knowledge Documentation and Dissemination
- This performed Through:
- ◆ Documenting all Activities and Publishing.
 - ◆ Monthly Chair Forums
 - ◆ Public Lectures
 - ◆ Updating UCWR Library
 - ◆ Networking
- UNESCO Chair in Water Resources -Sudan (UNESCO-CWR)

- ### Regional and International Networks
- Nile Basin Initiatives (NBI) in the field of (Applied Training and Research Studies)
 - Friend/Nile Project Network
 - Nile Basin Capacity Building Network for River Engineering (NBCBN-RE) Programme.
 - Consultative Group for International Agricultural Research (CGIAR)
 - International Network for Capacity Building in IWRM.
 - Wadi Hydrology Network in Arab Region (WHIN)
 - Arab Network for Water Researchers
 - Tiger Initiatives
 - International Water Management Institute (IWMI)
 - IHP-HELP Program
 - National Networks
- UNESCO Chair in Water Resources -Sudan (UNESCO-CWR)

MSc Programs

Program	No. of graduates	Years
MSc in Hydrology	26	2000 - 2007
MSc in WRDM	35	2008 -
MSc in Env. E	-	2010

Postgraduate Diploma Program (started in 2006)

P. Diploma Program	No. of Students
Graduated Students	25
Total Registered	94

UNESCO-CWR is staffed by more than twenty (20) water resources experts in the various areas of specialisation. Below is a list of the Key personnel lead by experts that have a wide range of knowledge in academic, research and consultancy works.

Core Staff

- Professor Abdalla A. Ahmed : Hydraulic Engineering and IWRM
- Professor Ahmed Salih Ahmed : Irrigation Management
- Professor Hassan Fadul : Soil Sciences and Agronomy
- Dr. Kamal E. Bashar : Hydrology and Watershed Management
- Dr. Ahmed Musa Syam : Hydraulic Engineering
- Professor Abbas Abdalla : River Morphology
- Dr. Ibrahim Ali Babiker : Remote Sensing and GIS
- Dr. Yousif A. Ibrahim : Water System Analysis
- Eng. Muna Musnad (M.Sc.) : Hydrology, WRM, Water Quality

UNESCO Chair in Water Resources -Sudan (UNESCO-CWR)

Human Resources Cont'd.

Core Staff

- Eng. Elgaili M. Ahmed Bashir (M.Sc.): WRE
- Eng. Osama Hamid (M.Sc.) : Civil Design and costing
- Eng. Ayman Khalid (M.Sc.) : Environmental Engineering
- Serf (Din Zarog (Higher Dip.) : GIS and RS Technician Ms. Dina
- Abdin Salama (M.Sc.) : Hydrology
- Ms. Fida Bukhari (MSc) : Water Quality
- Mr. Mohamed Faisal (M.Sc.) : Librarian
- Arafat Ibrahim Osman (M.Sc.) : Computer Programmer

Affiliated Staff

- Professor Khalil Medani --- Socio-Economic
- Dr. Abdalla Elson --- Groundwater
- Dr. Sami Omer Haj ElKhadir --- Groundwater
- Prof. AlSamsari ElGadi --- Livestock Production
- Professor Gamal Abdou --- Groundwater Modelling
- Prof. Abdelhadi Abdelwahab --- Agriculture
- Prof. Nur Eldin El Meshari --- Animal Production
- Dr. Omer Abdalla --- Water Quality
- Dr. Babiker Abdalla --- Environmental Specialist
- Ms Laila Yahia (MSc) --- Environmental Engineering

UNESCO Chair in Water Resources -Sudan (UNESCO-CWR)

Facilities

In performing its educational, research and consultation activities the UCWR has avail and equipped itself with a wide range of supporting facilities. These comprise:-

- A library
- Meeting Halls
- Groundwater exploration Equipments
- Remote Sensing & GIS Laboratory
- Lecture Rooms,
- Water Quality Laboratory
- Survey Laboratory

UNESCO Chair in Water Resources -Sudan (UNESCO-CWR)

Problems and Challenges

- Temporary premises
- Inadequate Funding
- Staff Shortage
- Courses Related Problems

UNESCO Chair in Water Resources -Sudan (UNESCO-CWR)

APPENDIX 20

**Presentation on “Ulugbek UNESCO Chair on Physics and Astronomy”
by
Prof. Dr. B. Fayzullaev, Department of Physics, National University of Uzbekistan**

<p style="text-align: center;">Ulugbek UNESCO Chair on Physics and Astronomy In National University of Uzbekistan, Tashkent, Uzbekistan</p> <p style="text-align: center;">(Prof. B. Fayzullaev Dept. of Physics, National University of Uzbekistan)</p>	<p style="text-align: center;">Ulugbek UNESCO Chair</p> <ul style="list-style-type: none">• The Ulugbek UNESCO Chair on Physics and Astronomy was established at the National University of Uzbekistan (NUUZ), Tashkent, in 1998.* Promotion of an integrated system of research, training, information and documentation activities in the field of Physics and Astronomy; Development of the integration into postgraduate study program of new information and communication technologies; Publication of new curricula materials in this field; Organization of scientific conferences and round-tables.
<p style="text-align: center;">Academic activities</p> <p>■ Education</p> <ul style="list-style-type: none">• Courses on:<ul style="list-style-type: none">• 1. Quantum Chromo-dynamics, 40 h., each year,• 2. Gauge Quantum Fields, 40 h., each year,• 3. Quantum Statistics, 40 h., each year,• 4. Theory of Gravity, 40 h., each year,• 5. Mathematica 9.0 40 h., each year,• 6. TeX&Latex, 40 h., each year,• 7. Networking and Internet, 40 h., each year.• Target groups: graduate students (10-14 each year)	<p style="text-align: center;">Academic activities</p> <p>■ Textbooks:</p> <ul style="list-style-type: none">• -The course of theoretical physics in 4 volumes in Uzbek on:<ul style="list-style-type: none">• 1. Theoretical Mechanics;• 2. Electrodynamics;• 3. Quantum Mechanics;• 4. Statistical Physics and Thermodynamics
<p style="text-align: center;">Academic activities</p> <ul style="list-style-type: none">• Most outstanding students were ensured by recommendations to continue their education in German, Japanese and Korean Universities. Some of them has got their PhD degree already.	<p style="text-align: center;">UNESCO Chair and Dept. of Physics</p> <ul style="list-style-type: none">• The Ulugbek UNESCO Chair is acting in close cooperation with the Nuclear and Theoretical Physics Chair of Department of Physics, the Uzbekistan National University, Tashkent. Many courses are delivered jointly for common students. Invited by UNESCO Chair from abroad speakers giving talks at common seminar.

International connections

- * Each year 3-4 scientists abroad are visiting our Chairs. For example, invited speakers from abroad who gave talks at the Department seminar during last year:
- * 1) Prof. Jongbae Hong, Institute for Basic Science, Korea (May, 2015)
- * 2) Prof. Yuki Izumida, Ochanomizu University, Tokyo (January, 2015)
- * 3) Prof. Shogo Tanimura, Nagoya University, Japan (September, 2014)
- * 4) Prof. Giulio Casati, University of Insubria, Italy (May, 2014).

Conferences/Meetings

Following International meetings were organized:

- * International Research Workshop [NPOCD03](#), Tashkent, 22-28 Sept. 2003;
- * NATO Advanced Research Workshop "Non-linear dynamics and fundamental interactions", Tashkent, Oct. 9 - 15, 2004.

UNESCO

- * In May, 2008 at NUUZ Head of office and UNESCO representative in Uzbekistan Mrs. Anna Paolini provided two days seminar- training for UNESCO Chair holders in Uzbekistan and gave a good coverage of UNESCO priorities and pointed out the importance of network collaborations. During that seminar the activities of each existing chairs in Uzbekistan was assessed.

Medicine and Physics

- * Oncological clinics of Uzbekistan have purchased 40-50 nuclear medicine devices, but there is strong deficit of practitioners responsible for specific service components. Our Chairs in collaboration with Institute of Nuclear Physics is preparing specialists with master's degree for working with this and other nuclear (medicine) instruments and devices – each year 7-8.

Nuclear Activation analysis

- * There is another direction of our activity – preparation of nuclear physics master's degree specialists on nuclear activation analysis (in collaboration with INP). These specialists are working on analysis of materials in mining industry, mainly, determination of the element content of the materials. These methods are using in custom control too.

Ulugbek UNESCO Chair

- * **Thank you for your attention!**

ACKNOWLEDGMENTS

We would like to acknowledge the contribution of:

- Ministry of Education Malaysia (MoE) staff and contributors: Datin Paduka Ir. Dr. Siti Hamisah Tapsir, Mr. Muhammad Zainal Abidin Zainun.
- Malaysian National Commission for UNESCO staff and contributors: Mr. Mohd Khairul Adib Abd Rahman.
- International Science, Technology and Innovation Centre for South-South Cooperation Under the Auspices of UNESCO (ISTIC) staff and contributors: Dato Ir. Lee Yee Cheong, Dato Dr. Samsudin Tugiman, Ms. Zarmila Zalmi Sabot.
- UNESCO Office in Jakarta staff and contributors: Shahbaz Khan, Joana Vitorica Onaindia, Tchadie Alain Michel, Dinanti Erawati, Sharizad Sulaiman, Soyun Kang.
- Universiti Teknologi Malaysia staff and contributors: Prof. Dr. Zulkifli Yusop, Prof. Dr. Arshad Ahmad, Assoc. Prof. Dr. Sharif Moniruzzaman Shirazi, Assoc. Prof. Dr. Shareeshivadasan A/L Chelliapan, Dr. Noorul Hassan Zardari, Mrs. Nor Azizah Ismail, Mrs. Siti Salamah Mohd Shihab, Mr. Mohd. Farid Rahmat, Mrs. Fadzlin Md Sairan, Mr. Chew Teong Han, Mr. Mohamad Fairuz bin Hamzah, Mr. Izad Imran Ismail, Ms. Nalina A/P Paramasivan, Mr. Muhammad Taufik Hashim, Mr. Mohd. Rafi Abu Bakar, Assoc. Prof. Zainuddin Abdul Razak, Ms. Nurul Farhana Sufian, Mrs. Mirahani Maris, Mr. Mohamad Hafiz Asrun, Mrs. Suriyani Yusoff.

BACKGROUND

The current year 2015 is a critical moment globally for the transition into the Post-2015 Development Agenda as new framework for global development efforts. With the mandate to promote international cooperation in education, science, culture, communication and information, UNESCO's contribution to the Post-2015 Development Agenda is essential. UNESCO is mobilizing all its strengths for building sustainable, inclusive, knowledgeable societies needed for the century ahead.

The draft of the Sustainable Development Goals (SDG) 'outcome document' includes 17 goals and 169 targets, where the universality of Science and its critical role for poverty eradication and sustainable development has been highlighted.

The programmes of UNESCO in Natural Sciences have been able to expand cooperation beyond the network of the traditional intermediaries – what may be called the “UNESCO Natural Sciences family”: National Commissions, UNESCO Chairs, Category 2 Institutes and Centres, clubs and associations, National Committees of intergovernmental programmes and specialized networks, such as the Associated Schools Project Network.

Within this variety of partners, Category 2 Centres and Chairs play an important role as they expand the capacities and effectiveness to carry out activities, promote the outreach, impact and visibility at all levels, broaden the support base and mobilize resources and create synergies among all communities of UNESCO.

As part of the Post-2015 Development Agenda initiatives, the UNESCO Office, Jakarta (Regional Sciences Bureau for Asia and the Pacific) organized several events (international conference, workshop, forum and seminar) in May 2015 in Kuala Lumpur. This report presents the proceedings and main outcomes of the workshop on “Promoting Interaction and Knowledge Exchange Between UNESCO Natural Sciences Related Centres and Chairs in Asia and the Pacific”.

UNESCO

is mobilizing all its strengths
for building the sustainable,
inclusive, knowledge societies
needed for the century ahead.

MAIN ACTORS OF THE WORKSHOP

In Asia and the Pacific Region, the Category 2 Centres and Chairs have the capacity to provide a tangible contribution towards the realization of not only 'Natural Sciences' objectives and priorities as stated in the UNESCO Medium Term Strategy but also towards the implementation of the SDGs in the Post-2015 framework. The Category 2 Centres and Chairs can contribute by expanding and strengthening the UNESCO's global and regional outreach, and providing an collective impact, given that the competencies, scope of expertise, as well as training opportunities that they offer. Their dissemination is also an added value to strengthen North-South, South-South and triangular cooperation. In that regards, Category 2 Centres and Chairs from Africa will also contribute to the workshop.

Therefore, through the workshop, the Natural Sciences related Category 2 Centre and Chairs in Asia and the Pacific region are expected to share knowledge and experience in order to step forward to broaden perspectives as well as to scope strategic areas for cooperation.

MESSAGE OF ACTION

The workshop was organized in order to promote interaction and knowledge exchange for strengthening South-South cooperation between UNESCO Natural Sciences related Category 2 Centres and Chairs in Asia and the Pacific Region, and link with Africa. A strong and efficient Natural Sciences network in the region and globally will be critical to support the implementation of the Post-2015 Development Agenda framework in the upcoming years.

The following actions were the outcomes of the workshop:

- Provide an overview of UNESCO's Science Category 2 Centres and Chairs in Asia-Pacific and their contribution to programmes and activities of UNESCO in the Post-2015 Development Agenda framework.
- Identify potential gaps and overlaps among the Centres and Chairs in Asia-Pacific.
- Identify formats for collaboration and knowledge exchange on science research and sustainable development between the different stakeholders.
- Build networks for strengthening partnerships between the Category 2 Centres and Chairs in Asia-Pacific, in Africa, as well as among the Malaysian scientific network.
- Initiate reflection for the development of a regional strategy on funds raising and joint actions in the Asia-Pacific to support the Post-2015 Development Agenda.

WORKSHOP PRESENTATIONS

Below is the list of the presentations made during the Workshop. The slides of the presentations are given in Appendix 6.

Presentations from UNESCO Category 2 Centre for Natural Sciences:

1. *“International Science, Technology and Innovation Centre for South-South Cooperation Under The Auspices of UNESCO”*, by Dato Dr. Samsudin Tugirman, Director of ISTIC, Malaysia.
2. *“Space Technology: A Powerful Tool for Smart Management of UNESCO Properties”*, by Ms Liu Jie, International Centre on Space Technology for Natural and Cultural Heritage under the auspices of UNESCO (HIST), China.
3. *“An Introduction to ICQHS Activities, Plans and Potentials”*, by Mr Majid Labbaf Khaneiki, International Centre on Qanat and Historic Hydraulic Structures (ICQHS), Iran.
4. *“Regional Centre for Integrated River Basin Management, Kaduna, Nigeria (A Category 2 UNESCO Water Centre)”* by Dr. Omogbemi Omolojo Yaya, RC-IRBM, National Water Resource Institute, Nigeria.
5. *“Asia Pacific Centre for Ecohydrology (APCE)”* by Mr. Hery Harjono, Category 2 Centre of UNESCO / Indonesian Institute of Sciences (LIPI), Indonesia.
6. *“International Knowledge Centre for Engineering Sciences and Technology (IKGEST)”* by Dr. Liu Chang, China.
7. *“Isfahan Regional Centre for Technology Incubators and Science Parks Development (IRIS)”* by Dr. Hasan Khakbaz, Advisor of President of ISTT, Iran.
8. *“UNESCO Category 2 Regional Centre on Groundwater Resources, Education, Training and Research Institute in Kenya”* by Mr. Wilson M. Lekooet, Kenya Water Institute (KEWI), Kenya.
9. *“HTCKL Work Related to Science and UNESCO”* by Dr. Mohamed Roseli Zainal Abidin, Humid Tropics Centre Kuala Lumpur (HTCKL), Department of Irrigation and Drainage Malaysia.

Presentations from UNESCO Chairs for Natural Sciences:

1. *“IPCC Fifth Assessment Report, Lima Climate Action High Level Session Lima Peru”* by Dr. Rajendra K. Pachauri, India.
2. *“Environmental Management and Infrastructure Development Engineering, Saitama University Japan”* by Prof. Dr. Matsumoto Yasunao, Japan.
3. *“UNESCO Chair on Water Reuse, University of Tehran”* by Prof. Dr. Mohammad-Hossein Sarrafzadeh, Iran.
4. *“Presentation on behalf of Professor Dr. M.S. Swaminathan, Hony, UNESCO Jaques Cousteau Chair for Ecotechnology for Sustainable Rural Development”* by Dr. P.C. Kesavan, M.S. Swaminathan Research Foundation, India.
5. *“UNESCO Chair in Water Resources - Sudan”* by Assoc. Prof. Dr. Sameh Kantoush, Disaster Prevention Research Institute, Kyoto University.
6. *“Ulugbek UNESCO Chair on Physics and Astronomy”* by Prof. Dr. B. Fayzullaev, Department of Physics, National University of Uzbekistan.

Below are the brief summaries of the presentations made during the Workshop.

Title:	1. International Science, Technology and Innovation Centre for South-South Cooperation under the auspices of UNESCO.
Presenter:	Dato Dr. Samsudin Tugirman, Director of ISTIC, Malaysia.
Summary:	<p>This presentation covered the following main points:</p> <p>Description of ISTIC Priority Programmes including:</p> <ul style="list-style-type: none"> ① STI Policy: Many South countries do not have STI Policy to guide national development, those that have do not pay enough attention to SMEs and women. ISTIC Partners – Korean Institute for S&T Policy Evaluation and Planning (KISTEP), UTM Perdana School. ② Inquiry Based Science Education (IBSE) and Science, Technology, Engineering and Mathematics (STEM) Education: Assuring the supply pipeline of creative and discerning STI Professionals. ISTIC Partners with IAP SEP Council, Foundation La main a la pate, France. ③ Women in STI: Many South countries do not have policies on contribution of women in national development. ISTIC partners with NAM Institute for Empowerment of Women (NIEW), UN Women. ④ Maintenance of Infrastructure: Infrastructure project abound in the developing world, but there is little indigenous capacity to maintain them in good working order. ISTIC Partners with Engineering Staff College of India (ESCI) Hyderabad, Institute of Engineers Malaysia (IEM). ⑤ Technopreneurship: Researchers need training in grant application writing and business plan formulation. ISTIC Partners with USAINS, Universiti of Science Malaysia (USM). <p>ISTIC looks forward to strategic collaboration with other Category 2 Centres of UNESCO.</p> <p>Collaboration will be on win-win basis and sharing of resources.</p> <p>Recommend / Propose relevant participants to participate in future ISTIC programmes.</p> <p>Currently, ISTIC is establishing a collaboration with IRIS (Isfahan Regional Centre for Technology Incubators and Science Parks Development, under the auspices of UNESCO, Iran).</p>

Title:	2. Space Technology: A Powerful Tool for Smart Management of UNESCO Properties.
Presenter:	Ms Liu Jie, International Centre on Space Technology for Natural and Cultural Heritage under the auspices of UNESCO (HIST), China.
Summary:	<p>This presentation covered the following main points:</p> <ul style="list-style-type: none"> ① HIST is a Scientific Research Centre that assist developing countries with space technology to improve their capacity for conservation, management and sustainable development of World Heritage sites. ② The task of HIST is also helping developing countries' policy makers and practitioners to strengthen capacity building on the use of space technologies for better conservation and management of the properties. ③ HIST research results have been used for education and publicity. ④ Currently HIST is facing a few challenges such as Advisory Bodies and States Parties that have limited capacity to use space technology. There is a lack of accurate boundary data. Despite a wealth of data and case studies, there is still a lack of robust data at appropriate spatial and temporal resolutions. HIST is in need for powerful computing capacity. HIST also needs to build on the momentum of individual case studies in order to mainstream the use of space technology at the institutional level. ⑤ Smart management of UNESCO properties would benefit from space technologies, particularly the development of Earth observation. ⑥ HIST would like to work closely with related space organizations and other international partners to make more significant contributions for the smart management of UNESCO properties.

Title:	3. An Introduction to ICQHS Activities, Plans and Potentials.
Presenter:	Mr Majid Labbaf Khaneiki, International Centre on Qanat and Historic Hydraulic Structures (ICQHS), Iran.
Summary:	<p>This presentation covered the following main points:</p> <ul style="list-style-type: none"> ① Description of ICQHS mission to recognize the transfer of knowledge and experiences, promotion of information and capacities to all the aspects of Qanat technology and other historic hydraulic structure to fulfill sustainable development of water resources. ② ICQHS focuses on study towards the Destructive Impacts of the Developmental Programmes on Qanats. It also does research on feasibility of generation of electricity out of Qanat water current. A study on new methods for building and maintaining Qanat and methodology of preparing Qanat Atlas with aid of GIS. ③ ICQHS also holds training courses on historic hydraulic structures, Qanat technology and training courses to acquaint the consulting engineers with nomination of historic hydraulic structures on the UNESCO World Heritage list. International training course on Qanat technology and preservation of historic hydraulic structures is also available. ④ ICQHS organized International Scientific gatherings on Traditional Knowledge for Water Resources Management and produced a publication on traditional knowledge for water resources management.

Title:	4. Regional Centre for Integrated River Basin Management, Kaduna, Nigeria (A Category 2 UNESCO Water Centre).
Presenter:	Dr. Omogbemi Omolaju Yaya, RC-IRBM, National Water Resource Institute, Nigeria.
Summary:	<p>This presentation covered the following main points:</p> <ul style="list-style-type: none"> ① RC-IRBM objectives are to facilitate interaction among different scientific and institutional stakeholders and provide support to River Basin Development Authorities or Organizations in the West Africa Region. It also conducts and promotes hydro-informatics, integrated water resources management and socio-economic research. ① RC-IRBM coordinates the implementation of cooperative research projects and studies with regional, federal and local authorities as well as private sectors. ① Currently, RC-IRBM builds and runs networking for information sharing, knowledge exchange and capacity-building in Member States of the West Africa region; as well as organizes training courses, seminars and workshops.

Title:	5. Asia Pacific Centre for Ecohydrology (APCE).
Presenter:	Mr. Hery Harjono, Category 2 Centre of UNESCO / Indonesian Institute of Sciences (LIPI), Indonesia.
Summary:	<p>This presentation covered the following main points:</p> <ul style="list-style-type: none"> ① APCE's focus is on ecological approach to water resources management, which provides sustainable water for the people by harnessing science and technology, education and culture. ① APCE is committed to contribute towards overcoming current and important issues of national, regional and global interest such as poverty, disaster risk reduction and climate change mitigation and adaptation. ① By 2021 APCE aims to develop excellent expertise in: <ul style="list-style-type: none"> ❖ Relationships among ecological pattern and hydrological process; ❖ Disturbance and dynamics in natural and anthropogenic ecology and hydrology; ❖ Ecohydrological approaches to biodiversity conservation, environmental management and ecological restoration; ❖ Integrating hydrology with ecological planning, design and architecture or reverse; ❖ Transdisciplinary studies of regional sustainability from scopes of ecohydrology, ecology, culture (society) or integration of them.

Title:	6. International Knowledge Centre for Engineering Sciences and Technology (IK-CEST).
Presenter:	Dr. Liu Chang, China.
Summary:	<p>This presentation covered the following main points:</p> <ul style="list-style-type: none"> ⌚ IKCEST main task is to establish an international engineering and technology resources hub. IKCEST aims to cooperate with research institutes, enterprises and institutions of higher learning worldwide to build a widely connected international hub for engineering and technology, resources, thus laying a global data foundation from which to operate. ⌚ IKCEST also wants to establish a public data service platform, and to develop the technology for mining and analyzing knowledge from big data. ⌚ IKCEST would like to cooperatively build professional knowledge service, systems, and to build capacity in developing countries. ⌚ IKCEST will foster interdisciplinary engineering talents with big data processing ability. ⌚ IKCEST will assist UNESCO to fulfill its aims and support its action plans.

Title:	7. Isfahan Regional Centre for Technology Incubators and Science Parks Development (IRIS).
Presenter:	Dr. Hasan Khakbaz, Advisor of President of ISTT, Iran.
Summary:	<p>This presentation covered the following main points:</p> <ul style="list-style-type: none"> ⌚ ISTT mission intends to prepare the ground for the development of technology incubators and science parks in the region by providing consultations, training courses and capacity building. ISTT is also facilitating the international relations among science parks and incubators with their counterparts in the region. ⌚ Since its official establishment in May 2010, IRIS has developed different programmes and plans. Among them are: <ul style="list-style-type: none"> ❖ Organizing the official inauguration ceremony and inviting ECO countries ambassadors to attend; ❖ Formation of the secretariat of the Centre; ❖ Allocating a space in ISTT to IRIS and equipping it; ❖ Designing and developing the logo of the centre; ❖ Determining the Governing Board members and Directors of Centre with cooperation of UNESCO; ❖ Organizing seven meetings of Governing Board members and developing the work plan of the Centre; and ❖ Training Workshops (more than 40 National and International workshop with the attendance of international experts from Japan, South Korea, Germany, UK, Spain, Poland, Romania, Malaysia, China, Tunisia, Australia and etc)

Title:	8. UNESCO Category 2 Regional Centre on Groundwater Resources, Education, Training and Research Institute in Kenya.
Presenter:	Mr. Wilson M. Lekoomet, Kenya Water Institute (KEWI), Kenya.
Summary:	<p>This presentation covered the following main points:</p> <ul style="list-style-type: none"> ① Kenya Water Institute (KEWI) objectives include the conduct of research, offering professional training, providing policy advise, facilitating technological transfer and promoting regional collaboration and exchange of experience. ① KEWI is active in training on groundwater for both students and clients in Kenya and the region. KEWI is also doing geological surveys and pursuing degree programmes in Universities in Kenya. It is aimed at improving water / groundwater management capacity within the institution and the country. ① Today, in collaboration with other partners (JKUAT and living Water African Region), KEWI is in the process of establishing a joint five year project whose purpose is to develop capacity for the drilling technology experts. Under this project about twelve experts will be trained at PhD level, twenty at master level and about 150 at advance diploma level. ① Recently, UNESCO undertook a groundwater mapping project in Turkana, which culminated in the discovery of large ground water reservoirs. KEWI and the Category 2 Centre will play a major role in furthering this course and will serve as a hub for capacity development in water related matters in the East Africa Region.

Title:	9. HTCKL Work Related to Science and UNESCO.
Presenter:	Dr. Mohamed Roseli Zainal Abidin, Humid Tropics Centre Kuala Lumpur (HTCKL), Department of Irrigation and Drainage Malaysia.
Summary:	<p>This presentation covered the following main points:</p> <ul style="list-style-type: none"> ① HTCKL objectives are to promote a conducive atmosphere for collaboration through technology and information exchange, education and science. HTCKL helps to increase scientific technologies knowledge about hydrological cycle thus increasing the capacity to better manage and develop the water resources in a holistic manner and to promote and increase scientific and technological knowledge about urban storm water management, ecohydrology, humid tropics and water education. ① HTCKL initiatives provides the execution and implementation of the Post 2015 Development Agenda especially for Sustainable Development Goal No. 6: <i>Ensuring availability and sustainable management of water and sanitation for all.</i> ① UNESCO-IHP Cross-Cutting Programmes related to HTCKL includes: <ul style="list-style-type: none"> ❖ UNESCO Switch-in-Asia: Urban Water Management; SWITCH – Sustainable Water Management Improves Tomorrow's Cities Health; ❖ AP Friends; Asia Pacific Flow Regimes from International Experimental and Network Data; ❖ UNESCO-HELP River basin (Langat River): Hydrology for the Environment, Life and Policy; ❖ Integrated Water Resources Management (IWRM). ① In IHP-VII Strategic Plan 2014-2021, HTCKL is involved in: <ul style="list-style-type: none"> ❖ Water related Disasters and Hydrological Change; ❖ Addressing Water Scarcity Quality; ❖ Water and Human Settlements of the future; ❖ Ecohydrology, Engineering Harmony for a Sustainable World; and ❖ Water Education, Key for Water Security

Title:	10. IPCC Fifth Assessment Report, Lima Climate Action High Level Session, Lima Peru.
Presenter:	Dr Rajendra K. Pachauri, India (via teleconference).
Summary:	<p>This presentation covered the following main points:</p> <ul style="list-style-type: none"> ① Description of the Intergovernmental Panel on Climate Change (IPCC) Fifth Assessment Report. ① Continued warming increases the risk of severe, pervasive and irreversible impacts. ① Risks are unevenly distributed and are generally greater for disadvantaged people and communities in countries at all levels of development. ① People who are socially, economically, culturally, politically, institutionally or otherwise marginalized are especially vulnerable to climate change. ① Ambitious mitigation is affordable and translates into delayed but not foregone growth (entails losses in global consumption of median value 1.7% in 2030). ① Estimated costs on mitigation do not account for the benefits of reduced climate change. ① Many impact such as loss of human lives, cultural heritage and ecosystem services are difficult to value and monitor and thus they are poorly reflected in estimates of losses.

Title:	11. Environmental Management and Infrastructure Development Engineering, Saitama University Japan.
Presenter:	Prof. Dr. Matsumoto Yasunao, Japan.
Summary:	<p>This presentation covered the following main points:</p> <ul style="list-style-type: none"> ① Description of the UNESCO Chair at Saitama University Japan on Environmental Management and Infrastructure Development Engineering. ① The Chair's objective is to promote collaboration between the researchers and the research team of the university and other universities and institutions. It also attracts prospective students to our existing International Graduate Programme in Civil and Environmental Engineering. The Chair allows sharing of experience and knowledge in environmental management and infrastructure development engineering research and development. ① Saitama University Research Groups are as follows: <ul style="list-style-type: none"> ❖ Geotechnical and Geosphere Research Group; ❖ Earthquake Disaster Prevention Mitigation Group; ❖ Transporting & Planning Group; ❖ Structural Engineering Mechanics and Materials Group; and ❖ Hydraulic and Environment Engineering Group.

Title:	12. UNESCO Chair on Water Reuse, University of Tehran.
Presenter:	Prof. Dr. Mohammad-Hossein Sarrafzadeh, Iran.
Summary:	<p>This presentation covered the following main points:</p> <ul style="list-style-type: none"> ⌚ The water crisis in the world involves: <ul style="list-style-type: none"> ❖ 1.1 billion people live without clean drinking water ❖ 2.6 billion people lack adequate sanitation ❖ 3900 children die every day from water borne diseases ⌚ UNESCO Chair on Water Reuse, University of Tehran is involved in post graduate teaching programmes, training, research and institutional development (strengthening of information / library services, laboratories and etc.) ⌚ Among its objectives are gathering the available expertise in the field of water reuse and facilitate information transfer. It also creates network between water institutions to facilitate exchange of experience and information nationally, regionally and internationally. Furthermore, it conducts and contributes to workshop and conferences of national, regional and international nature to push forward exchange of experience. ⌚ University of Tehran is also engaged in producing technological developments for water reuse, saving water by recycling and ground water recharge. Developing low-cost methods for sanitary disposal of municipal wastewater. Activities to reduce pollution of rivers and other surface water and provide a reliable water supply to farmers.

Title:	13. Presentation on behalf of Professor Dr. M.S. Swaminathan, Hony. UNESCO Jaques Cousteau Chair for Ecotechnology for Sustainable Rural Development.
Presenter:	Dr. P.C. Kesavan, M.S. Swaminathan Research Foundation, India.
Summary:	<p>This presentation covered the following main points:</p> <ul style="list-style-type: none"> ⌚ Green Revolution and the Paradox of Grain Mountains and Hungry Millions. <ul style="list-style-type: none"> ❖ Green Revolution (GR) provided food security at the national level; ❖ GR did not create more on-farm and off-farm livelihoods; ❖ GR not integrated with sustainable rural development; and ❖ GR is largely monocropping; loss of agrobiodiversity. ⌚ Ecotechnology Revolution <ul style="list-style-type: none"> ❖ Blending frontier technology with traditional wisdom and ecological prudence. These then become eco-technologies with pro-nature, pro-poor and pro-women orientation; ❖ Ecotechnologies involve concurrent attraction to Ecology, Energy, Equity, Economics, Employment and Ethics; and ❖ Ecotechnologies are in action in MSSRF's Biovillages.

Title:	14. UNESCO Chair in Water Resources - Sudan.
Presenter:	Assoc. Prof. Dr. Sameh Kantoush, Disaster Prevention Research Institute, Kyoto University.
Summary:	<p>This presentation covered the following main points:</p> <ul style="list-style-type: none"> ① UNESCO-CWR mission is to build, enhance and strengthen capacity for sustainable water resources development and management through education, research, consultancy and knowledge dissemination. ① CWR also facilitate coordinate, collaborate, cooperate among universities, research institutes & centres at national, regional and international levels. ① It also promotes integrated research system and multi-interdisciplinary approach. ① UNESCO-CWR serves the local, regional “the Nile Basin, Eastern, Central Africa and Shared Aquifers” AWA International water community.

Title:	15. Ulugbek UNESCO Chair on Physics and Astronomy.
Presenter:	Prof. Dr. B. Fayzullaev, Department of Physics, National University of Uzbekistan.
Summary:	<p>This presentation covered the following main points:</p> <ul style="list-style-type: none"> ① The Ulugbek UNESCO Chair promotes an integrated system of research, training, information and documentation in the field of Physics and Astronomy. ① Development of the integration into postgraduate study programmes of new information and communication technologies. ① Publication of new curricular materials in the field of Physics and Astronomy. ① Organization of scientific conference and round-table discussions. ① The Ulugbek UNESCO Chair is acting in close cooperation with Nuclear and Theoretical Physics Chair of Department of Physics, the Uzbekistan National University, Tashkent. Many courses are delivered jointly for common students. The UNESCO Chair invites international speakers to give talks at common seminars.

The second day of the workshop included a dialogue session, with breakout group discussions where each group discussed on the assigned topic and presented findings of their group deliberations. Three groups were formed for that purposes.

The topics assigned to the groups were:

1. Developing a UNESCO Family Strategic Plan for Asia and the Pacific,
2. Scoping UNESCO Chairs in Malaysia; and
3. Delivering together.

The group discussion was guided by a series of questions based on the topics assigned to each group.

The full reports of the group discussion are given in the Appendix 3.

GROUP 1: Developing a UNESCO Family Strategic Plan for Asia and the Pacific.

QUESTION 1: Which are the strengths of UNESCO and its Natural Sciences Family in Asia and the Pacific?

The Centres and Chairs under Natural Sciences Family are focused on very important issues relevant to the society and environment. The fields in which these Centres and Chairs focus include natural disasters, hydrology, food security, water resources, water and culture, eco-hydrology, ground water, oceanography, biology and etc.

Members of this discussion group suggested organizing a Regional Steering Committee meeting (RSC) every year hosted by member countries (International Hydrological Programme (IHP), National Committee and Category 2) and presentation of reports and cross cutting programmes (e.g. ASIAPACIFIC FRIEND, HELP BASIN, UNESCO SWITCH-URBAN WATER MANAGEMENT, INTEGRATED WATER RESOURCE MANAGEMENT (IWRM) POST 2015).

In addition, UNESCO Jakarta office has an important role to assist in creating more collaborative programmes and activities in knowledge sharing on scientific research and sustainable development between UNESCO Category 2 Centres and Chairs and their stakeholders. There were consensus of building networks for strengthening partnership between the UNESCO Centres in Asia and the Pacific with the Malaysian scientific network. This collaboration will result in funds raising strategies / funding mechanism and joint research activities among the partners (Paris Link).

QUESTION 2: How to build a strong and an efficient regional sciences network?

UNESCO Centres and Chairs shall utilize a variety of interactive tools and approaches to maintain a sustainable internal communication with sufficient frequency of updates between Asia and the Pacific regional science network.

Currently, UNESCO has developed an integrated collaborative platform for the UNESCO Water Network using existing UNESCO's UNESTREAM shared point based platform. This platform shall serve as the primary mechanism for sharing feedback, information, documents and news within the network.

The establishment of groups of professionals in diverse fields of natural sciences will allow members of Centre and Chairs to remain up-to-date and encourage collaboration within these networks, e.g. International Hydrological Programme (IHP), Intergovernmental Oceanographic Commission (IOC), Man and the Biosphere Programme (MAB). An active participation in this common communication platform is highly encouraged to ensure timely updates and content quality.

The group discussion also suggested setting up twinning programmes between Chairs and Centres with the aim of advanced research, training and programme development, e.g. Integrated Water Resource Management (IWRM) which will promote remote sensing application to climate change studies within Southeast Asia countries and China. This initiative will encourage cooperation through transfer of knowledge across borders.

Centres could also facilitate and organize national and regional training, short courses and knowledge sharing workshop that can essentially strengthen particular fields by training human resources and applying state-of-the-art technologies and tools, e.g. training the field of eco-hydrology.

Staff Exchange programme was also suggested since it has always built bridges between disciplines and the scientists. The exchange will aim to stimulate cutting edge research and sharing scientific knowledge.

Collaborative engagement in enhancing communication and information sharing between members is important especially to maintain a high level of engagement with members' stakeholders. It was suggested to make significant efforts to establish an effective communication channel, e.g. website to convey progress, exchange knowledge or success stories to adverse impact.

QUESTION 3: How can UNESCO support the Natural Sciences Category 2 Centres and Chairs?

UNESCO has made significant efforts to facilitate collaboration with various UN Agencies such as Intergovernmental Panel on Climate Change (IPCC), United Nations Development Programme (UNDP) and other UN Programmes.

The Centres and Chairs expressed a desire to network and collaborate with one another and expressed interest in establishing a mechanism for cooperation. They would like to see UNESCO take a leading role in bringing them together, so they can further develop cooperation mechanism between themselves and increase the visibility of their partnership. This however has a cost implication, so funding mechanisms need to be explored.

GROUP 2: SCOPING UNESCO CHAIRS IN MALAYSIA.

QUESTION 1: Which are the key strengths of Malaysian science stakeholders?

This group mainly discussed on the strengths and weaknesses of UNESCO Natural Sciences Centres and Chairs in Malaysia. The group categorized different fields of natural sciences research according to the strengths and the weaknesses of the Malaysian stakeholders. The Malaysian stakeholders have reasonably good exposure to few areas including sustainable energy, water resources, climate change, disaster risk reduction, urban environment, ecological economics and water-energy-food nexus.

The group agreed that Malaysia is relatively competent in water resource management and climate change. In water resource management, Malaysia has numerous government agencies including Department of Irrigation and Drainage (DID), Economic Affairs Unit (UPEN), Ministry of Energy, Green Energy and Water (KETTHA), National Water Services Commission (SPAN) who work hand-in-hand with water companies e.g. Syarikat Bekalan Air Selangor Sdn. Bhd. (SYABAS) etc.

As for climate change, strong collaborations exist among universities (Universiti Teknologi Malaysia (UTM), Universiti Kebangsaan Malaysia (UKM), Universiti Sains Malaysia (USM), Universiti Malaya (UM) and Universiti Malaysia Terengganu (UMT)), Malaysian Meteorological Department, National Hydraulic Research Institute of Malaysia (NAHRIM), the Ministry of Natural Resources and Environment (MNRE) and Ministry of Energy, Green Energy and Water (KETTHA).

QUESTION 2: How can Malaysia contribute to a strong and efficient regional science network?

Strategic partnership with UNESCO family centres (e.g. Category 2 Centres) should be established or enhanced to enable higher level of knowledge exchange, resources sharing and human capital development. Such efforts will result in more significant achievements in addition to wider coverage of activities and collaboration.

The deliberation of this group also resulted in suggestions of having a clear and generic strategy that should be based on multidisciplinary, problem-solving and outcome-based approach at local and regional levels. They also highlighted that the academic institutions have an active and leading role in solving natural resources problems and the solutions can be in line with Malaysian Higher Education Blueprint-2015 by emphasizing on the quadruple helix.

The group also demanded for establishing and implementing a Sustainability Science Network and programme across region. Ultimately, all collaborations, networking, strategies and activities must be in line with SDGs to ensure effective outcome on regional and global scale.

QUESTION 3: How can UNESCO Natural Sciences family support Malaysian stakeholders to deliver the Post 2015 Development Agenda?

UNESCO Science family can support through development and implementation of Sustainable Sciences Network across region and programme. Furthermore, the UNESCO family can act as a “big brother” to bring together existing centres and chairs to promote cooperation especially in the form of technology and knowledge transfer.

Funding is also essential, not only to the Malaysian stakeholders but also to other parties in which the UNESCO Science family can support by facilitating funding mechanism.

GROUP 3: DELIVERING TOGETHER

Question 1: What are the key areas for cooperation in Sciences in the Post-2015 Development Agenda framework?

There are four key areas to be focused on. The first one is biodiversity and ecology conservation. With intense development, loss of biodiversity and ecology are inevitable. However, critical areas for biodiversity and ecology protection should be identified and protected. The cooperation in this aspect should inform stakeholders and policy makers in the importance of conserving such areas, leading to a more sustainable development.

Next is the renewable energy. In years to come, traditional energy sources such as petroleum and coal would be depreciated and before that happens, renewable energy should receive utmost attention. The cooperation in this area should be amplified and promoted as the next evolution of energy sources, not just alternative. Such effort would also enable technological transfer to help achieve renewable energy target. Renewable energy should be marketed as affordable, reliable, sustainable and modern energy for all.

Transboundary water is also an important issue to be highlighted. The issue become very complicated when there is more than one country claiming rights to water sources (especially lake and river water basin). Transboundary cooperation should exist to solve the issue without political influence and violence.

A larger entity such as a river commission could be established to hold talks, draft legal agreements and discuss this transboundary issue for the sake of survival.

The last issue is food security and livelihoods. Specific projects need to address food security and livelihood issues especially concerning rural communities. Critical issues that directly related to food security such as food source availability, clean water access and power (energy) access need to be investigated. However, food production should not only address the issue of demands but also retain the essential ecological integrity of production systems.

Question 2: How to implement joint activities in sciences to support the SDGs?

Action plans should be devised in broader coverage to reach the goals of SDGs. Among those shortlisted were research activities, community programmes and education programmes. Such activities or programmes should be knowledge transfer programmes so that it would be a win-win scenario for the different parties. For example, research in water quality issue would improve the livelihood of the community. The governance aspect should also be emphasized. For example, awareness programme specifically for women and youth, as well as gender equality. Apart from professional, women and youth should be engaged in community-based sciences to increase the awareness and also knowledge. A specific web portal should also be established to act as knowledge centre and particularly as a gateway to connect to the modern youth. Massive open online course (MOOCs) should also be encouraged as part of the freely available education for the masses.

Question 3: How to link Asia and the Pacific with Africa to support South-South cooperation in Sciences?

The most important aspect to link between these different entities is the structural arrangement (committees). Such solid structure should include secretariat and/or taskforce for joint cooperation. The establishment of these secretariat with representative from each regions of interest will ensure seamless and more efficient “bring-it-together” collaborative efforts.

To ensure accurate and up-to-date information dissemination, a web portal should be available and frequently updated so that all participants in all regions are aware of such efforts and activities. With proper support and promotion, this portal will even reach out to more potential participants (visibility) and collaborators, especially from untapped regions or countries.

CONCLUSIONS AND RECOMMENDATIONS

- The current 15 UNESCO Natural Sciences related Category 2 Centres and 28 UNESCO Natural Sciences related Chairs in Asia and the Pacific Region are focusing on very important issues relevant to the society and environment. The fields in which these Centres and Chairs are focusing include: historical hydraulic structures, humid tropic hydrology and water resources, ecohydrology, urban water management, erosion and sedimentation, biotechnology, space technologies for cultural and natural heritage, geochemistry and others. These Centres and Chairs are aligned with the 17 SDGs, e.g. poverty reduction, food security, education quality, gender equity, sustainable management of water, affordable energy, sustainable economic growth, sustainable industrialization, resilient and sustainable cities, ecosystem protection, and global partnership.
- The workshop successfully achieved the targets of creating more collaborative programmes and activities of knowledge sharing on scientific research and sustainable development between UNESCO Category 2 Centres and Chairs. There was consensus of building networks for strengthening partnerships between the UNESCO Centres in Asia-Pacific, Africa and the Malaysian scientific network. This collaboration will result in fund raising strategies and joint research activities among the partners. It was agreed that the investment in science, food and water security, renewable energy, water and natural resources management, disaster risk reduction and resilience to climate change will achieve regional and global peace and prosperity. It is revealed that the UNESCO Centres and Chairs are coordinating in implementing the collaborative research projects and studies with regional, federal and local authorities as well as with the private sector. The individual sectors and the society as whole are the main beneficiaries of the joint projects completed under these Centres and Chairs. However, few regions and countries are still lacking of such platforms where joint research and collaborative projects can be carried out and benefits can be transferred to the society and individual sectors. Some of the areas of research identified in the workshop include disaster risk reduction and management, sustainability science and water demand management.

- There was a suggestion on creating a new Chair in Malaysia regarding Disaster Risk Reduction and Management (DRRM). The government is concerned about different types of disasters like flood, landslide, earthquake, tsunami and the associated of those disasters in Malaysia. The proposed Chair will be the most effective response to mitigate any types of catastrophe in Malaysia through collaboration among the different Centres and Chairs in South-South cooperation.

Practice of reducing disaster risks can be done through systematic efforts by collaboration and research among the different Chairs of UNESCO worldwide. Reducing exposure to hazards, lessening vulnerability of people and property, wise management of land and other natural resources, improving preparedness and early warning for the natural disaster events can be achieved by strong relationship of South-South cooperation.

- It was also suggested to create a new Category 2 Centre in Malaysia on Sustainability Science (CMSS). UNESCO Natural Sciences Family can support the Malaysian science stakeholders by developing and implementing a sustainability science network and programme across region, by promoting cooperation with existing Centres and Chairs by technology and knowledge transfer and by facilitating funding mechanisms. It is thus, recommended to have a UNESCO Category 2 Centre on Sustainability Science in Malaysia.

The proposed Centre can be established in Malaysia for developing joint projects with the existing Regional Centres and the Malaysian scientific network. Sustainability science is an emerging field of interdisciplinary research that fosters shared prosperity and poverty alleviation while protecting the environment. This field draws from multiple disciplines of the natural, social, medical and engineering sciences, from the professions and from practical field experience in business, government, and civil society.

- Final Recommendations and contribution to the “Kuala Lumpur Statement”:
1. The UNESCO Natural Sciences related Category 2 Centres and Chairs in Asia and the Pacific Region are highly encouraged to build a strong regional science network to promote interaction, knowledge sharing and joint activities.
 - A good example is the cooperation between ISTIC (Malaysia) and IRIS (Iran) in technopreneurship training for research scientists and engineers, in Iran in 2015.
 - Iranian UNESCO chairs and centres will create a web-based network for coordination and cooperation between them, including periodic meetings to find common fields of interest and define joint projects. If this model works in Iran, it will be expanded to UNESCO centres and chairs the other regions.
 2. The network of UNESCO Natural Sciences related Category 2 Centres and Chairs in Asia and the Pacific region will encourage active links with Africa to strengthen the South-South and triangular cooperation in STI.
 - For example HTCKL (Malaysia) and RC-IRBM (Nigeria) active engagement and joint programmes on water resources management.
 3. The UNESCO Regional Science Bureau for Asia and the Pacific will continue to mobilize and provide necessary support to the UNESCO’s Natural Sciences family in the region for the successful delivery of the Sustainable Development Goals in the Post-2015.

APPENDIX 1 - Workshop Programme

The Workshop Programme is as follows:

Day 1: 26 May 2015		
12 :30 -13.30	Registration and lunch at Taman Sari Outlet	
[Session 1] Opening		
13:30 – 14:30	Opening, welcome remarks and Souvenir Presentation	<ol style="list-style-type: none"> 1. Dato Ir. Lee Yee Cheong, Chairman, ISTIC Governing Board 2. Prof. Mohamed H. A. Hassan, Chairman, Council of the United Nations University (UNU) 3. Prof. Dr. Ahmad Fauzi Ismail, Deputy Vice Chancellor (Research and Innovation) Universiti Teknologi Malaysia 4. Mr. Shahbaz Khan, OIC UNESCO Office Jakarta 5. Mr. Mohd Khairul Adib bin Abdul Rahman, Secretary General of The Malaysian National Commission for UNESCO
[Session 2] Setting the scene		
14:30-14:45	UNESCO Natural Sciences Regional Support Strategy 2014-2021	Mr. Shahbaz Khan, OIC UNESCO Office, Jakarta
14:45-15:00	Malaysian Higher Education Blueprint	Prof. Dato' Ir. Dr. Mohd Saleh Jaafar, Adviser / Consultant on Malaysia Higher Education Blueprint
15:00-15:15	Post-2015 Development Agenda and STI	Dato Ir. Lee Yee Cheong, Chairman, ISTIC Governing Board
15:15-15:45	Group photo and <i>Coffee break at Urban Hotel Lobby</i>	
[Session 3] Introduction to UNESCO Category 2 Centres		
15:45-17:00	Presentations from Directors of UNESCO Category 2 Centres for Natural Sciences	Dato Samsudin, ISTIC, Malaysia Ms Jie, HIST, China Mr Labbaf, ICQHS, Iran Dr Yaya, RC-IRBM, Nigeria Mr Harjono, APCE, Indonesia Dr Chang, IKGEST, China Dr Khakbaz, IRIS, Iran Mr Lekoomet, KEWI, Kenya Dr Roseli, HTCKL, Malaysia

[Session 4] Introduction to UNESCO Chairs		
17:00-17:50	Presentations from UNESCO Chairs for Natural Sciences	Dr Pachauri, India Dr Matsumoto, Japan Prof. Sarrafzadeh, Iran Dr Kesavan, India Dr Kantoush, Sudan Dr Fayzullaev, Uzbekistan
17:50-18:30	Q&A Discussion	
20:00	<i>Welcome Dinner at Mahkota 3 (Istana Hotel)</i>	<i>By UTM</i>

Day 2: 27 May 2015		
08:00-08:30	<i>Arrival and installation at Safir (1) meeting room</i>	
[Session 5] Breakout Dialogue		
08:30-09:30	1. Developing a UNESCO Natural Sciences Family Strategic Plan for Asia and the Pacific 2. Scoping UNESCO Chairs and Category 2 Centres in Malaysia 3. Delivering Together	Moderators: 1. Prof. Dr. Zulkifli Yusop (UTM) 2. Prof. Dr. Arshad Ahmad (UTM) 3. Assoc. Prof. Dr Marlinda (UNITEN)
09:30-10:00	Reporting from Breakout Dialogue	Rapporteurs from each breakout discussion 1. Assoc. Prof. Dr. Sharif Moniruzzaman Shirazi (UTM) 2. Dr. Noorul Hassan Zardari (UTM) 3. Assoc. Prof. Dr. Shareeshivadasan A/L Chelliapan (UTM)
10:00-10:15	<i>Coffee break at Safir Foyer</i>	
[Session 6] Key-findings		
10:15-11:00	Discussion	Moderator Prof. Dr. Zulkifli Yusof, UTM
[Session 7] Closing		
11:00-11:10	Conclusions: Plan of action and follow-up	Mr. Shahbaz Khan, OIC UNESCO Office, Jakarta
11:10-11:30	Closing Remarks	1. Dr. Mohamed Roseli Zainal Abidin, Director of Humid Tropics Centre, Kuala Lumpur (HTCKL) 2. Flavia Schlegel, UNESCO Assistant Director General for Natural Sciences
12:00	<i>Lunch at Taman Sari Outlet</i>	

APPENDIX 2 – Concept note

Promoting Interaction and Knowledge Exchange between UNESCO Natural Sciences related Centres and Chairs in Asia and the Pacific

Background

The current year 2015 is a critical moment globally for the transition into the Post-2015 Development Agenda as new framework for global development efforts. With the mandate to promote International cooperation in education, the sciences, culture, communication and information, UNESCO's contribution to the Post-2015 Development Agenda is essential. UNESCO is mobilizing all its strengths for building the sustainable, inclusive, knowledge societies needed for the century ahead.

The draft of the Sustainable Development Goals (SDG) 'outcome document' includes 17 goals and 169 targets, where the universality of Science and its critical role for poverty eradication and sustainable development has been highlighted. As stated by the UNESCO Director-General in the High Level Segment of ECOSOC, "*investment in science is investment in food and water security, renewable energy, disaster risk reduction and resilience to climate change. It is about peace and prosperity for all.*" Moreover, networking will be critical in the implementation of the Post-2015 Development Agenda, since the proposed SDG no. 17 refers to "strengthen the means of implementation and revitalize the global partnership for sustainable development".

The programmes of UNESCO in Natural Sciences have been able to expand their cooperation beyond the network of the traditional intermediaries – what may be called the "UNESCO Natural Sciences family": National Commissions, UNESCO Chairs, Category 2 Institutes and Centres, clubs and associations, National Committees of intergovernmental programmes and specialized networks, such as the Associated Schools Project Network. Within this variety of partners, Category 2 Centres and Chairs play an important role as they expand the capacities and effectiveness to carry out activities, promote the outreach, impact and visibility at all levels, broaden the support base and mobilize resources and create synergies among all communities of UNESCO.

UNESCO Category 2 Centres and Chairs are independent of UNESCO and are associated with the Organization through individual arrangements, as approved by the UNESCO governing body - the General Conference -. These Centres and Chairs perform research, advanced training, contribute to the execution of UNESCO's programmes and increase the participation of national and regional institutions in UNESCO's work.

In Asia-Pacific Region, the Category 2 Centres and Chairs have the capacity to provide a tangible contribution towards the realization of not only 'Natural Sciences' objectives and priorities as stated in the UNESCO Medium Term Strategy but also towards the implementation of the SDGs in the Post-2015 framework. The Category 2 Centres and Chairs can contribute by expanding and strengthening the UNESCO's global and regional outreach, and providing a collective impact, given the competencies, scope of expertise, as well as training opportunities that they offer. Their dissemination is also an added value to strengthen North-South, South-South and triangular cooperation.

Scope of the workshop

This workshop is organized in order to promote interaction and knowledge exchange for strengthening South-South cooperation between Natural Sciences Category 2 Centres and Chairs in the Asia-Pacific region. A strong and efficient Science network in the region will be critical to support the implementation of the Post-2015 Development Agenda in the upcoming years.

The following actions will be the outcomes of the workshop:

- Providing an overview of UNESCO's Medium Term Strategy globally and the Regional Bureau's Science Support Strategy in the Asia-Pacific (2014-2021).
- Providing an overview of UNESCO's Natural Sciences Category 2 Centres and Chairs in Asia-Pacific and their contribution to programmes and activities of UNESCO in the Post-2015 Development Agenda framework.
- Identify potential gaps and overlaps among the Centres and Chairs.
- Identify formats for collaboration and knowledge exchange on science research and sustainable development.
- Building networks for strengthening partnerships between the Category 2 Centres and Chairs in Asia-Pacific and Africa.
- Initiate reflection for the development of a regional strategy on funds raising and joint actions to support the Post-2015 Development Agenda.

This workshop is organized with the valuable support of the Malaysian Funds-in-Trust.

APPENDIX 3 – Outcomes from Breakout Discussion

GROUP 1: Developing a Strategic Plan for UNESCO Natural Sciences Family in Asia and the Pacific

<p style="text-align: center;">Regional Workshop "PROMOTING INTERACTION AND KNOWLEDGE EXCHANGE BETWEEN UNESCO NATURAL SCIENCES RELATED CENTRES AND CHAIRS IN ASIA AND THE PACIFIC" 27th May 2015 Group 1 Developing a Strategic Plan for UNESCO Natural Sciences Family in Asia and the Pacific</p>	<p>Which are the strengths of UNESCO and its natural sciences family in Asia and the Pacific?</p> <ol style="list-style-type: none"> 1. Natural disaster, hydrology, food security, water resources, water and culture, eco-hydrology, ground water, oceanography, biology etc. 2. Regional Steering Committee meeting (RSC) every year hosted by member countries (national IHP, category 2) and presentation of report, cross cutting programmes e.g. ASIA PACIFIC FRIEND, HELP BASIN, UNESCO SWITCH-URBAN WATER MANAGEMENT, IWRM POST 2015. 3. UNESCO JAKARTA OFFICE always communicate with member countries, funding to organise activities (Paris link). 4. Collaboration and networking programme with member countries.
<p>How to build a strong and efficient regional sciences network?</p> <ol style="list-style-type: none"> 1. Joining with UNESCO water collaborative platform – UNESTEAMS website 2. To categorise and network for diverse fields of natural sciences in special groups e.g. IOC, man and biosphere, IHP etc. 3. Twinning programme e.g. IWRM (e.g. Langat River Basin & Citarum River), Remote Sensing application to climate change studies within South-East Asia countries and China 4. To organize training and workshops for a particular field e.g. training on eco-hydrology 5. Ex-change programme between Natural Sciences Category 2 Centres and Chairs e.g. staff exchange 	<p>6. Special column for information sharing for the UNESCO website e.g. forum, activities, establishment of international knowledge centre</p> <p>How can UNESCO support the Natural Sciences Category 2 Centres and Chairs?</p> <ol style="list-style-type: none"> 1. UNESCO to facilitate the collaboration with various UN program e.g. water, IPCC, UNDP and other UN programme. 2. To set-up mechanisms to promote Natural Sciences Category 2 Centres and Chairs in Asia Pacific Region as a whole as well as exchanges among them. 3. To help explore the possibilities for collaborative research programme. 4. To fund some activities and networking.

GROUP 2: Scoping UNESCO Natural Sciences Centres and Chairs in Malaysia

<p style="text-align: center;">REGIONAL WORKSHOP Promoting Interaction and Knowledge Exchange between UNESCO Natural Sciences related Centres and Chairs in Asia and the Pacific 26-27 May 2015, Hotel Istana, KL SESSION 5: BREAKOUT DIALOGUE – 27 May 2015</p> <p>Group 2: Scoping UNESCO Natural Sciences Centers and Chairs in Malaysia</p> <p>Q-1: Which are the key strengths of Malaysian science stakeholders?</p> <p>Potential areas:</p> <ul style="list-style-type: none"> • Sustainable Energy • Water resource • Climate change • Disaster risk reduction • Urban environment • Ecological economics • Water-energy-food nexus, etc. 	<p>Group 2: Scoping UNESCO Natural Sciences Centers and Chairs in Malaysia</p> <p>Focus Areas:</p> <table border="1"> <thead> <tr> <th>Area</th> <th>Strength level</th> <th>Stakeholders</th> <th>Gap</th> <th>Action plan</th> </tr> </thead> <tbody> <tr> <td>Sustainable Energy</td> <td>Good</td> <td>SEDA, GETTHA, EC</td> <td> <ul style="list-style-type: none"> • High dependency on coal and fuel, • Less than 1% renewable energy • No holistic policy </td> <td>PE, Energy efficiency program</td> </tr> <tr> <td>Water resource management</td> <td>Good</td> <td>ICD, UPTA, GETTHA, SPAH, Water companies</td> <td> <ul style="list-style-type: none"> • Weak in demand management, • Poor in recycling and reuse, • High lobby • Poor state and federal coordination, • Environment versus economic </td> <td>Regional WRS study, R&D Policy, NPL, WERS</td> </tr> <tr> <td>Climate change</td> <td>Good</td> <td>Interagency, IANRIS, MAMBI, GETTHA, Universities</td> <td> <ul style="list-style-type: none"> • Low awareness • Lack of resources for adaptation, mitigation and policy implementation • Lack of technology </td> <td>IPCC, Professor for Malaysia Climate change policy for Malaysia</td> </tr> <tr> <td>Disaster risk reduction and management</td> <td>Good</td> <td>NSC (MAMBI)</td> <td>To be discussed and listed later</td> <td></td> </tr> <tr> <td>Ecological economics</td> <td>Good</td> <td>University</td> <td>To be discussed and listed later</td> <td></td> </tr> <tr> <td>Urban Environment</td> <td>Moderate</td> <td></td> <td>To be discussed and listed later</td> <td></td> </tr> </tbody> </table>	Area	Strength level	Stakeholders	Gap	Action plan	Sustainable Energy	Good	SEDA, GETTHA, EC	<ul style="list-style-type: none"> • High dependency on coal and fuel, • Less than 1% renewable energy • No holistic policy 	PE, Energy efficiency program	Water resource management	Good	ICD, UPTA, GETTHA, SPAH, Water companies	<ul style="list-style-type: none"> • Weak in demand management, • Poor in recycling and reuse, • High lobby • Poor state and federal coordination, • Environment versus economic 	Regional WRS study, R&D Policy, NPL, WERS	Climate change	Good	Interagency, IANRIS, MAMBI, GETTHA, Universities	<ul style="list-style-type: none"> • Low awareness • Lack of resources for adaptation, mitigation and policy implementation • Lack of technology 	IPCC, Professor for Malaysia Climate change policy for Malaysia	Disaster risk reduction and management	Good	NSC (MAMBI)	To be discussed and listed later		Ecological economics	Good	University	To be discussed and listed later		Urban Environment	Moderate		To be discussed and listed later

APPENDIX 7

Presentation on “Space Technology: A Powerful Tool for Smart Management of UNESCO Properties”

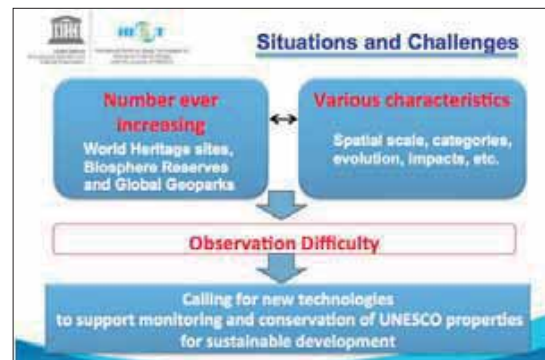

by

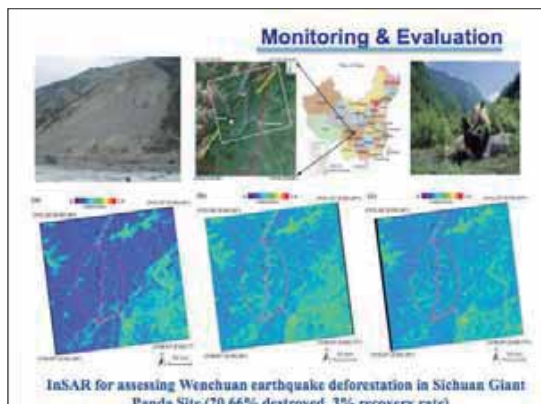

Ms Liu Jie, International Centre on Space Technology for Natural and Cultural Heritage under the auspices of UNESCO (HIST), China

**Space Technology:
A Powerful Tool for Smart Management
of UNESCO Properties**

LIU Jie

May 26, 2015 Kuala Lumpur, Malaysia

Open Initiative

In 2001, UNESCO and ESA jointly launched the "Open Initiative on the use of space technologies to support the World Heritage Convention".

The Main Goals:

1. Space for World Heritage sites (From Space 2 Place)
2. Space for the people managing the sites (Space 4 People)
3. Space for our young generation (Space 4 Young Generation)

2. HIST: A New Platform for UNESCO Properties

On 24 July, 2011, the International Centre on Space Technologies for Natural and Cultural Heritage under the auspices of UNESCO was established in Beijing.

The center is hosted by and built on the premises of Institute of Remote Sensing and Digital Earth (IIRADT). Its aim is to provide technical services to UNESCO and its less developed member states on using space technologies for UNESCO properties, namely World Heritage Sites, World Biosphere Reserves and Global Geoparks.

Institute of Remote Sensing and Digital Earth (IIRADT), Chinese Academy of Sciences

IIRADT is one of the world's best Earth Observation Institutions. Staffed by 1200 researchers and graduate students, it possesses large scientific facilities, including two remote sensing airplanes and three satellite ground stations, able to receive satellite remote sensing data that geographically cover 70% of Asia.

Hosting Institute

RADI Ground Stations

European Countries	ESA: ESA-1, ESA-2, ESA-3
	ESA: ESA-4, ESA-5
	ESA: ESA-6, ESA-7
Asian Countries	CS: CS-1, CS-2, CS-3
	CS: CS-4, CS-5
	CS: CS-6, CS-7
Africa	ESA: ESA-8, ESA-9
	ESA: ESA-10, ESA-11
	ESA: ESA-12, ESA-13

2.5M scenes, 300TB

Tasks of HIST

- **Scientific Research:** Assisting developing countries with space technologies to improve their capacity for the conservation, management and sustainable development of World Heritage.
- **Capacity Building:** help developing countries' policy makers and practitioners to strengthen capacity building on the use of space technologies for better conservation and management of the properties;
- **Education and Publicity:** The research results will be used for education and publicity.

Atlas of Remote Sensing for World Heritage: China

Suspected relics along Silk Road

Remote Sensing for Environment of Angkor Site

MOU between HIST and APSARA during the 37th session of the UNESCO World Heritage Committee in Phnom Penh, June 2013

Cambodian Deputy Prime Minister H. E. Dr. Sok An met with the HIST/RADI delegation

Angkor Site and its environment

Low-cost "virtual ground station" for Smart Management

- > 2Mbit/s internet connection
- > few computers and a large monitor or TV screen
- > Distributing real time quick-look imagery of high resolution satellite

RADI's three stations receive data from satellites covering 70% of Asia

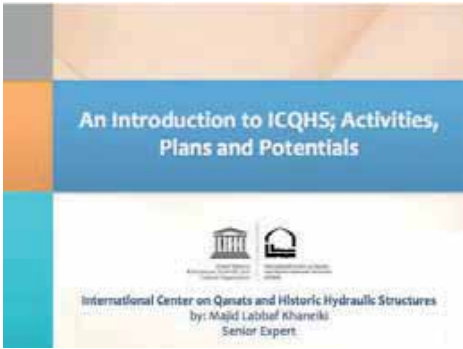

Installed in Kirgizstan, Mongolia, Beijing, and Canada.

Capacity Building

October 2012, the 1st International Workshop on Space Technologies for Management and Conservation of World Heritage took place in Beijing. 20 people from 15 developing countries in Asia participated in the Workshop.

APPENDIX 9

Presentation on “Regional Centre for Integrated River Basin Management, Kaduna, Nigeria (A Category 2 UNESCO Water Centre)”

by

Dr. Omogbemi Omolajo Yaya, RC-IRBM, National Water Resource Institute, Nigeria

 <p>Dr OO Yaya RC-IRBM, National Water Resources Institute, Kaduna, Nigeria</p>	<h3>The Centre – Establishment</h3> <p>Dr OO Yaya: Brief on RC-IRBM</p> <ul style="list-style-type: none"> On 10th Nov, 2011, The 36th UNESCO General Conference formally approved the establishment of the Regional Centre for Integrated River Basin Management (RC-IRBM) in Nigeria as a Category II Centre under the auspices of UNESCO On 12th March, 2012, the Agreement between the Federal Government of Nigeria and UNESCO for the establishment and operation of the RC-IRBM was signed On 17th September, 2013, the Hon. Minister of Water Resources inaugurated the 7-man Governing Board of the Centre On 27th November, 2013, the Governing Board of the Centre appointed an interim Director and Secretariat of the Centre 
<h3>The Centre – Name, Location and Structure</h3> <p>Dr OO Yaya: Brief on RC-IRBM</p> <p>Name: Regional Centre for Integrated River Basin Management (RC-IRBM)</p>  <p>Host Institution: National Water Resources Institute, Kaduna, Nigeria (NWRI)</p>	<h3>The Centre – Vision, Mission and Objectives</h3> <p>Dr OO Yaya: Brief on RC-IRBM</p> <p>Vision: To be one of the foremost institutions for capacity building having responsibility for training and research activities, acquisition, archiving and analysis of data and dissemination of information for sustainable IRBM</p> <p>Mission: Promotion of effective and efficient IRBM of the Member States in the sub-region for sustainable water resources development, in collaboration with other UNESCO Water Centres</p> <p>Objectives:</p> <ol style="list-style-type: none"> Constitute a facilitator and synergistic structure providing the articulation of the different scientific and institutional stakeholders at local, national, regional and international levels, for the implementation of the IRBM particularly by facilitating interactions among and provide support to River Basin Development Authorities or Organizations in the West African region; Conduct and promote hydro-informatics, integrated water resources management and socio-economic research; and Provide IRBM training and tertiary education facility for water professionals and practitioners in the West African region.
<h3>The Centre – Core Functions and Key Activities</h3> <p>Dr OO Yaya: Brief on RC-IRBM</p> <p>Functions:</p> <ul style="list-style-type: none"> Coordinate the implementation of co-operative research projects and studies with regional, federal and local authorities, as well as private sectors; Build and run networking for information sharing, knowledge exchange and capacity-building in Member States of the West African region; Organize training courses, seminars, workshops and meetings; and Produce publications and disseminate information. <p>Key Activities:</p> <ol style="list-style-type: none"> IWRM Research and Training; Hydro-Informatics and Related Services; Institutional Framework Development; and Regional Cooperation and Partnership 	<h3>Some Activities of the Centre</h3> <p>Dr OO Yaya: Brief on RC-IRBM</p> <p>NWRI, as the host institution of RC-IRBM, has carried some activities for proper take-off of the Regional Centre:</p> <ol style="list-style-type: none"> To promote partnership and cooperation between the RC-IRBM and other UNESCO Water Centres and also to share their experience on the operations of UNESCO Category II Water Centre, NWRI has carried out peer visits to 3 Centres in 2011: <ol style="list-style-type: none"> UNESCO-IHE, Delft, The Netherlands (12th – 13th Nov., 2011), International Research and Training Centre for Erosion and Sedimentation, Beijing, China (20th – 24th Nov., 2011), and International Centre for Education, Capacity Building and Applied Research in Water Fruit, State of Minas Gerais – CEP (MG), Brazil (11th – 15th Dec., 2011).

APPENDIX 10

Presentation on “Asia Pacific Centre for Ecohydrology (APCE)”

by

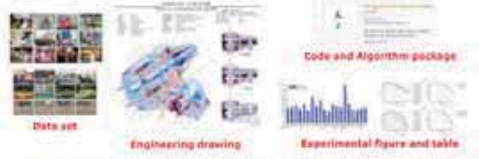

Mr. Hery Harjono, Category 2 Centre of UNESCO / Indonesian Institute of Sciences (LIPI), Indonesia

 <p>ASIA PACIFIC CENTRE FOR ECOHYDROLOGY (APCE)</p> <p>Hery Harjono Asia Pacific Centre for Ecohydrology (APCE) - Category II Centre of UNESCO/Indonesian Institute of Sciences (LIPI)</p> 	<p>ASIA PACIFIC CENTRE FOR ECOHYDROLOGY APCE – UNESCO CATEGORY II CENTRE</p> <ul style="list-style-type: none"> It focuses on ecological approaches to water resources management, to provide sustainable water for the people by harnessing science and technology, education and culture. APCE is committed to contributing towards overcoming current and important issues of national, regional and global interest, such as poverty, disaster risk reduction and climate change mitigation & adaptation .
<p>Governing Board</p>  <p>Prof. Iskandar Zulkarnain, Indonesia</p> <p>Prof. Soontak Lee, Korea</p> <p>Prof. Kaoru Takara, Japan</p> <p>Prof. Shahbaz Khan, UNESCO</p> <p>Prof. Quentin Grafton, Australia</p> <p>Prof. Hidayat Pawitan, Indonesia</p>	<p>Organization Structure</p> 
 <p>Strategic Plan of APCE “Managing Water Systems through Ecohydrology and Cultural Values”</p> <p>VISION: To be an internationally Reputed Asia Pacific Center in Urban and Rural Ecohydrology by 2021</p> <p>Mission: Develop understanding and practices of ecohydrology through research, training and knowledge exchanges, information systems and public awareness.</p> <p>APCE will develop excellent expertise in the following fields:</p> <ol style="list-style-type: none"> 1. Relationships among ecological pattern and hydrological process; 2. Disturbance and dynamics in natural and anthropogenic ecology and hydrology; 3. Ecohydrological approaches to biodiversity conservation, environmental management, and ecological restoration; 4. Integrating hydrology with ecological planning, design, and architecture, or reverse; 5. Transdisciplinary studies of regional sustainability from scopes of ecohydrology, ecology, culture (society) or integration of them. 	<p>STRATEGIC GOAL of APCE</p> <ol style="list-style-type: none"> 1. To promote local resources base ecohydrological research 2. To strengthen local capacity to adopt ecohydrological concept and approach 3. To provide easy access to local resources based ecohydrological information and knowledge 4. To enhance public awareness of local resources based ecohydrological practices

APPENDIX 11

Presentation on “International Knowledge Centre for Engineering Sciences and Technology (IKCEST)”

by
Dr. Liu Chang, China

 <p>International Knowledge Centre for Engineering Sciences and Technology (IKCEST) under the Auspices of UNESCO (Category II)</p> <p>LIU Chang KL, Malaysia May 2015</p>	<p>Motivation I: Engineering Achievements in China</p> <p>China has made many incredible achievements in the critical engineering fields during the latest decades.</p>  <p>Hangzhou Bay Bridge Three Gorges Dam Project High-Speed Railway Qinghai-Tibet Railway Lunar exploration</p>
<p>Motivation I: Engineering Achievements in China</p> <p>Those achievements produces a wealth of engineering experiences and knowledge, e.g., design documents, engineering drawings, experimental data.</p>  <p>Data set Engineering drawing Code and Algorithm package Experimental figure and table</p> <p>Those expertise and knowledge should be shared with other developing countries.</p>	<p>Motivation II: Strengthening Engineering at UNESCO</p> <p>Engineering is becoming one of the most important items on the development agenda of UNESCO.</p>  <p>Executive Board SC</p>
<p>Motivation III: Big Data Era</p> <p>Big data-Large pools of data that come from Internet, Internet of things (IOT), digital libraries, archives, museum and etc.</p> <p>“Big Data” challenges conventional IT technologies, and now is the hottest word in the industry and academia.</p> <p>Many UNESCO member states, especially the developing countries, currently are in urgent need of the abilities of processing and analyzing the available big data.</p>	<p>The Proposer of IKCEST: CAE</p> <p>The Chinese Academy of Engineering is a national organization composed of elected members with the highest honor in the engineering science and technology community in China. CAE is the highest honorary, advisory academic institution in engineering science and technology in China.</p>  <ul style="list-style-type: none"> CAE was founded in 1994 in Beijing. CAE initiates and conducts strategic study and provides consultancy for decision-making for the nation's key issues of engineering science and technology.

Presentation on “Isfahan Regional Centre for Technology Incubators and Science Parks Development (IRIS)”

by

Dr. Hasan Khakbaz, Advisor of President of ISTT, Iran

Isfahan Regional Center for Technology Incubators and Science Parks Development (IRIS)
 (under the auspices of UNESCO)
 29th May 2013

Presented by: **Hasan Khakbaz**
 Advisor to President of ISTT

ISTT Introduction

Affiliation by:

- The Ministry of Science, Research & Technology (MSRT)

Support by:

- Isfahan Provincial Government
- Industries
- Universities
- Research Centers

Location:

- On 520 ha of land adjacent to Isfahan University of Technology

www.istt-ir.com Hasan Khakbaz

ISTT Objectives

- ✓ Industrial renovation and competitiveness
- ✓ Bridging the technological divide
- ✓ Encouraging entrepreneurial and scientific thinking
- ✓ National empowerment
- ✓ Job creation for young scientists

ISTT General Services & Facilities

- ✓ Laboratories
- ✓ Library
- ✓ Technical and business consultation
- ✓ Mentoring
- ✓ Networking
- ✓ Marketing
- ✓ Technology Transfer Office (TTO)
- ✓ Financial (loans and grants)
- ✓ International services
- ✓ Seminars and conferences
- ✓ General support services
- ✓ Technical and professional support services

APPENDIX 13

Presentation on “UNESCO Category 2 Regional Centre on Groundwater Resources, Education, Training and Research Institute in Kenya”

by

Mr. Wilson M. Lekoomet, Kenya Water Institute (KEWI), Kenya

<p style="text-align: center;">UNESCO CATEGORY II REGIONAL CENTRE ON GROUNDWATER RESOURCES, EDUCATION, TRAINING AND RESEARCH INSTITUTE IN KENYA</p> <p style="text-align: center;">PRESENTATION FOR WORKSHOP HELD IN KUALA LUMPUR, MALAYSIA BETWEEN THE 26TH AND 27TH MAY, 2015</p> <p>By: Wilson M. Lekoomet Senior lecturer Kenya Water Institute</p>	<p>Introduction</p> <ul style="list-style-type: none"> In March, 2013 the Government of Kenya (GOK) and UNESCO officially signed an agreement to create a UNESCO Category II regional centre on groundwater resources, education, training and research. The centre hosted in KEWI will act as a regional platform for education, research and training on groundwater resources. The centre will be conducting research, offering professional training, providing advice, facilitating technological transfer and promoting regional cooperation and exchange experience.
<p>Introduction Cont.</p> <ul style="list-style-type: none"> Some key objectives of the centre include the conduct of research, offering professional training, providing policy advice, facilitating technological transfer and promoting regional collaboration and exchange of experience. The specific agreement was signed in March, 2013, however there has been a delay in the operationalisation of the centre activities due to some reforms in the state corporations in Kenya. In March 2013 the Kenya government initiated a reform process which is meant to streamline all state corporations. This process involves streamlining, and merging of state corporations with a view of improving their efficiencies. The state corporation advisory committee (SCAC) has concluded the process and it is anticipated that in due course the centre will be operationalized. The ministry of Environment, Water and Natural Resources is expediting the signing up of the legal documents so as to ensure that the centre is operationalized ASAP. 	<p>Centre's of activities</p> <ul style="list-style-type: none"> In the meanwhile, although the centre has not been operationalized Kenya Water Institute (KEWI) has been undertaking a number of activities on behalf of the centre. Some of these activities are: Training in groundwater for both the regular students and other clients (short courses) for different clients in Kenya and the region. Consultancy services to different clients in Kenya. Hydro geological surveys for the different clients in Kenya and the region. Capacity building of water experts i.e. Currently a number of KEWI staff are pursuing degree programmes in different Universities in Kenya. This is aimed at improving water ground water Management capacity within the institution and the country. So far Seven (7) staff are undertaking undergraduate, seven are undertaking their MSc, while three (3) are undertaking their PhDs.
<p>Centre's of activities cont.</p> <ul style="list-style-type: none"> KEWI was a major partner and contributed in the sponsoring of the National Water Summit held in October, 2014 in Turkana and presented a paper on “Research and capacity building in the water sector” in Kenya. KEWI has identified an office for the centre, where the coordination of the center's activities will be done. In the meanwhile, as we await the commencement of the center's operations a senior officer has been identified to coordinate the center's activities. KEWI played a major role in cultural celebrations held at KICC, Nairobi organized by KNATCOM in November, 2014. KEWI participated in the Kenya National Commission for UNESCO collaboration marking the 50 years of Kenya and UNESCO collaboration held between 24th November, 2014 and 28th November, 2014 held in Paris. 	<ul style="list-style-type: none"> The construction of a water resource centre, which will act as a hub for water Resources Research and training is ongoing. The resource center is going to host the offices of the UNESCO Category II center. In January, 2015 ten (10) KEWI staff members undertook a tailor made training in groundwater in Naivasha funded by the Netherlands Fellow ship programme (Niche – Nuffic programme). In collaboration with other partners (JKUAT and living Water African Region), KEWI is in the process of establishing a joint five year project whose purpose is to develop capacity for the drilling technology experts. Under this project about twelve experts will be trained at phd level, twenty at master level and about 150 at advanced diploma level.

<p>Areas of Collaboration</p> <p>In the recent past UNESCO undertook a Ground Water mapping project in Turkana which culminated in the discovery of large ground water reservoirs. The KEWI and the category II centre will play a major role in furthering this course and will serve as a hub for capacity development in water related matters in the East Africa Region.</p> <ul style="list-style-type: none"> • Currently KEWI is collaborating with a number of institutions in the sector within Kenya and outside Kenya. <p>Potential areas of Collaboration are;</p> <ul style="list-style-type: none"> • Ground water capacity development. • Mapping of ground water resources in the region • Groundwater Governance (Policy, legislative framework, Institutional capacity and Regulations). • Flood control and drought mitigation. Nairobi is prone to flooding especially the area near the Kenya Water Institute. 	<p>Potential areas of Collaboration continued</p> <ul style="list-style-type: none"> • Trans boundary ground water management. • Water Security • Integrated Water Resources Management • Non Revenue Water management • Alternative water sources i.e. rainwater harvesting. • Developing a sustainable and reliable water information system. • Rain water harvesting for irrigation. <p>KEWI is looking forward to initiate more collaboration with other institutions within the UNESCO Family and others.</p>

APPENDIX 14

Presentation on “HTCKL Work Related to Science and UNESCO”
by
Dr. Mohamed Roseli Zainal Abidin, Humid Tropics Centre Kuala Lumpur (HTCKL),
Department of Irrigation and Drainage Malaysia

MISSION & OBJECTIVES

The Regional Humid Tropics Hydrology and Water Resources Centre for South-East Asia and the Pacific

Under the auspices of the United Nations Education, Scientific and Cultural Organization-International Hydrological Programme (UNESCO-IHP) since 28 October 1999

Mission

A catalyst in carrying out regional and international collaboration, formalization and partnering among countries in the region where water related problems are in need for urgent attention and a demonstrable solution.

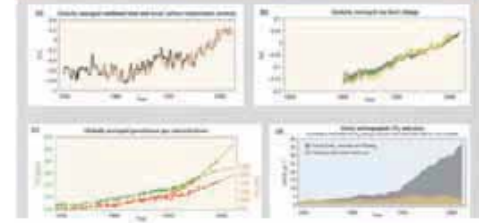

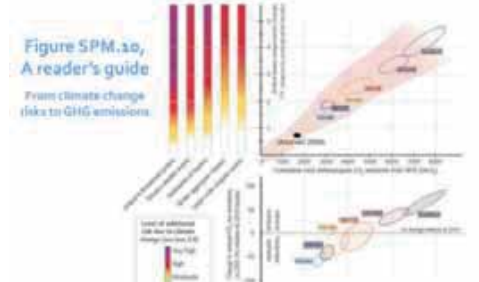

Objectives

- To promote a conducive atmosphere for collaboration through technology and information exchange, education and sciences.
- To increase scientific, technological knowledge about the hydrological cycle thus increasing the capacity to better manage and develop the water resources in a holistic manner, and
- To promote and increase scientific and technological knowledge about urban stormwater management, ecohydrology, humid tropics and water education.

APPENDIX 15

Presentation on “IPCC Fifth Assessment Report, Lima Climate Action High Level Session Lima Peru”

by
Dr. Rajendra K. Pachauri, India

 <p>IPCC Fifth Assessment Report</p> <p>Lima Climate Action High Level Session Lima, Peru</p> <p>ipcc</p>	<h3>Key Messages</h3> <ul style="list-style-type: none"> → Human influence on the climate system is clear → The more we disrupt our climate, the more we risk severe, pervasive and irreversible impacts → We have the means to limit climate change and build a more prosperous, sustainable future <p>ipcc</p>
<p>It is extremely likely that human influence has been the dominant cause of warming since the mid-20th century.</p>  <p>ipcc</p>	<h3>Climate change will amplify existing risks and create new risks for natural and human systems</h3>  <p>Continued warming increases the risks of severe, pervasive, and irreversible impacts.</p> <p>Risks are unevenly distributed and are generally greater for disadvantaged people and communities in countries at all levels of development.</p> <p>People who are socially, economically, culturally, politically, institutionally or otherwise marginalized are especially vulnerable to climate change.</p> <p>ipcc</p>
<p>(A) Risks from climate change... (B) ...depend on cumulative CO₂ emissions...</p> <p>Figure SPM.10, A reader's guide</p> <p>From climate change risks to GHG emissions</p>  <p>(C) ...which in turn depend on annual emissions over the next decades</p> <p>ipcc</p>	 <p>“Coastal adaptation and migration requires well aligned policies and measures across multiple scales: international, regional, national and sub-national. Policies across all scales supporting the knowledge development, risk-reduction and transfer, as well as financing for responses to climate change, can improve and advance the effectiveness of policies that directly promote adaptation and migration.”</p> <p>ipcc</p>

APPENDIX 16

Presentation on “Environmental Management and Infrastructure Development Engineering, Saitama University Japan”

by
Prof. Dr. Matsumoto Yasunao, Japan

<p>Introduction of UNESCO Chair on Environmental Management and Infrastructure Development Engineering, Saitama University, Japan</p> 	<p>Location of Saitama University</p> 																																			
<p>UNESCO Chair at Saitama U.</p> <ul style="list-style-type: none"> On Environmental Management and Infrastructure Development Engineering Established in 1997 Objectives: <ul style="list-style-type: none"> To promote collaboration between the researchers and the research team of the university and other universities and institutions To attract prospective students to our existing International Graduate Program on Civil and Environmental Engineering To share experiences and knowledge in environmental management and infrastructure development engineering through research and education 	<p>International Graduate Program on Civil and Environmental Engineering</p> <ul style="list-style-type: none"> The program started in 1992 All education is given in English Students enrol for <ul style="list-style-type: none"> Master's & Doctoral Programs Scholarships (Travel cost, Tuition fee, Living expenses) <ul style="list-style-type: none"> Ministry of Education, Culture, Sports, Science and Technology (MEXT) – 7 per annum Asian Development Bank (ADB-JSP) – 11 per annum World Bank (J/WBGSP) – 4+ per annum Others Total enrolment (till April 2015): <ul style="list-style-type: none"> Approximately 500 students from 26 countries

“Presentation on behalf of Professor Dr. M.S. Swaminathan, Hony. UNESCO Jaques Cousteau Chair for Ecotechnology for Sustainable Rural Development”

by

Dr. P.C. Kesavan, M.S. Swaminathan Research Foundation, India

<p style="text-align: center;">Presentation on behalf of Professor Dr. M.S. Swaminathan FRS, Hony. UNESCO Jaques Cousteau Chair for Ecotechnology for Sustainable Rural Development 26 - 27 May 2015, Kuala Lumpur</p> <p style="text-align: center;">P.C. KESAVAN</p> <p style="text-align: center;">M.S. SWAMINATHAN RESEARCH FOUNDATION</p>	<p style="text-align: center;">Green Revolution and the Paradox of Grain Mountains and Hungry Millions</p> <ul style="list-style-type: none"> • ‘GR’ provided food security at the national level (i.e. enhanced food Availability), but not at the household level of millions of resource-poor marginal and small farming, fishing and landless rural families. • ‘GR’ did not create more on-farm and off-farm livelihoods. • ‘GR’ not integrated with sustainable rural development (i.e. safe drinking water, sanitation etc). So, Absorption/Utilisation was also not addressed. • ‘GR’ largely monocropping ; loss of agrobiodiversity
<p style="text-align: center;">Indian Scenario: Paradigm of “Mountains of grains on the one hand and Millions of hungry people” on the other</p> <ul style="list-style-type: none"> ➤ Pillars of household / Individual level Food security: 1. Availability 2. Access 3. Absorption ➤ Livelihood security — Food security ➤ Clean drinking water especially in the rural areas <p style="text-align: center;"><small>(Swaminathan 2001, Gen.66:81, 948-954; 2003 NRES J pp.7.1-7.14)</small></p>	<p style="text-align: center;">Achieving Productivity in Perpetuity for Food and Nutrition Security: Evolutionary Perspectives (Based on numerous research papers and books of Professor M.S. Swaminathan)</p> <ul style="list-style-type: none"> • Green Revolution: Broke the inertia in the yield increment of cereal grains ; Not sustainable; as predicted, it degenerated into a ‘Greed Revolution’ • Evergreen Revolution: Sustainable; achieving productivity in perpetuity without accompanying ecological and social harm. Suitable for small farms with resource-poor farmers. With appropriate farming systems, these can provide food and nutrition security, income to access food and agricultural remedies for nutritional maladies
<p style="text-align: center;">Transforming Green Revolution into Evergreen Revolution</p> <p style="text-align: center;"><small>(P.C. Kesavan and M.S. Swaminathan, 2007, ASM J. 1, 362-368)</small></p>	<p style="text-align: center;">Components of Evergreen Revolution</p> <p style="text-align: center;"><small>(P.C. Kesavan and M.S. Swaminathan, 2007 ASM J. 1, 361 – 368)</small></p>

Appendix 19

Presentation on “UNESCO Chair in Water Resources - Sudan” by

Assoc. Prof. Dr. Sameh Kantoush, Disaster Prevention Research Institute, Kyoto University

 <p>UNESCO CHAIR IN WATER RESOURCES - SUDAN</p> <p>Regional Workshop: Promoting Interaction and Knowledge Exchange between UNESCO Natural Sciences related Centres and Chairs in Asia and the Pacific</p> <p>26-27 May 2018, Istana Hotel, Kuala Lumpur, Malaysia</p> <p>Presented by Assoc. Prof. Sameh Kantoush Disaster Prevention Research Institute, Kyoto University E-mail: kantoush.sameh@med.kyoto-u.ac.jp UNESCO Chair in Water Resources -Sudan (UNESCO-CWR)</p>	<h3>Background and Objectives of UNESCO-CWR</h3> <ul style="list-style-type: none"> UNESCO Chair in Water Resources-Sudan (UNESCO-CWR) was established in 1994 following the agreement signed by the UNESCO Director General and the Vice Chancellor of the Omdurman Islamic University on behalf of the Sudan Government. UNESCO-CWR serves the local, regional "the Nile Basin, Eastern and Central Africa, and Shared Aquifers" AWA international water community. UNESCO-CWR mission is "to build, enhance and strengthen capacity for sustainable water resources development and management through education, research, consultancy, and knowledge dissemination." Facilitate coordination- collaboration- cooperation among universities, research institutions & centers at national, regional and international levels. Promote integrated research systems and multi-interdisciplinary approach Capacity building in water management and related fields. Documentation, dissemination and awareness. <p>UNESCO Chair in Water Resources -Sudan (UNESCO-CWR)</p>
<h3>UNESCO – CWR Core Activities</h3> 	 <p>UNESCO – CWR</p>
<h3>Flash Flood Hazard and Water Harvesting</h3> 	<h3>Educational Activity</h3> <p>To fulfill its Educational duties the UCWR is regularly running the following programs:</p> <ul style="list-style-type: none"> MSc Programs <ul style="list-style-type: none"> MSc program in Hydrology MSc program in Water resources Development and Management MSc program in Environmental Engineering Postgraduate Diploma program in Water resources Development and Management Training and Capacity Building Short Courses <p>UNESCO Chair in Water Resources -Sudan (UNESCO-CWR)</p>

APPENDIX 20

**Presentation on “Ulugbek UNESCO Chair on Physics and Astronomy”
by
Prof. Dr. B. Fayzullaev, Department of Physics, National University of Uzbekistan**

<p style="text-align: center;">Ulugbek UNESCO Chair on Physics and Astronomy In National University of Uzbekistan, Tashkent, Uzbekistan</p> <p style="text-align: center;">(Prof. B. Fayzullaev Dept. of Physics, National University of Uzbekistan)</p>	<p style="text-align: center;">Ulugbek UNESCO Chair</p> <ul style="list-style-type: none">• The Ulugbek UNESCO Chair on Physics and Astronomy was established at the National University of Uzbekistan (NUUZ), Tashkent, in 1998.* Promotion of an integrated system of research, training, information and documentation activities in the field of Physics and Astronomy; Development of the integration into postgraduate study program of new information and communication technologies; Publication of new curricula materials in this field; Organization of scientific conferences and round-tables.
<p style="text-align: center;">Academic activities</p> <p>■ Education</p> <ul style="list-style-type: none">• Courses on:<ul style="list-style-type: none">• 1. Quantum Chromo-dynamics, 40 h., each year,• 2. Gauge Quantum Fields, 40 h., each year,• 3. Quantum Statistics, 40 h., each year,• 4. Theory of Gravity, 40 h., each year,• 5. Mathematica 9.0 40 h., each year,• 6. TeX&Latex, 40 h., each year,• 7. Networking and Internet, 40 h., each year.• Target groups: graduate students (10-14 each year)	<p style="text-align: center;">Academic activities</p> <p>■ Textbooks:</p> <ul style="list-style-type: none">• -The course of theoretical physics in 4 volumes in Uzbek on:<ul style="list-style-type: none">• 1. Theoretical Mechanics;• 2. Electrodynamics;• 3. Quantum Mechanics;• 4. Statistical Physics and Thermodynamics
<p style="text-align: center;">Academic activities</p> <ul style="list-style-type: none">• Most outstanding students were ensured by recommendations to continue their education in German, Japanese and Korean Universities. Some of them has got their PhD degree already.	<p style="text-align: center;">UNESCO Chair and Dept. of Physics</p> <ul style="list-style-type: none">• The Ulugbek UNESCO Chair is acting in close cooperation with the Nuclear and Theoretical Physics Chair of Department of Physics, the Uzbekistan National University, Tashkent. Many courses are delivered jointly for common students. Invited by UNESCO Chair from abroad speakers giving talks at common seminar.

LIST OF ACRONYMS

UNESCO	United Nations Education, Scientific and Cultural Organization
ISTIC	International Science, Technology and Innovation Centre of South-South Cooperation Under The Auspices of UNESCO
MOE	Ministry of Education Malaysia
UTM	Universiti Teknologi Malaysia
SDG	Sustainable Development Goals
HIST	International Centre on Space Technology for Natural and Cultural Heritage under the auspices of UNESCO
ICQHS	International Centre on Qanat and Historic Hydraulic Structures
RC-IRBM	Regional Centre for Integrated River Basin Management
APCE	Asia Pacific Centre for Ecohydrology
LIPI	Indonesian Institute of Sciences
IKCEST	International Knowledge Centre for Engineering Sciences and Technology
IRIS	Isfahan Regional Centre for Technology Incubators and Science Parks Development
KEWI	Kenya Water Institute
HTCKL	Humid Tropics Centre Kuala Lumpur
IPCC	Intergovernmental Panel on Climate Change
