The MAB Programme

UNESCO's Man and the Biosphere (MAB) Programme was launched in 1971 with the aim of promoting interdisciplinary research, training, and communications in the field of ecosystem conservation and the rational use of natural resources. The MAB Programme is suited to respond to the results of the 1992 United Nations Conference on Environment and Development (UNCED) and especially the objectives of the Convention on Biological Diversity.

Biosphere reserves are areas of terrestrial and coastal marine ecosystems which are internationally recognized under the MAB Programme. Biosphere Reserves are much more than just protected areas as they are designed to promote and demonstrate a balanced relationship between people and nature. They are nominated by national governments and remain under the sovereign jurisdiction of the States where they are situated. Biosphere reserves form a World Network for promoting cooperative research and monitoring as well as exchanges of information. A key element of this Network is the development of

strong regional sub-networks.

The definition, criteria and designation procedure of biosphere reserves are set out in the Statutory Framework adopted by the UNESCO General Conference in 1995. The Seville Strategy for Biosphere Reserves identifies objectives for biosphere reserves at the site, national and international levels. Many sites have been designated for over ten years and hence are subject to the Periodic Review foreseen under Article 9 of the Statutory Framework. This Review aims to encourage the authorities concerned to revise the status and functioning of their biosphere reserves in the light of the Statutory Framework.

This review can lead to improved integration of conservation, development and scientific research concerns in existing biosphere reserves, extension of existing biosphere reserves, and the establishment of transboundary biosphere reserves for enhanced international cooperation to sustainably manage shared ecosystems.

Le programme sur l'Homme et la biosphère (MAB) a été lancé en 1971 afin de promouvoir la recherche interdisciplinaire, la formation et la communication dans le domaine de la conservation des écosystèmes et de l'utilisation rationnelle des ressources naturelles. Le Programme MAB peut ainsi répondre aux préoccupations de la Conférence des Nations Unies sur l'Environnement et le développement durable (CNUED) et, en particulier, aux objectifs de la Convention sur la Diversité biologique.

Les réserves de biosphère sont des aires portant sur des écosystèmes terrestres et côtiers/marins reconnues au niveau international dans le cadre du Programme MAB. Les réserves de biosphère sont beaucoup plus que de simples aires protégées puisque leur objectif est de promouvoir et de démontrer une relation équilibrée entre les populations et leur environnement. Elles sont proposées par les gouvernements nationaux et demeurent sous la juridiction

souveraine des Etats où elles sont situées. Les réserves de biosphère forment un Réseau mondial qui permet de promouvoir la recherche en coopération, la surveillance continue et l'échange d'informations. Un élément clé de ce Réseau est la constitution de sous-réseaux régionaux très actifs.

La définition, les critères et la procédure de désignation des réserves de biosphère sont établis par le Cadre statutaire adopté par la Conférence générale de l'UNESCO en 1995. La Stratégie de Séville pour les réserves de biosphère définit des objectifs pour les réserves de biosphère à différents niveaux, celui des sites, et aux niveaux national et international. De nombreux sites ont été désignés depuis plus de dix ans et doivent donc faire l'objet de l'examen périodique prévu à l'article 9 du Cadre statutaire.

Cet examen vise à encourager les autorités concernées à revoir l'état et le fonctionnement de leurs réserves de biosphère à la lumière des critères du Cadre statutaire.

El Programa de la UNESCO sobre el Hombre y la Biosfera (MAB) fue lanzado en 1971 con el fin de promover la investigación interdisciplinaria, la formación y la comunicación en el campo de la conservación de los ecosistemas y de la utilización racional de los recursos naturales. El Programa MAB responde así a las preocupaciones de la Conferencia de las Naciones Unidas sobre el Medio Ambiente y el Desarrollo y, en particular, a los objetivos de la Convención sobre la Diversidad Biológica.

Las Reservas de Biosfera son zonas de ecosistemas terrestres o costeros/marinos, o una combinación de los mismos, reconocidas en el plano internacional como tales en el marco del Programa sobre el Hombre y la Biosfera (MAB) de la UNESCO. Las Reservas de Biosfera son mucho más que simples zonas protegidas dado que son designadas para promover y demostrar una relación equilibrada entre las poblaciones y la naturaleza. Las Reservas de Biosfera son propuestas por los gobiernos nacionales y quedan bajo la soberanía de los estados donde están ubicadas.

La definición, los criterios y el procedimiento de designación de las Reservas de Biosfera están establecidos en el *Marco Estatutario* adoptado en 1995 por la Conferencia General de la UNESCO. *La Estrategia* de Sevilla para las Reservas de Biosfera identifica los objetivos de las Reservas de Biosfera a niveles de reserva individual, nacional e internacional. Muchas de las Reservas de Biosfera han sido designadas desde hace más de diez años y, en consecuencia, son objeto de una Revisión Periódica prevista bajo el Artículo 9 del *Marco Estatutario*. El propósito de esta Revisión Periódica es el de incitar a las autoridades pertinentes a revisar sus Reservas de Biosfera según los criterios establecidos por el Marco Estatutario.

Esta Revisión puede conducir a una mejor integración de la conservación, del desarrollo y de la investigación científica en las reservas de biosfera existentes, a la extensión de las mismas o a la creación de reservas de biosfera transfronterizas para reforzar así la cooperación internacional en vista de una gestión durable de los ecosistemas comunes.
