

Responses from Siku-Inuit-Hila project, to the questions asked to the expert meeting held by UNESCO in Monaco March 2009

- Where are the most severe gaps in knowledge and action with respect to the challenge that climate change poses for Arctic sustainable development?

- What needs to be done to ensure a comprehensive, interdisciplinary and multi-actor approach to achieving sustainable development in the Arctic?

- What modalities are required for a long-term and sustained approach to addressing sustainable development in the Arctic?

•Presentation by Lene Kielsen Holm, Inuit Circumpolar Council

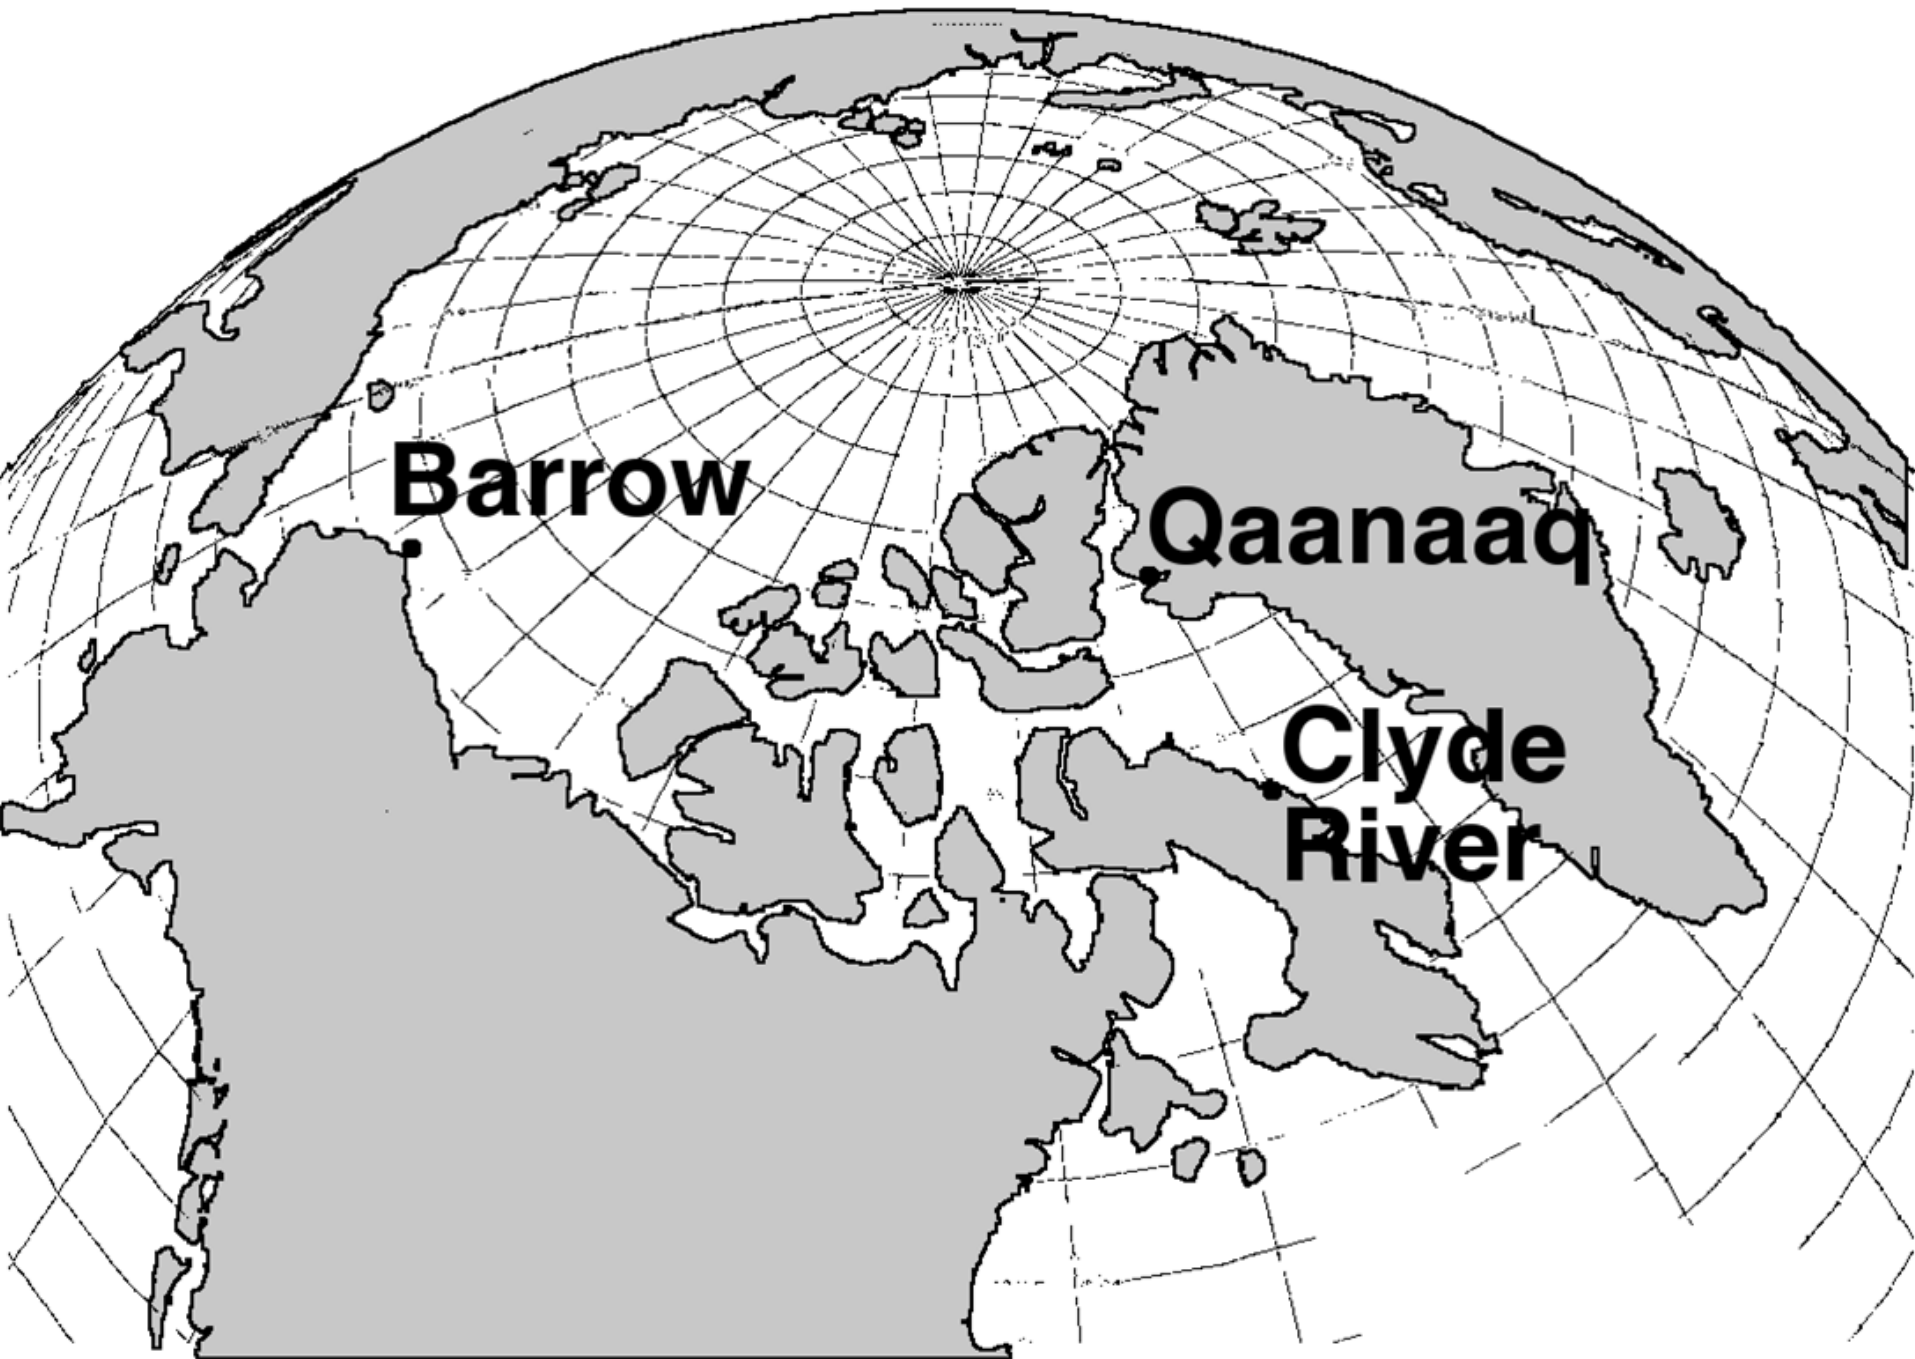

Siku-Inuit-Hila

2007-2010

Recommendations:

1. Where ever it is possible I recommend that involving local people with their knowledge and local ideas should be aimed at, so that they become part of the research plan and outcome/s.

2. At least local authorities should be informed about research projects that are to be conducted.

3. The knowledge gained from research projects should be disseminated in the local language/s.
