Conference of Parties to the International Convention against Doping in Sport

5CP

Fifth Session
Paris, UNESCO Headquarters, Room IV
29-30 October 2015

ICDS/5CP/INF.1 REV.
22 July 2015

Item **8.1** of the agenda

Reports of States Parties on measures taken by them for the purpose of complying with the International Convention against Doping in Sport

SUMMARY

Background:

It is a requirement under Article 31 of the International Convention against Doping in Sport (hereinafter referred to as "the Convention") that all States Parties "shall forward every two years to the Conference of Parties through the Secretariat, in one of the official languages of UNESCO, all relevant information concerning measures taken by them for the purpose of complying with the provisions of this Convention." The Secretariat has developed the Anti-Doping Logic system, which consists of an online questionnaire and analysis software, to collect data from all States Parties on the measures they have taken to implement the Convention. This information document presents the results generated by the Anti-Doping Logic system - with detailed data analysis initiated by the Secretariat - based on the information provided by States Parties for the 2014-2015 biennium. National reports of States Parties are available for consultation in ADLogic.

Table of Contents

List of Figures and Tables

Introduction

1. This report analyses the results of the questionnaire sent to all States Parties under the terms of Article 31 of the Convention for the Conference of Parties to the International Convention against Doping in Sport at UNESCO's headquarters on 29 and 30 October 2015.

2. The questionnaire, which is identical to the one presented to States Parties in 2013 – has 28 questions – and 23 sub-questions – that reflect the themes of the Convention, notably national anti-doping activities, international cooperation, education and training, and research.

3. This report focuses on the main areas of the Convention addressed in the questionnaire, namely:
    - Overall compliance
    - National Activities to Strengthen Anti-doping
    - International Cooperation
    - Education and Training
    - Research.

4. Particular attention is paid to Article 9 on measures against athlete support personnel and to Article 24.a on the promotion of research on anti-doping issues. A separate document has been prepared with regards to Articles 8 and 10 on prohibited substances and methods and nutritional supplements.[1]

5. The analysis takes into consideration the 116 States Parties which submitted completed reports using ADLogic.[2] The list of States Parties and their regional groupings included in the analysis are listed in Annex 1.

Overall Convention compliance

6. Full compliance with the Convention is measured using a system of benchmarks developed by UNESCO for each question of the ADLogic monitoring system. The benchmarks specify a minimum standard or threshold that States Parties are expected to meet in order to achieve compliance with the relevant question and article of the Convention. The level of the benchmark is set so that the standard is challenging but achievable, so as to maintain motivation and interest among States Parties beginning to engage in fundamental anti-doping activities. Based on the benchmark system, ADLogic creates for each State Party an overall gauge of compliance to the Convention. This is calculated by compiling the States Parties' level of compliance for each question relative to the question's benchmark. For example, if the country has not reached the minimum

[1] The selection of the articles was made by the UNESCO Secretariat.

[2] Number of countries to have completed the ADLogic questionnaire by 31 May 2015, hereafter identified as "States Parties".

benchmark standard, it is considered not compliant or partly compliant depending on its distance to the benchmark. Full compliance with the Convention is considered achieved when States Parties reach an overall 67% (two-thirds) full compliance under ADLogic. The maximum score is 100% full compliance.

7. At the global level, the level of compliance with the Convention remains fairly high among the 116 States Parties. In 2015, nearly half of all States Parties (55 total) were fully compliant with the Convention, having achieved at least two-thirds (67%) overall full compliance under ADLogic.[3] Twenty States Parties have achieved more than 85% full compliance with the Convention. Four countries have achieved nearly total compliance – Australia, Cuba, Romania and Serbia – at 96.4%, but unlike 2013, no countries reached 100% compliance.[4]

8. Compared to 2013, the number of States Parties complying at the two-thirds level decreased by only 5 in 2015. The overall rate of full compliance[5] is lower at 47% in 2015, compared to 58% in 2013.

9. The geographical distribution of 55 States Parties which are considered fully compliant with the Convention is shown in
10. Figure 1 (see Annex 1 for list of countries within regional groups). The region with the highest number of at least two-thirds fully compliant countries is Group I (17 countries), followed by Groups II (11), III (9) and IV (10). These four regions account for 85% of the world's at least two-thirds fully compliant countries.

11. In Groups I, II and IV, about half the countries have reached 67% full compliance with the Convention (Frame b of
12. Figure 1). Roughly 25% of countries have reached this level in Groups Va and Vb, and about 40% in Group III.

13. Twenty-one countries have not reached half full-compliance (less than 50%), compared to 38 countries in 2013. This group of States Parties is geographically diverse hailing from all regions, except Group II. Three States Parties – Guinea, Madagascar and Micronesia – are lagging the furthest behind, with less than 15% full compliance in 2015. Unlike 2013, all countries have some level of full compliance, however low.[6]

[3] In 2015, the median of full compliance across all monitoring questions stands at 64%, four percentage points lower than in 2013. One standard deviation above the mean (also 64) is 83%.

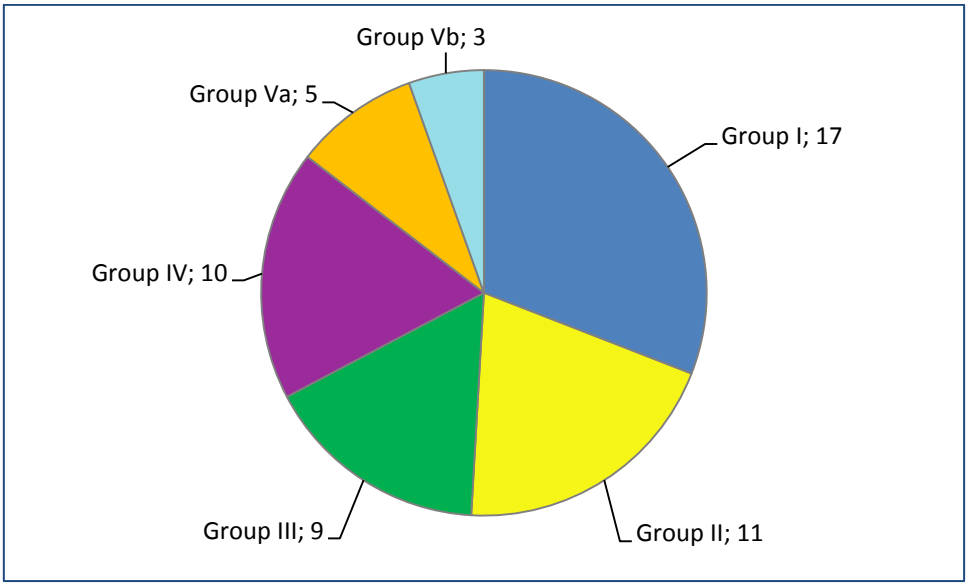
[4] In 2013, 3 countries had reached 100%: Austria, Bahrain and France.

[5] The rate of full compliance is calculated as the share of responding States Parties with full compliance at 67% as a share of all States parties responding to ADLogic, The difference in shares between years is not statistically significant.

[6] In 2013, 15 States Parties were fully non-compliant with the Convention (0%).

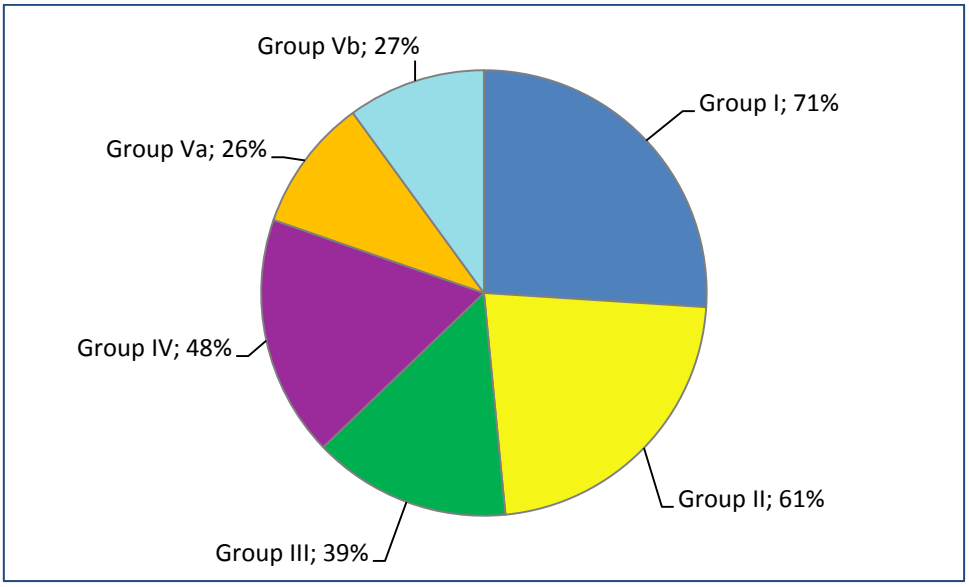
Figure 1: Geographical distribution of States Parties with 67% full compliance

a. Number of compliant States Parties



Reading note: Three States Parties in Group Vb are at least 67% in full compliance with the Convention.

b. Percentage compliance by group



Reading note: Twenty-seven percent of States Parties in Group Vb are at least 67% in full compliance with the Convention.

14. Monitoring the Convention has occurred since 2009[7] and embraced several Conferences of Parties (COP). The last two surveys of ADLogic (4COP in 2013 and 5COP in 2015)

[7] At its 2nd session, the Conference of Parties endorsed the electronic system to monitor the Convention and called upon all States Parties to complete the on-line questionnaire as set forth in the provisions of the Convention.

use identical questionnaires, which enables the direct comparison to monitor States Parties' progress. Table 1 summarizes the changes for those States Parties by region.

15. Since 2013, 63 States Parties increased their level of full compliance with the Convention, of which 23 increased by more than 25 percentage points. Although increases occurred in all Groups, Group Va registered the most increases during this period, with nearly 75% of all States Parties showing improvement. Groups I and II had lower increases at the regional level.

16. Some States Parties registered significantly large increases since 2013. Thirteen countries increased their full compliance by at least 50 percentage points.[8] Fifteen countries which had registered a null level of full compliance (0%) in 2013 increased their compliance ranging from 14% (Madagascar) to 89% (Uzbekistan) in 2015.

17. Between 2013 and 2015, 42 countries decreased their level of full compliance with the Convention. In 7 cases, States Parties lost more than 25 percentage points in their full compliance levels, 3 of which lost more than 40 percentage points (Argentina, France and Guinea).[9]

[8] Uzbekistan, Democratic People's Republic of Korea, Palau, Armenia, Myanmar, Turkmenistan, Equatorial Guinea, Rwanda, Montenegro, Mali, Burkina Faso, Kenya and Fiji (State Parties listed in decreasing order of size of increase).

[9] The other four countries are Slovakia, Italy, Jamaica and Bahrain (listed in increasing order of size of decrease). Guinea's case is particular as it fell from 50% fully compliant in 4CP, compared to 7% in 5CP. The other countries were at about 80% full compliance in 4CP.

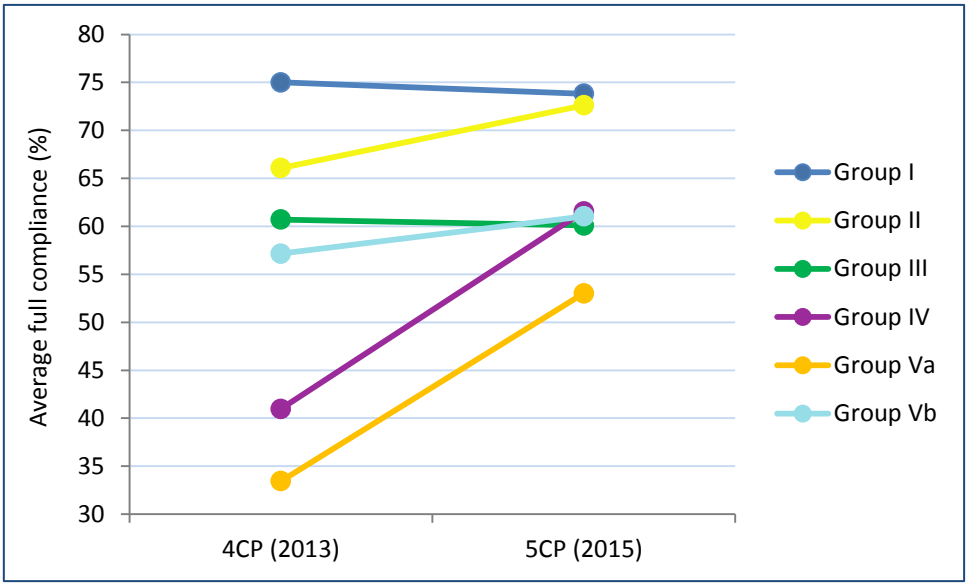
Table 1: Changes in full compliance of the Convention between 4CP and 5CP

Change between 4CP and 5CP								
	Increase		Increase by more than 25 % points	Decrease		Decrease by more than 25 % points	No change	
Group	Total	Share of group (%)	Name	Total	Share of group (%)	Name	Total	Share of group (%)
I	8	33	Israel	11	46	France, Italy	5	21
II	8	44	Armenia, Montenegro, Uzbekistan	8	44	Slovakia	2	11
III	14	61	Peru	8	35	Argentina, Jamaica	1	4
IV	12	57	Brunei Darusalamm, DPR Korea, Fiji, Myanmar, Palau, Turkmenistan, Vanuatu, Viet Nam	6	29		3	14
Va	14	74	Burkina Faso, Cameroon, Chad, Equatorial Guinea, Kenya, Mali, Rwanda,	5	26	Guinea	0	0
Vb	7	64	Kuwait, Saudi Arabia	4	36	Bahrain	0	0
Total	63	54	23	42	36	7	11	9

Note: DPR Korea: the Democratic People's Republic of Korea

18. Between 2013 and 2015, the average level of full compliance increased in most regions (Figure 2). The largest increases occurred in Groups IV and Va, where the regional average was about 20 percentage points higher in 2015 than 2013. Groups I and III registered little change during this period and remained relatively high at 74% and 60%, respectively. Group II's average increased to 73% to join Group 1 as the highest scoring regions in 2015.

Figure 2: Regional levels of full compliance in 2013 and 2015



Convention Part II. Anti-doping activities at the national level

Formalising anti-doping measures

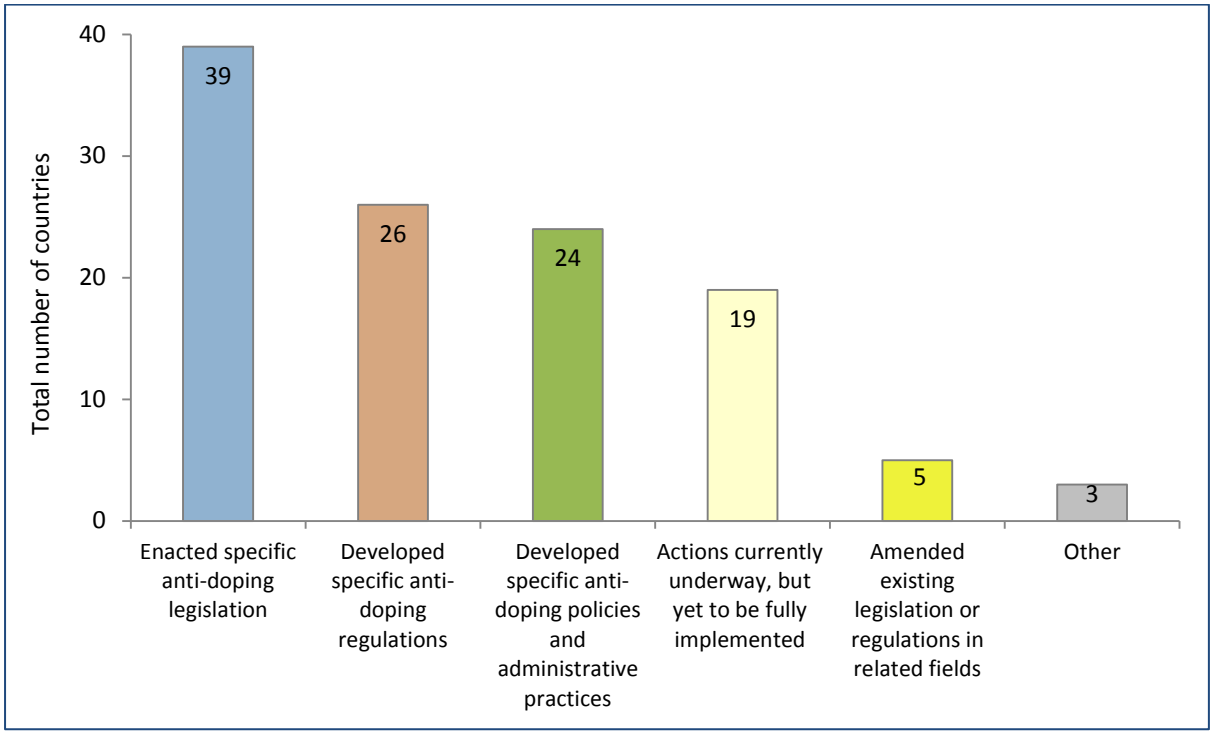
19. States Parties to the Convention are encouraged to adopt national anti-doping activities to "promote the prevention of and the fight against doping in sport, with a view to its elimination" (Article 1). The Convention enables governments to adapt some freedom to apply the Convention, using legislative, regulatory, political or administrative measures.

20. Figure 3 shows the combination of measures taken by States Parties.[10] About one-third of countries (39 totals) adapt some specific form of anti-doping legislation. Enacting regulations, policies and administrative practices with relation to anti-doping activities are also common practices in 26 countries.

21. Figure 4 presents the measures adopted by regional groups. The share of countries adopting specific anti-doping legislation is highest in Groups I and Vb (nearly half at 45%) and lowest in Group IV and Va where about one-quarter (25%) of countries have selected such measures. Developing specific anti-doping policies and administrative practices is most common in Group III (30% of States Parties), while specific anti-doping regulations was most prominent in Group II States Parties (nearly 40%). About 30% of States Parties in Group Va are still in the process of adopting anti-doping actions, although the nature of the measures to be implemented is not detailed.

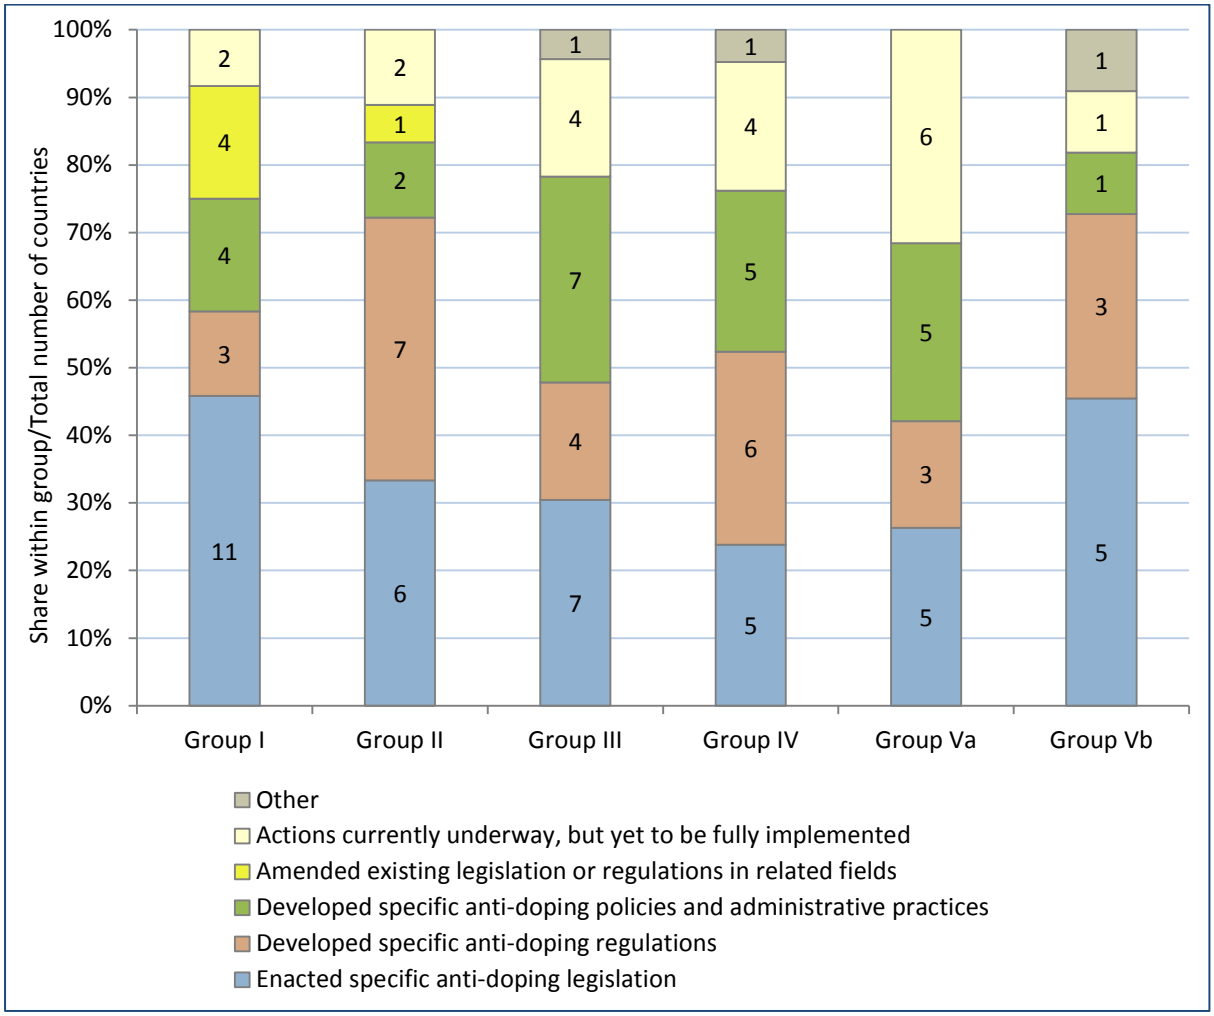
[10] A detailed analysis of anti-doping activities with relation to Articles 8 and 10 is available in a separate report (see document ICDS/5CP/Inf.2).

Figure 3: Specific anti-doping legislation enacted by majority of countries



Note: 116 States Parties replied to question Q1: "Describe the principal measure taken to abide by the obligations contained in the Convention." Only one answer is provided per State Party.

Figure 4: Anti-doping measures taken to support the Convention, by region



Reading note: 11 countries in Group 1 (46% of countries in the region) enacted specific anti-doping legislation.
Note: 116 States Parties replied to question Q1: "Describe the principal measure taken to abide by the obligations contained in the Convention." Only one answer is provided per State Party.

Article 9: Measures against Athlete Support Personnel since COP3

> **Article 9 – Measures against athlete support personnel**
>
> States Parties shall themselves take measures or encourage sports organizations and anti-doping organizations to adopt measures, including sanctions or penalties, aimed at athlete support personnel who commit an anti-doping rule violation or other offence connected with doping in sport.

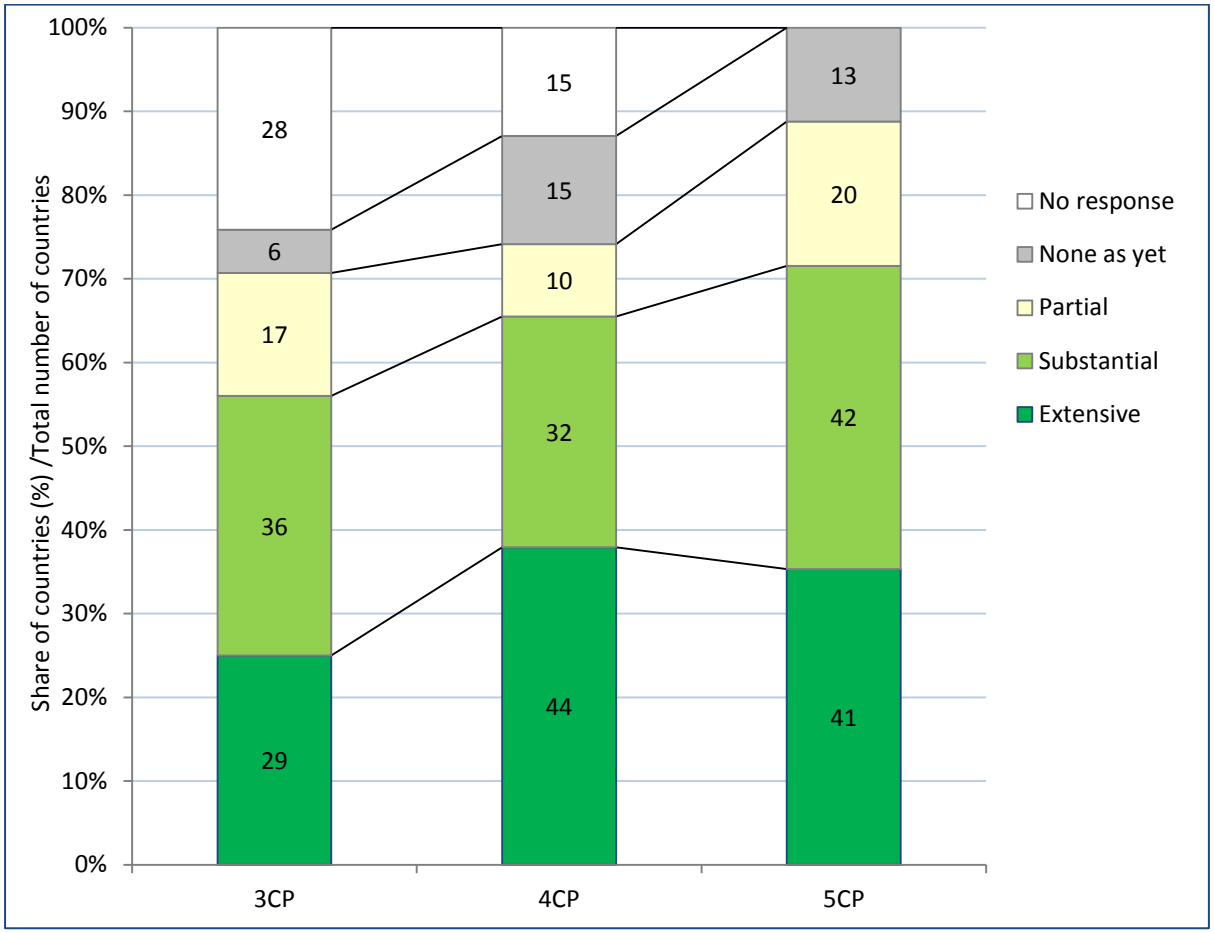
22. Since the third Conference of Parties, States Parties have addressed the concern over athlete support personnel, with a focus on how to take sanctions or penalties against their use of doping methods and substances in performance and training activities of athletes. ADLogic monitors the extent of these sanctions and penalties taken by States Parties.

23. States Parties have taken strong measures in putting the responsibility of anti-doping enforcement in the hands of athlete support personnel. In 2015, 41 (35%) of the 116 States Parties have taken extensive sanctions and penalties and another 42 (36%) have taken substantial measures against athlete support personnel who involved in doping in sport (Figure 5). About 17% of States Parties have taken only moderate or partial measures against athlete support personnel.

24. Figure 5 also shows the evolution of the level of measures taken against athlete support personnel involved with doping since the third Conference of Parties in 2011. Between 3COP and 5COP, for the same 116 counties, there has been a gradual increase in the adoption of extensive and substantial measures, albeit with a slight drop in the last phases since 4COP for extensive measures (3 fewer countries).

25. Taking partial measures here has been a constant growth of substantial and partial measures during the period. The change in the no response rate highlights the growth of States Parties participating in the monitoring mechanism ADLogic or new signatories to the Convention since 2011. However, the number of countries which have yet to enact any measures remains relatively high at nearly 13% of all States Parties.

Figure 5: Extent of measures taken against athlete support personnel, 2013-2015



Reading note: 29 countries in the 3CP or about 26 % of all countries in Group I conduct research on behavioural and social aspects of doping.
Note: CP is Conference of Parties. 5CP is in 2015, 4CP in 2013 and 3CP in 2011. The 116 States Parties of this report are included in this figure. They Question 5.1. "To what extent have measures been taken to allow athlete support personnel involved in doping in sport to be sanctioned or penalized?"

Convention Part III. International cooperation

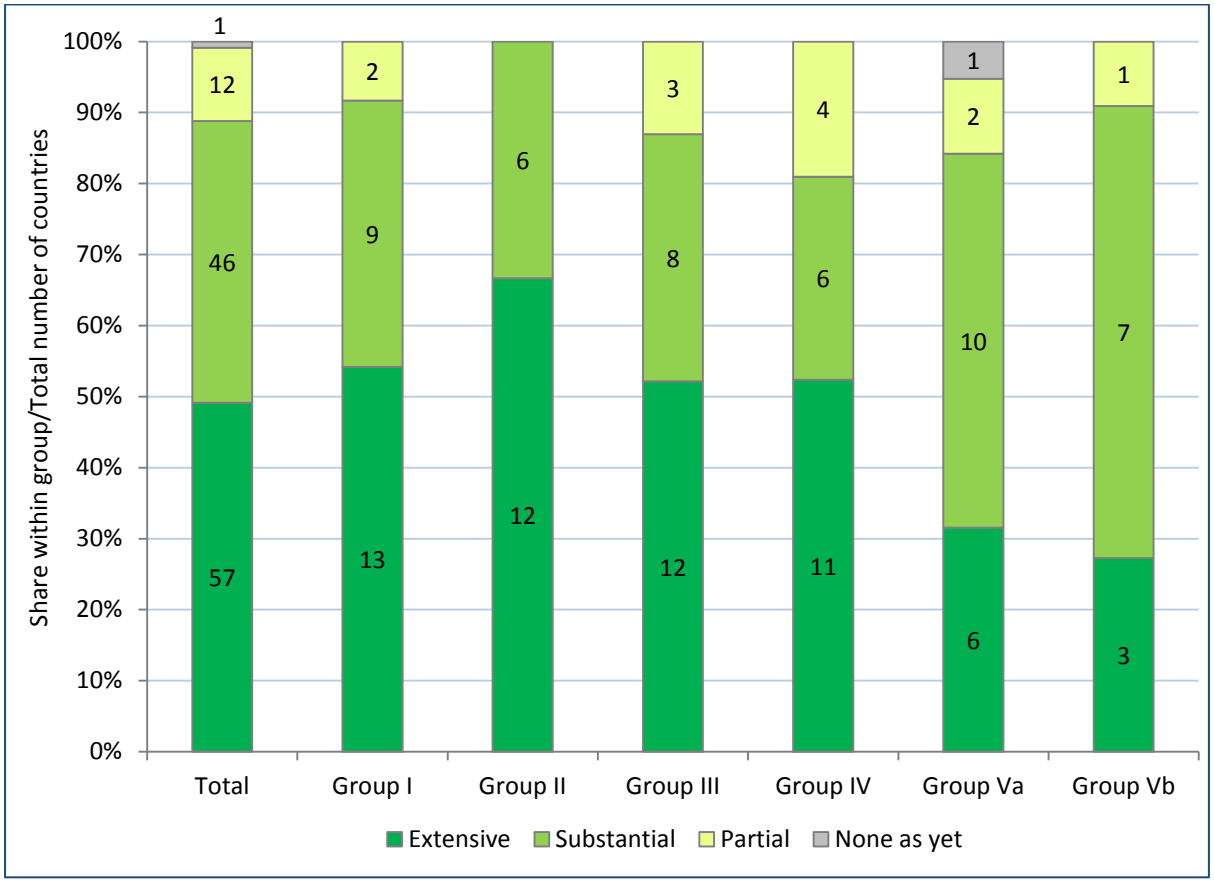
Cooperation among organisations

26. The Convention denotes specific measures to promote synergy among States Parties and encourage international cooperation among anti-doping organizations, public authorities and sporting organizations. This cooperation begins with coordination and support for the anti-doping activities of the World Anti-Doping Agency and national anti-doping organizations, so that anti-doping efforts among anti-doping organizations are carried out in accordance with the Code.

27. The level of international cooperation is measured by ADLogic based on "cooperation" between national public authorities, anti-doping and sports organisations and their international counterparts. While the definition of cooperation is not addressed specifically, nearly 90% of States Parties believe that substantial or extensive

cooperation exists with international counterparts (Figure 6).[11] International cooperation is quite high in nearly all regions, with Groups IV and Va performing a bit lower at around 80%. Extensive cooperation is much less common in Groups Va and VB, as only 30% of countries report this level.

Figure 6: Level of international cooperation, by region



Reading note: In 57 countries (49% of all countries), extensive cooperation exists between the levels.
Note: 116 countries responded to Question 13: "What level of cooperation exists between your public authorities, anti-doping and sports organizations and their international counterparts?"

Cooperation for anti-doping checks[12], results and sanctions

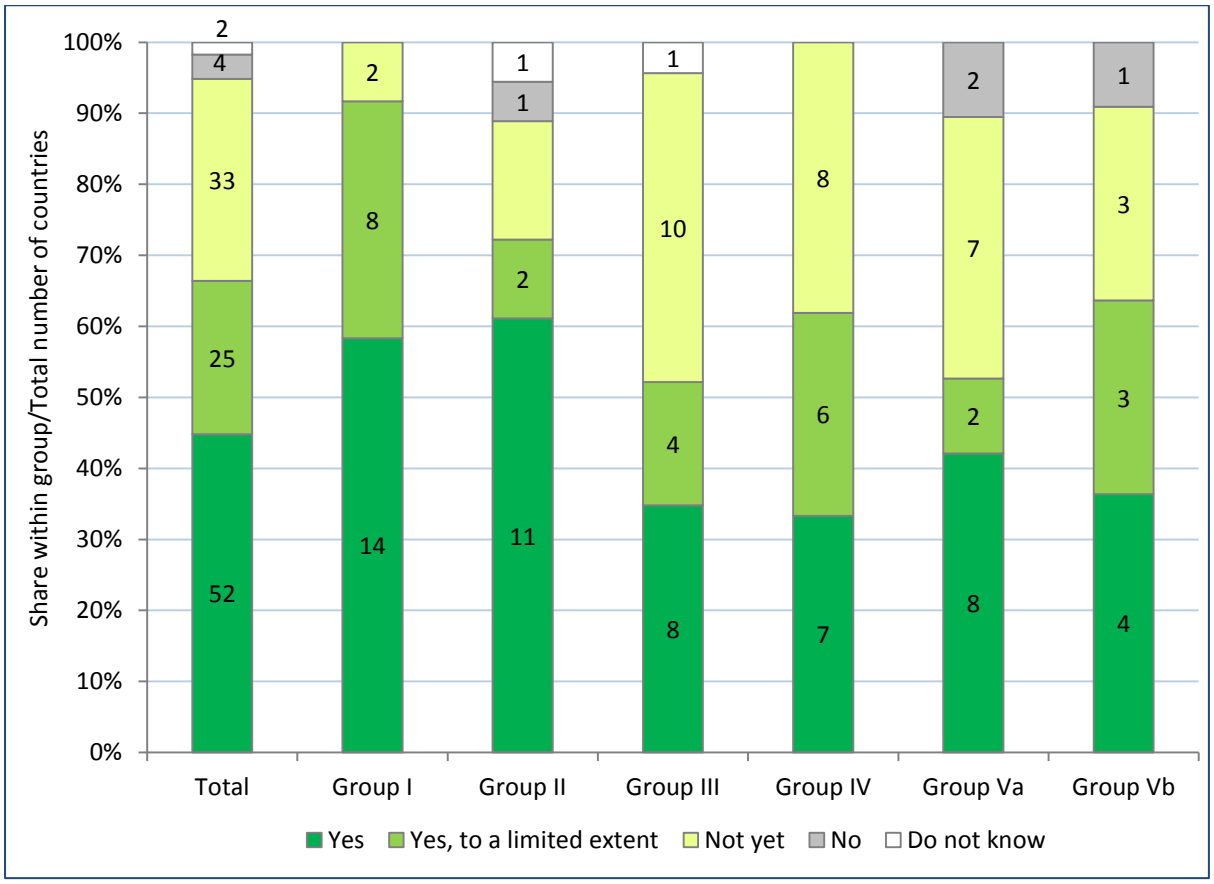
28. In terms of international cooperation, the ADLOGIC questionnaire also examines how States Parties carry out anti-doping work – namely reciprocal testing and enforcing sanctions – at a cooperative level.

29. Figure 7 shows the extent to which public authorities or anti-doping organisations in States Parties have entered into reciprocal testing agreements with their international counterparts. At a global level, about 45% (52 countries) of States Parties have developed these agreements, with an additional 22% (25 countries) having a limited form of agreement. When examining these same responses by region, Groups I and II stand

[11] Other questions address doping testing and controls as well as recognising test results and sanctions.
[12] "Checks" can include cooperation with WADA and other anti-doping organisations for doping controls and recognizing their doping control procedures (under ADLogic questions 13 to 18.1).

out as having a much larger level of cooperation, with around 60% of countries enabling reciprocal testing. Furthermore, in Group 1, an additional 8 countries have a limited reciprocal testing agreement, bring the overall share with some form of agreement to 92%. The other four groups – namely Groups III, IV, Va and Vb – are at similar levels of cooperation, ranging between about 30% and 40%.

Figure 7: International cooperation for reciprocal testing, by region



Reading note: 52 countries (45% of all countries) have entered into agreements regarding reciprocal testing.
Note: 116 countries responded to Question 17: "Have your public authorities or anti-doping organizations entered into any agreements with their international counterparts to allow reciprocal testing?"

30. Cooperation among States Parties appears more robust when it comes to recognizing the anti-doping test results and procedures of other anti-doping organizations that comply with the World Anti-Doping Code. Of the 116 States Parties, 114 have recognised the doping control procedures and test results of other anti-doping organizations if they are undertaken in a manner consistent with the World Anti-Doping Code. Nearly all of these countries (106 out of 114) follow through and enforce sanctions applied by other anti-doping organizations which are consistent with the World Anti-Doping Code.

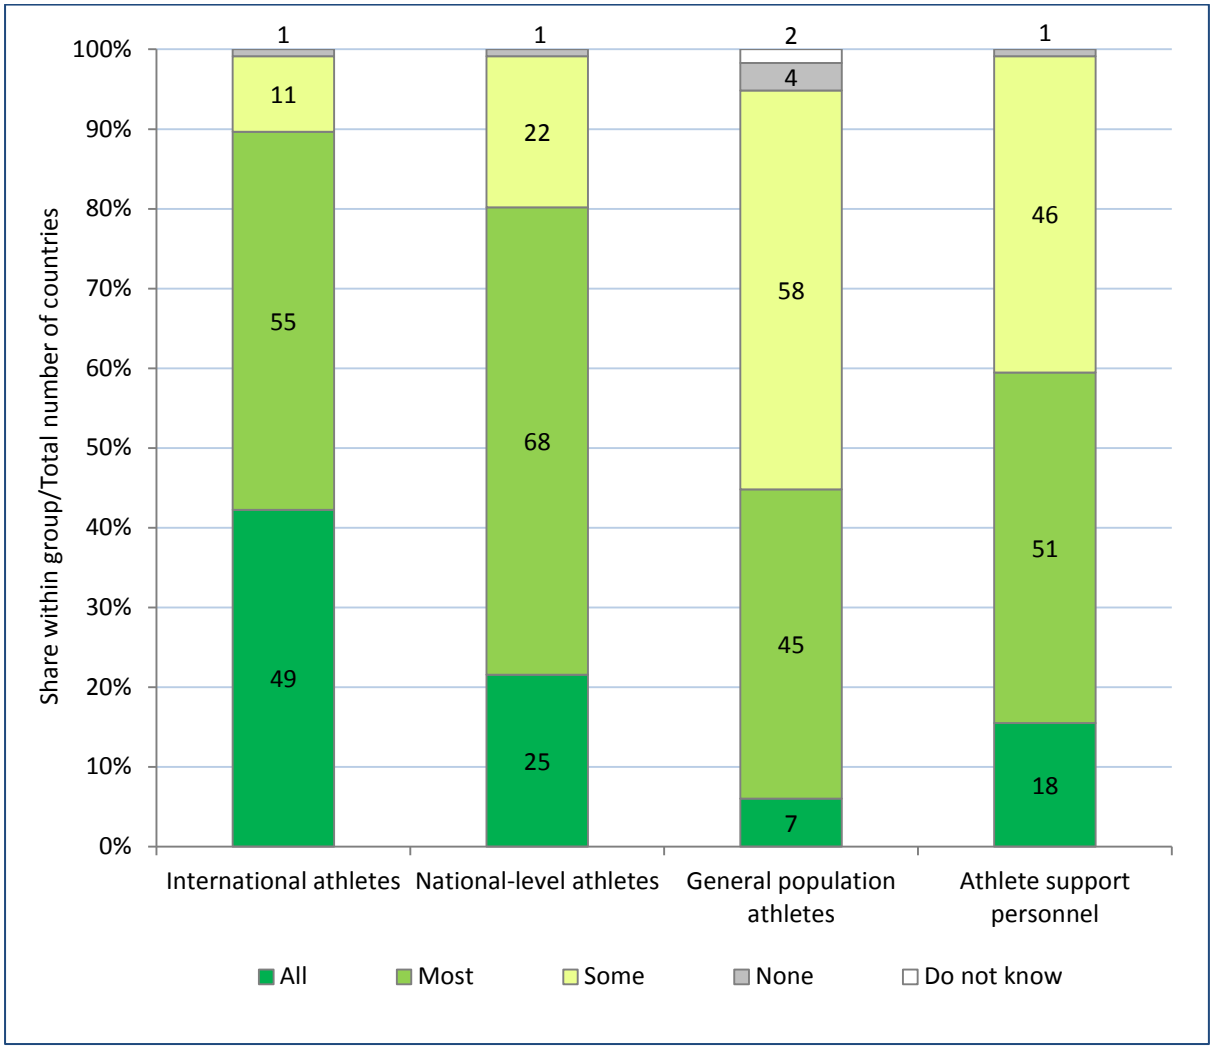
Convention Part IV. Education and Training

31. States Parties have an educational responsibility per the Convention to “support, implement or devise” education and training programmes, with specific anti-doping themes for the general population and additional information for competitive athletes and their support personnel.

32. Figure 8 shows the extent of States Parties’ adherence to this responsibility. Nearly 90% of States Parties provide anti-doping training to all or most international athletes, while the remaining 10% provide only some or no training. Overall access to training is similarly high for national-level athletes, although only 20% of countries provide training to all national athletes, compared to more than 40% for international athletes.

33. While States Parties ensure that nearly all international and national-level athletes have access to anti-doping training, the general population and athlete support personnel receive much less access to anti-doping information or training. Only 7 countries offer anti-doping education or training programmes for the entire general population athletes and 18 for all athlete support personnel. A larger proportion of countries offer only some training, about 50% and 60%, respectively, to the general population and athlete support personnel.

Figure 8: Access to anti-doping information and training, per athlete type

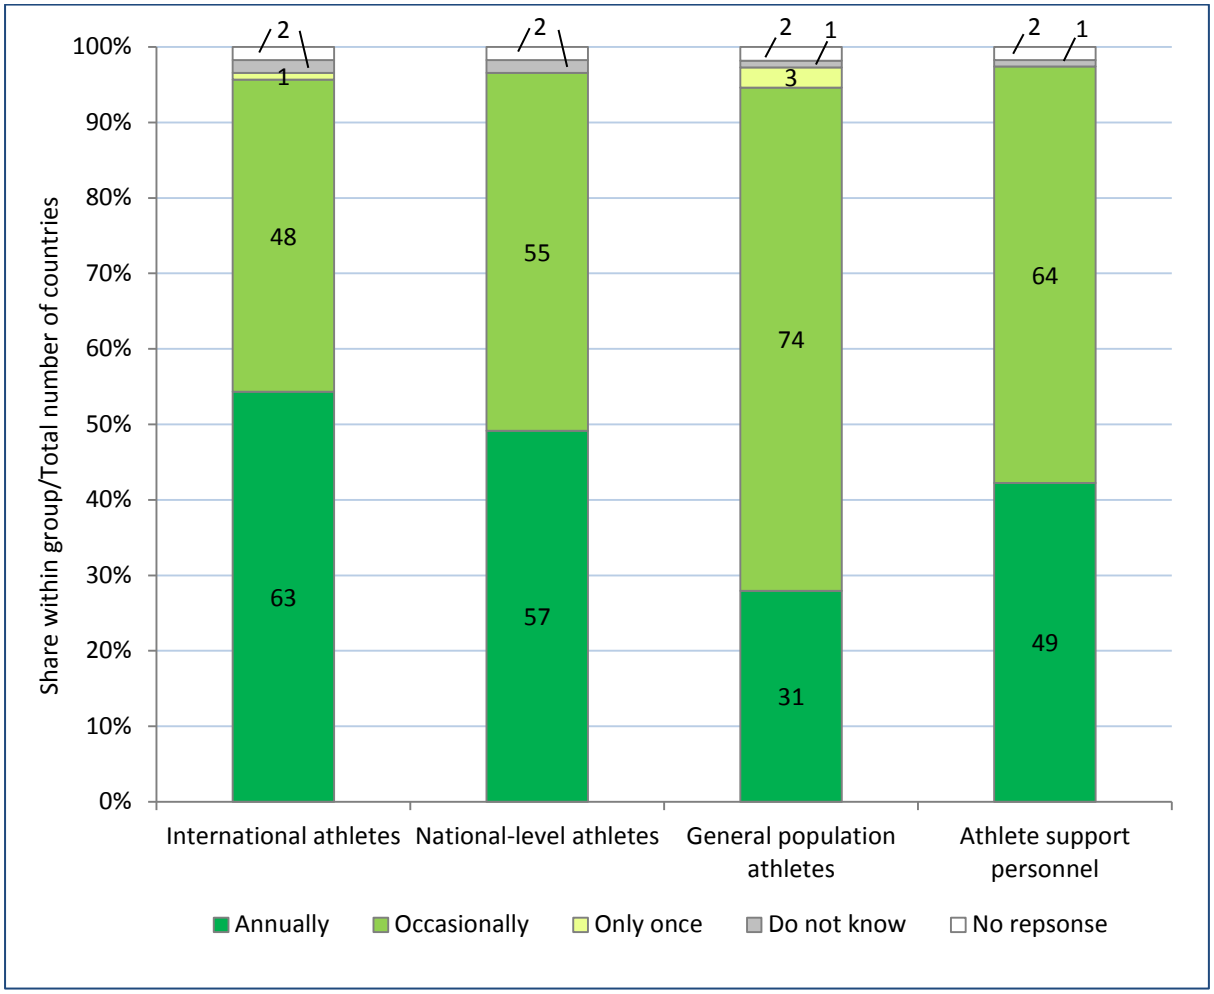


Reading note: In 49 countries (42% of all countries), all international athletes received have anti-doping training.

Note: 116 countries responded to Questions 20, 21, 22 and 23. "What proportion of [athlete category] received education and training programmes about doping?" 116 States Parties responded to each question.

34. The frequency of access to training is an important criteria for monitoring Part IV of the Convention given that the information provided in education and training needs to be up-to-date in terms of accuracy and relevancy. Figure 9 shows that for all athletic levels, training is mostly occasional (less than annual) or sometimes annual. Again, international athletes receive training more frequently than other groups, with 63 countries offering annual training (about 54%) and another 48 (38%) offering occasional training. The general population of athletes receives anti-doping education and training the least frequently in most countries, with 64% of countries offering only occasional training. A further analysis of the combination of coverage and frequency of training would effectively demonstrate the strength of national education and training programmes.

Figure 9: Frequency of training, per athlete type



Reading note: In 63 countries (54% of all countries), all international athletes received annual anti-doping training.
Note: 116 countries responded to each Question 20.2, 21.2, 22.2 and 23.2. "How often do [athlete category] receive anti-doping education and training?"

Convention Part V. Research

35. National research is conducted as a means to improve training conditions for athletes and supporting personnel, to reduce the interest in doping and to increase information around the short- and long-term consequences of doping. The first subsection provides a quick overview of international cooperation in research. The second subsection on Article 24 goes into greater detail on which States Parties are conducting research and in what areas.

International cooperation in research

36. The Convention supports the exchange of anti-doping research results within the limits of relevant national and international rule, hoping to improve the effectiveness and quality of collaboration in anti-doping research. The variety of anti-doping research fields across countries underscores the importance of such collaboration.

37. International cooperation in research is quite attractive among States Parties reporting to ADLogic and conducting research. Nearly 70% of States Parties (41 countries) have shared their research results with international counterparts and WADA. Thirteen countries have not yet shared their results, indicating the intention to do so, and only four have not shared their research.

38. The manner in which research is conducted is also monitored by ADLogic. Nearly half of all countries take some measures so that their results are in compliance with the principles of the World Anti-Doping Code.[13]

Article 24: Promotion of Research in Anti-Doping Matters

Article 24 – Promotion of research in anti-doping

States Parties undertake, within their means, to encourage and promote anti-doping research in cooperation with sports and other relevant organizations on:

(a) prevention, detection methods, behavioural and social aspects, and the health consequences of doping;

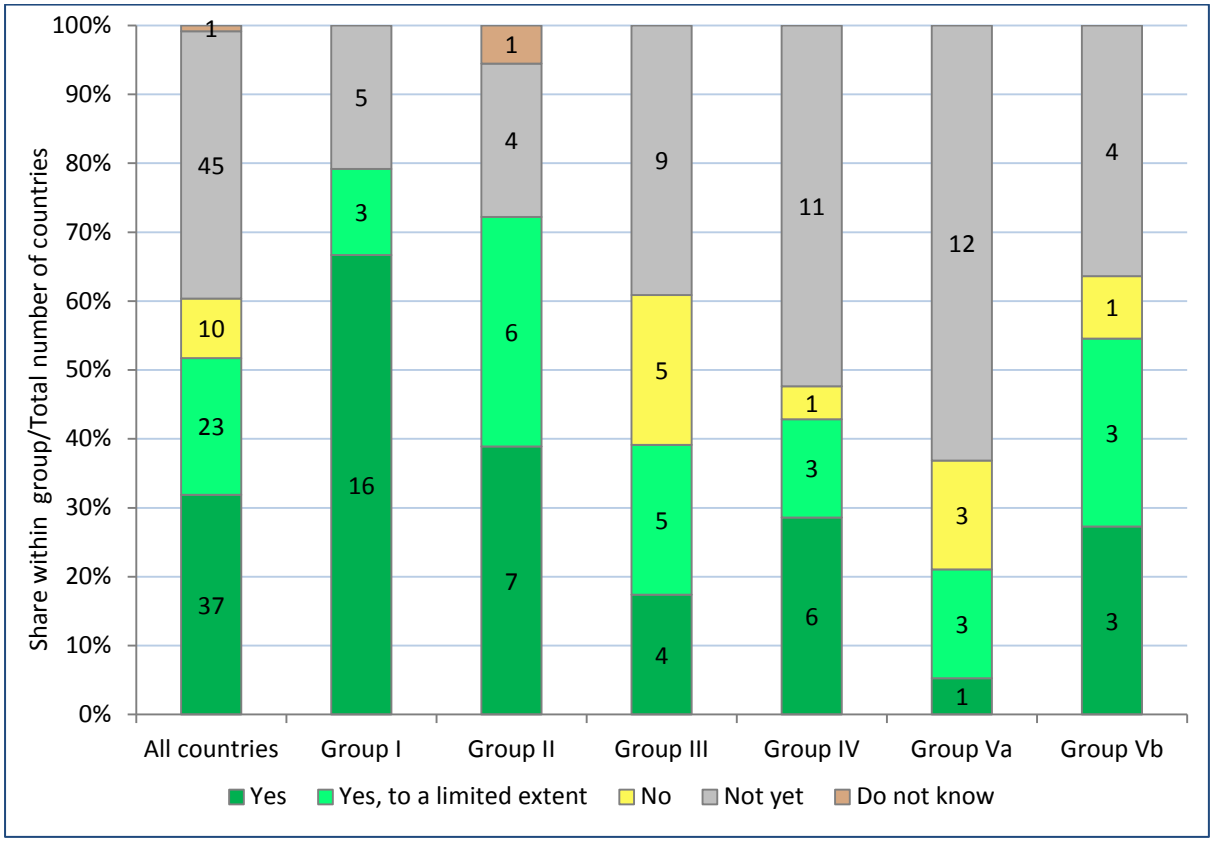
(b) ways and means of devising scientifically-based physiological and psychological training programmes respectful of the integrity of the person;

(c) the use of all emerging substances and methods resulting from scientific developments.

39. Through its Article 24, the Convention aims to strengthen the capacities of anti-doping efforts by focusing research on the effects of doping as well as on alternative substances and methods. In 2015, nearly 50% of States Parties (55) have not initiated any research on anti-doping issues (Figure 10). Thirty-seven countries (32%) have undertaken research, the majority belonging to Group I (43% or 16 countries), and another 23 countries had some limited research in place.
40. At a regional level, some groups have been more active than others in terms of developing research. More than 70% of countries in Groups I and II have some form of anti-doping research (limited and unlimited), compared to around 50% in Group Vb, and around 40% in Groups III and IV. Group Va has the lowest proportion of research of all groups, with about 80% of countries not yet involved in any form of research.

[13] Among the 116 countries responding to Question 27 answering “yes” or “yes to a limited extent”.

Figure 10: Efforts to promote anti-doping research, total and by region



Reading note: 37 countries or about 30% of all countries have anti-doping research.
Note: 116 countries responded to Question 27. "Has any anti-doping research been undertaken or supported?"

41. Table 2 summarizes the current state of countries' research status compared to 2013.[14] Progress is indicated in light green and retreat is indicated in light orange. Light grey areas indicate no change since 2013.

42. During the last two years, there has been little progress in increasing the spread of anti-doping research in States Parties. In 2015, 23 countries had regressed in terms of their research status compared to 2013 (in light orange), while 25 improved somewhat during this period (in light green). Forty-three maintained status quo.

43. The overall number of States Parties conducting some form of research (limited or not) increased by 6, from 54 in 2013 to 60 countries in 2015. Nine countries which had not yet started research in 2013 had some form of research (limited or not) by 2015; conversely, 11 countries which had initiated research in 2013 were 'not yet' conducting any in 2015. Countries appear to flow in and out of research modes in relatively short periods of time.

[14] Based on the same 116 countries analysed in 2015, and including data for those same countries in 2013.

Table 2: Changes in research orientation between 2013 and 2015

		2013						
		Yes	Yes, to a limited extent	Not yet	No	Do not know	No response	Total
2015	Yes	22	7	4	0	2	2	**37**
	Yes, to a limited extent	11	2	5	1	1	3	**23**
	Not yet	5	6	16	7	3	8	**45**
	No	0	0	5	3	0	2	**10**
	Do not know	1	0	0	0	0	0	**1**
	Total	**39**	**15**	**30**	**11**	**6**	**15**	**116**

Notes: Light grey areas indicate no change in research status between 2013 and 2015. Light green indicates an improvement in research status and light orange a deterioration. 116 countries responded to Question 27. "Has any anti-doping research been undertaken or supported?"

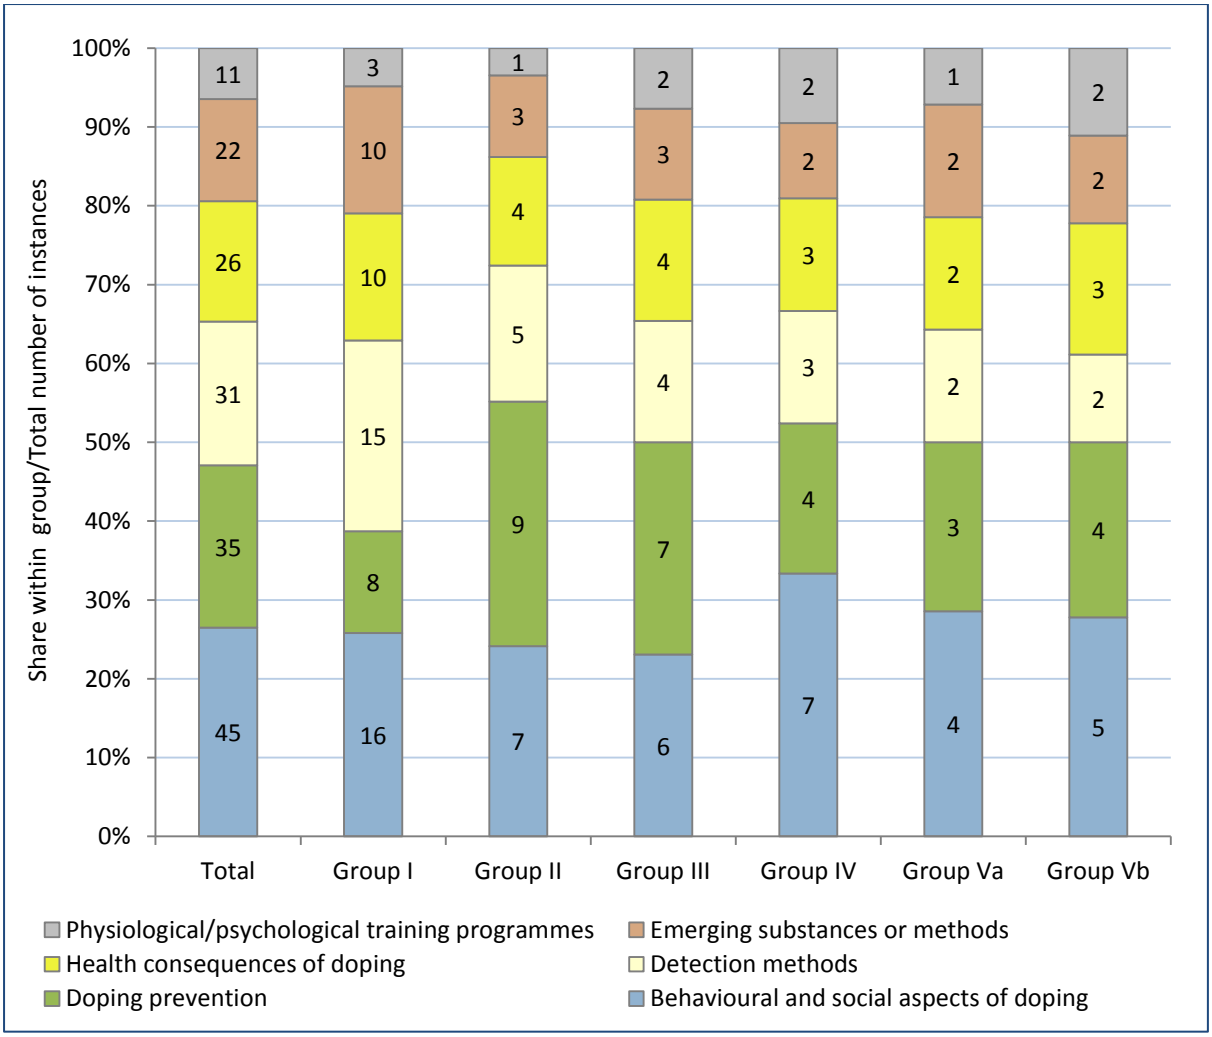
44. Some notable points which would require delving into a country-based analysis to understand the changes since 2013 are listed below:
    - Two fewer States Parties were leading research (37 compared to 39 in 2013).
    - Although 8 additional States Parties were involved in limited research in 2015 (23 compared to 15 in 2013), 11 had dropped the level of research (from unlimited to limited).
    - Five countries answered in 2013 that they were conducting research and in 2015 "not yet" (Argentina, Côte d'Ivoire, Italy, Slovakia, Slovenia).
    - Eleven countries answered in 2013 that they were conducting research, but that research was limited in 2015.

45. States Parties conduct research in various areas related to doping. National anti-doping research activity is concentrated around 6 major areas – namely, behavioural and social aspects of doping, doping prevention, detection methods, health consequences of doping, emerging substances or methods, physiological and psychological training programmes. Figure 11 depicts type of research conducted by 59 responding States Parties, as a total and grouped by their geographical regions.

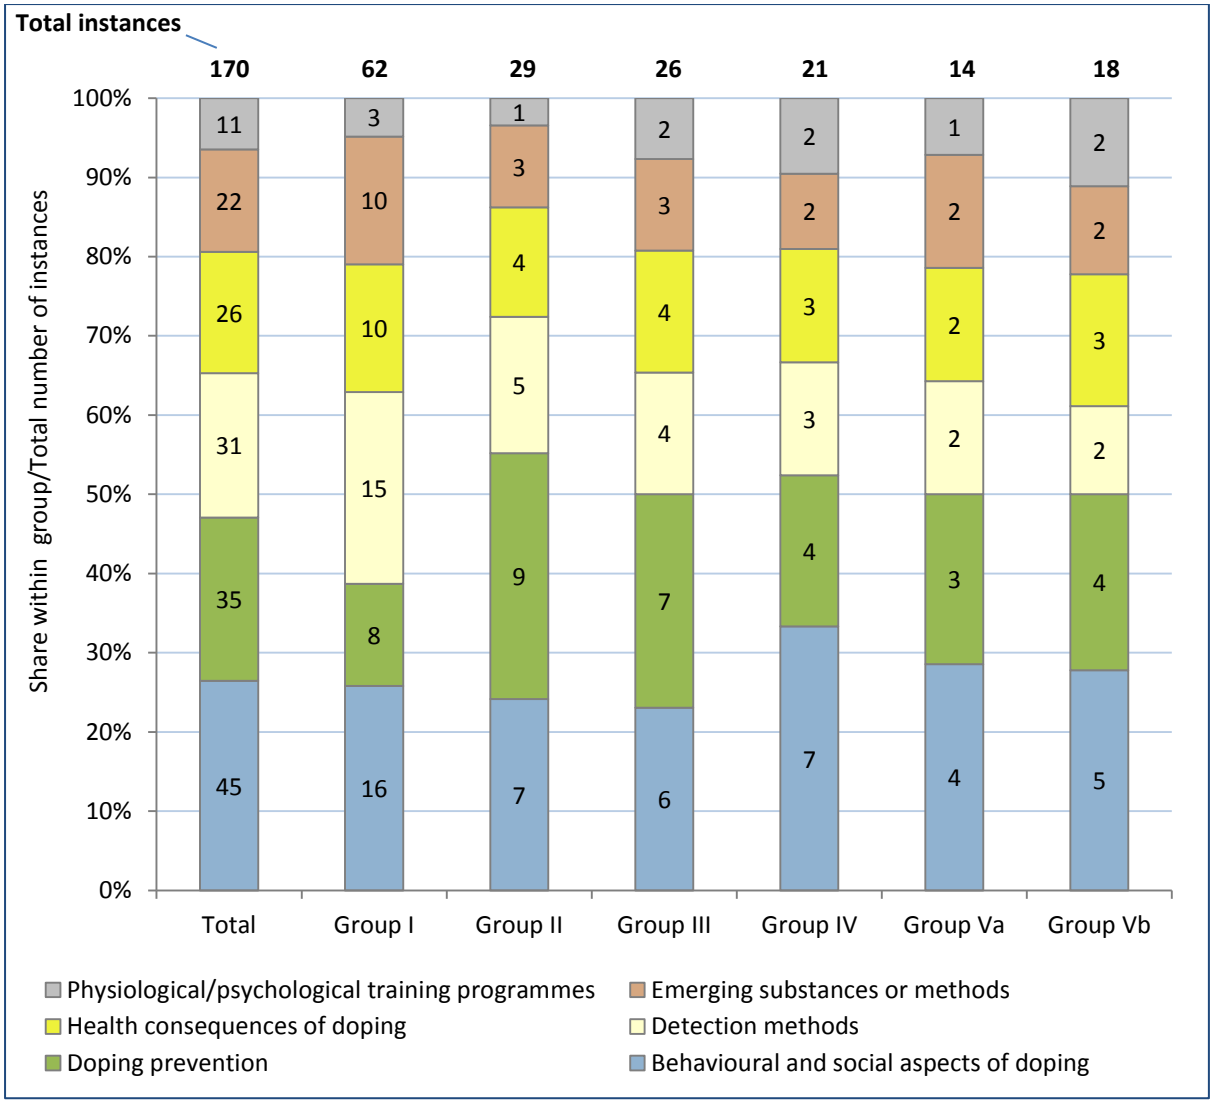
46. Overall, States Parties identified 170 areas of anti-doping research occurring at the national level (multiple answers possible per State Party). The majority of research across all States Parties is conducted in the behavioural and social aspects of doping (26% of 170 areas, or 45 countries), following by doping prevention (21% of 170 areas,

or 35 countries). The regional distribution is markedly similar to that of all respondents, with an exception for Group I which also engaged significantly in detection methods (24% of 62 areas identified, 16 countries). The preventive aspects of doping receive less results attention, as less than 40% of research focuses on health consequences of doping, emerging substances or methods and physiological and psychological training programmes.

Figure 11: Anti-doping research areas identified by States Parties, total and by region



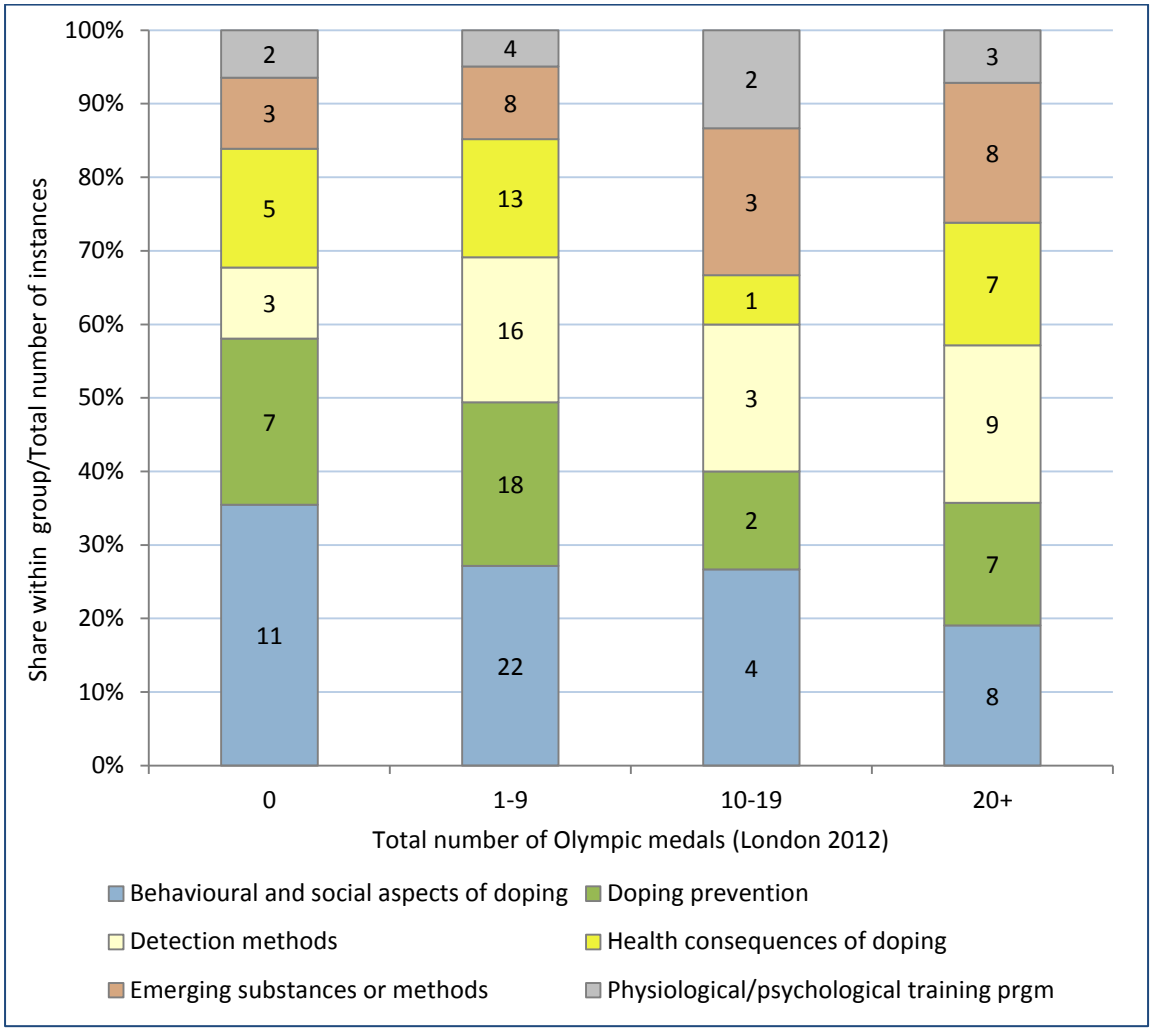
Reading note: 16 countries or 26 % of all research areas identified by States Parties in Group I conduct research on behavioural and social aspects of doping.
Note: 59 States Parties responded to Question 27.1. "What was the main area of focus?" 46 of these States Parties selected multiple answers for this question.



47. The types of research conducted might also be examined under the lens of the Olympic medals. Figure 12 shows the same data as Figure 11, but with States Parties grouped by the total number of medals. Highly-performing countries earning 20 or more medals have chosen a variety of research areas.[15] Compared to the global distribution in Figure 11 ('total' bar), high ranking countries appear to focus more on behavioural and social aspects of doping: 35% of countries are doing research in this area, compared to 26% at the global level. Countries whose Olympic performance is emerging (i.e. with less than 20 medals) engage in a distribution of research priorities more similar to the global distribution.

[15] Thirteen State Parties won 20 or more medals in London, but 11 responded to question 27.1 (Italy and Ireland did not).

Figure 12: Areas of national anti-doping research, by number of Olympic medals



Reading note: 22 countries with between 1 and 9 Olympic medals (50% in the group) conducted research on behavioural and social aspects of doping.
Notes: 59 States Parties responded to Question 27.1. "What was the main area of focus?" 46 States Parties selected multiple answers for this question.

48. Examining those 46 countries which provided multiple answers reveals some priority setting on research questions among States Parties.

- Five countries had research in all 6 areas: Algeria, Cuba, Germany, Japan and the United States of America.
- Three countries included 5 of the 6 research areas. They all had four areas in common: selected behavioural and social aspect of doping, detection methods, doping preventing, and health consequences of doping.
- 85% of countries' research included the behavioural and social aspects of doping (39 of 46 countries). The 7 countries which did not select this research line conducted research focusing on emerging substances or methods.
- Table 3 shows the number of times the 6 research areas were cited by the 46 States Parties indicating multiple research lines. Behavioural and social aspects

of doping account for 25% of all lines of research, followed by doping prevention (20%) and detection methods (18%).

Table 3: Multiple lines of research in 46 States Parties

	Total counts	Share of total counts
Behavioural and social aspects of doping	39	25%
Doping prevention	32	20%
Detection methods	29	18%
Health consequences of doping	25	16%
Emerging substances or methods	22	14%
Physiological and psychological training programmes	10	6%
Total	**157**	**100%**

Reading note: Doping prevention was cited 32 times among the 46 States Parties indicating 157 lines of research.
Note: Question 27.1. "What was the main area of focus?" Only the 46 States Parties selecting multiple answers for this question are included in this table.

Conclusion:

The role of the Secretariat is neutral in conducting the above exercise. The overall detail analysis purports to provide key information to all concerned parties. It may serve to guide corrective measures or assist public authorities to address areas requiring improvement to reach the goal set in the objectives of the Convention.
The Anti-Doping Fund may also serve to support actions needed by States Parties to respond to the gaps and inconsistencies emphasized in the report.
