INTRODUCTION

The **Global Ethics Observatory (GEObs)** is a system of databases with worldwide coverage in bioethics and other areas of applied ethics in science and technology such as environmental ethics, science ethics and technology ethics. The observatory maps existing ethics infrastructures around the world, and is designed as a collaborative, consultative and comparative tool for the purposes of:

- Building capacity for ethical decisions and actions in science and technology at the national, regional and global levels by facilitating the creation of linkages among policy-makers, ethicists, researchers, scientists, civil society and the private sector. This is particularly important for countries looking to reinforce their ethics infrastructure, and also for people and institutions looking for partners, especially in developing countries.
- Focusing UNESCO's current and future capacity building activities for ethics of science and technology in areas of need.

- Establishing a comprehensive and reliable baseline for measuring the actualisation of UNESCO's programme in ethics of science and technology, including related UNESCO normative instruments.

The GEObs currently consists of the following databases:

- **Database 1:**
Who's Who in Ethics (Ethics Experts)
- **Database 2:**
Ethics Institutions
- **Database 3:**
Ethics Teaching Programmes
- **Database 4:**
Ethics Related Legislation and Guidelines
- **Database 5:**
Codes of Conduct

These databases collectively provide a valuable resource hub of ethics activities, thus establishing a crucial platform upon which UNESCO can support and advance such activities around the world.

New databases are in planning, and would come online in the future.

In addition to a search function for each database, the system also provides users with an **Interactive Geographical Search** option. These search functions are outlined in more detail in this booklet.

The system is freely accessible online to the general public at:

www.unesco.org/shs/ethics/geobs

It was officially launched in December 2005, and has since been continuously expanded and updated by UNESCO.

From the GEObs Home Page (see Figure 1), users are able to access the different databases by clicking on the associated buttons or links. Within the system, the databases are designated as GEObs1, GEObs2, GEObs3, GEObs4 and GEObs5 respectively. A button for the Interactive Geographical Search option is also available on this page.

The GEObs databases are available in the six official languages of UNESCO: Arabic, Chinese, English, French, Russian, and Spanish. Users are able to switch between the languages by using the Language Selection Tool (see Figure 2) located on the top right hand corner of all GEObs screens.

Figure 1: GEObs Home Page

Figure 2: GEObs Language Selection Tool

ETHICS EXPERTS WHO'S WHO?

The **Who's Who in Ethics** database is a compilation of information regarding ethics experts around the world. Experts are determined via a peer review process, based on a combination of factors, including the quality and focus of recent publications in ethics of science and technology; involvement in ethics-related activities; involvement in ethics

of science and technology research projects; and the level and extent of ethics component in the individual's educational and professional background. This database seeks to efficiently connect specific needs and requests to the appropriate experts, as well as to encourage collaboration among experts at the local, regional and international levels.

SEARCH TOOL

With the GEObs1 Search Tool (see Figure 3), users are able to search for experts within the database using one or more of the following criteria:

- Name (text search by First name or Surname)
- Country (UNESCO member and observer states)
- Region (UNESCO regions)
- Professional background (e.g. Medicine, Nursing, etc.)
- Activities in Ethics (e.g. Teaching, Research, etc.)
- Affiliated Institutions (e.g. NGO, University, etc.)
- Areas of Interest in Applied Ethics (e.g. Medical Ethics, Nursing Ethics, etc.)
- Expertise in Ethics (e.g. Bioethics, Environmental Ethics, etc.)
- Institutional Involvement in UNESCO (e.g. Member IBC, Member COMEST, etc.)

Figure 4: GEObs1 Search Results Page

SEARCH RESULTS

On the Search Results Page (see Figure 4), entries found are displayed in pages and users are able to:

- View the data of a particular entry found (see Figure 5)
- Sort results by Surname or Country
- Navigate between pages of search results
- Manipulate the number of entries to be displayed per page
- Change existing search criteria
- Initiate a new search
- Navigate between different databases or return to Home Page

VIEW PAGE

When users click the “View” link on the Search Results Page, a View Page is generated as a pop-up window. On this page, data of a particular ethics expert is displayed. This includes:

- Full Name of Expert
- Title
- Workplace and Function
- Contact Information
- Professional Background
- Activities in Ethics
- Institutional Affiliations
- Expertise in Ethics
- Areas of Interest in Applied Ethics
- Institutional Involvement in UNESCO
- Current Research Projects
- Recent Publications (Journals, Chapter in Books, Books)

On this page, the options to Print and Email Data are also available to users.

The **Print function** will generate a PDF file, which can either be saved to a local drive or be sent to a printer.

The **Email Data function** will generate an email with a hyperlink to the specific entry, sent to an email address of the user’s choosing.

ETHICS INSTITUTIONS

The **Ethics Institutions** database provides information on departments, institutes, centres, commissions, councils, committees, review boards, societies, associations and other relevant entities in the area of ethics of science and technology. Institutions within the database have been validated against their

mission, activities and publications as a confirmation of their active involvement in the field of ethics of science and technology. This database provides a platform for connecting institutional expertise to specific needs, and for exchanging expertise and experiences among institutions.

SEARCH TOOL

The GEObs2 Search Tool (see Figure 6) enables users to search for ethics institutions using one or more of the following criteria:

- Region or Country
- Type of Organization (selecting a type will unlock further search options as follow: Type of Institution, Level of Operation, Founding Institution, Membership Composition, Meeting Frequency and Type of Secretariat)
- Foundation Date
- Areas of Applied Ethics (e.g. Ethics and Law, Food Ethics, etc.)
- Activities (e.g. Advocacy, Case Consultation, etc.)

The screenshot displays the GEObs2 Search Tool interface. At the top, there are language selection buttons for Français, Español, Русский, العربية, and 中文. Below this is the logo for the Global Ethics Observatory (GEObs). A navigation bar includes links for Home, GEObs1, GEObs3, GEObs4, GEObs5, and Geographical Search. The main heading is "Database 2: Ethics Institutions" with a sub-heading "Find an institution, a center, a commission, or a committee in the area of ethics". A note states "There are currently 200 institutions registered in the database." The search tool is organized into several sections with dropdown menus and radio buttons:

- Region:** Select a region: (dropdown)
- Country:** Select a country: (dropdown)
- Type of Organization:**
 - Any
 - Department, Institute or Center
 - Commission, Council, Committee, Review Board
 - Society, Association
- Foundation Date:** Select a date range: (dropdown)
- Areas of Applied Ethics:** Select an area: (dropdown)
- Activities:** Select an activity: (dropdown)
- Search:** (button)

Below the main search tool, there are three smaller, overlapping screenshots showing different views of the search tool, including filters for "Type of Institution", "Level of Operation", "Founding Institution", "Membership", "Meetings", "Secretariat", and "Foundation Date".

Figure 6: GEObs2 Search Tool

SEARCH RESULTS

The GEObs2 Search Results Page (see Figure 7) contains all the features outlined previously, and entries can be sorted by Official Name and Country Classification.

Topics Included in Syllabus

- Animal Ethics
 - Animal rights
 - Biodiversity
 - Biotechnology
 - Economy/costs
 - Ethical theories
 - Experimentation
 - Genetically modified organisms
 - History of ethics
 - Introduction into ethics
 - Law/legislation
 - Moral status of animals
 - Non-maleficence
 - Policy
 - Responsibilities
 - Sentience
- Beneficence
- Biosphere
- Cloning
- Endangered species
- Ethics committees
- Gene therapy
- Genetics – genomics
- Intrinsic value
- Justice
- Media
- Nature
- Patenting
- Research
- Rights
- Stem cells

The Ethics Teaching Programmes database contains descriptions of existing teaching programmes within the field of ethics of science and technology. Teaching programmes have been collected and validated during meetings of ethics teaching experts held in various parts of the world. This component is strategically positioned to support and encourage collaboration in the design of ethics curricula.

SEARCH TOOL

The GEObs3 Search Tool (see Figure 9) includes the following search options:

- Country or Region
- Area of Ethics
- Name of Teacher (text search)
- Faculty/Department/School
- Entry Requirement/
Academic Background of Students
- Level of University Teaching
- Course Language
- Number of Students
- Teaching Hours
- Student Working Hours
- Status of Programme
- Objectives of Programme
- Mandatory Study Materials
- Recommended Study Materials
- UNESCO Documents Used
- Topics in Syllabus
- Teaching Methodology
- Evaluation of Students

Evaluation of Students	Essay Word Length/Pages: 12 Number of Essays: 1 Topic: Any topic in Bioethics. Attendance Participation in seminars Other: Originality, capacity of reasoning and using the ethical principles and theories in evaluation of a particular case or a clinical situation
Evaluation of the Course	Is the program evaluated? Yes Frequency: Each semester Method: Student evaluation (anonymous questionnaires) and faculty staff evaluation.
Topics included in Syllabus	Ethics and Law Abortion Ethics and Law Assisted Ethics and Law Bioethics Ethics and Law Bioethics Ethics and Law Biobanking

Figure 11: GEObs3 View Page

ETHICS RELATED LEGISLATION & GUIDELINES

This database is designed as a comparative tool of ethics related legislation and guidelines introduced within various countries to normalize activities in the fields of science and technology. The descriptions of legal instruments in this database have been carefully

compiled and analysed by legal experts working with UNESCO on this initiative. It establishes a valuable platform for sharing of knowledge and experiences in policymaking and management of ethical issues in science and technology.

SEARCH TOOL

Users are able to search this database using one or more of the following terms (see Figure 12):

- Region or Country
- Bioethical Themes (currently covering medical research with human beings; access to health care and essential medicines; genetic counselling; protection of future generations; freedom of scientific research; human cloning (reproductive and therapeutic cloning); organ transplantation; biobanking; non-discrimination in health care; protection of genetic resources; and ethics committees)
- Topics from UNESCO Declarations (selecting a declaration will unlock further search options to enable refined searches according to specific articles of the declaration)
- Legal Categories (covering Treaties, Constitution, Domestic Laws, Authoritative Case Laws and Guidelines)

Figure 12: GEObs4 Search Tool

The database currently covers the following UNESCO declarations:

- *Universal Declaration on Bioethics and Human Rights*
- *International Declaration on Human Genetic Data*

All bioethical themes have been linked with specific articles within the UNESCO declarations, and all legal instruments have also been linked with specific bioethical themes and their associated articles of the UNESCO declarations. Linking of instruments to articles of the UNESCO declarations is intended to provide a clearer picture of how the declarations are impacting the legal repertoire of countries.

In terms of legal categories, the following should be noted:

- **Treaties** refer to a limited list of international normative instruments, each of which is linked to bioethical themes and articles of the UNESCO declarations. This cross-referencing is available via the “List all Treaties” option on the search tool.
- **Domestic laws** include all binding instruments that have a clear enforcement mechanism, while all non-binding instruments are classified as **Guidelines**.
- **Authoritative case laws** are limited to influential cases only.

Additional bioethical themes, legal categories, treaties and articles of other ethics related UNESCO declarations could be added in the future.

SEARCH RESULTS

Entries on the GEObs4 Search Results Page are displayed with indications of applicable bioethical themes selected by the user, and can be sorted by Country, Title and Legal Category (see Figure 13).

VIEW PAGE

The GEObs4 View Page (see Figure 14) consists of the following data items:

- Title of instrument
- Legal Category
- Country
- Years of adoption, entering into force and publication
- Applicable topics from declarations
- Short description

Under the **Applicable topics from declarations** section, bioethical themes are listed with the associated articles from the UNESCO declarations that are applicable to the instrument.

The **Short description** section provides excerpts of provisions within the instrument as related to specific articles of the declarations, organized by bioethical themes.

If specific theme(s) and article(s) are specified for the search, the **Short description** section will only display the provisions related to the requested theme(s) and article(s). This feature allows users to filter and focus the information within the database for very specific purposes.

In order to assist users to place the legal instruments within the appropriate national legal contexts, the database provides brief explanations of national legal systems, accessible by clicking on a country’s name, either on the Search Results Page or View Page. Whenever available, these explanations are provided via official websites. Otherwise, non-interpretative descriptions are provided.

Furthermore, neutral and objective explanations of the instrument or a particular provision are included through the various “comments” links if these are deemed necessary to enhance users’ understanding of the information. Whenever available, a link to and official website containing the full text of the instrument are provided.

Although this database can be used as a comparative tool of ethics related legal instruments across various countries, it should be clarified that it is not meant to be a checklist or reporting tool of different countries, but rather an inspirational and educational tool.

Figure 14: GEObs4 View Page

CODES OF CONDUCT

This database functions as a comparative tool for codes of conduct related to the ethics of science and technology issued by professional entities in the private and public sectors. These codes have been collected by or submitted to

UNESCO for analysis so that common principles can be identified. It is designed to facilitate the exchange of information and experiences, as well as to assist professional entities seeking to establish their own codes of conduct.

SEARCH TOOL

The database can be searched using one or more of the following criteria (see Figure 15):

- Text Search (search for specific words in the titles or providers of the codes)
- Region or Country
- Geographical coverage
- Profession and/or discipline (ILO ISCO-88)
- Nature of the code
- Field of activity (e.g. Information Technology, Psychology, etc.)
- External principles (common principles identified thus far)
- Internal principles (common principles identified thus far)

In order for a code to be included in the database, the following criteria must be met:

- **Provider of the Code:** The code must be issued by an entity dealing with science and technology issues, with the intention to regulate/inspire/educate the behaviour of its own members (individuals and/or institutions) or addressing scientists in general. Regulations issued by legislative bodies, and thus addressing all citizens, have been excluded from the collection.
- **Addressee of the Code:** The code must concern professionals within scientific professions or disciplines in any area of science. The addressees should be members/employees of the organization providing the code or scientists in general. Codes that exclusively concern non-professionals, for example students, have not been included in the collection.
- **Content of the Code:** A code must have a normative content: ethical principles, values, norms, rules of conduct.

Figure 15: GEObs5 Search Tool

Under geographical coverage, the term global refers to codes issued by organizations which are represented in many (but not necessarily all) countries.

Under nature of the code, the system uses the following classifications proposed by Mark S. Frankel (*Journal of Business Ethics*, 1989; 8: 109-115):

- **Aspirational:** “(...) a statement of ideals to which practitioners should strive. Instead of focusing on notions of right and wrong, the emphasis is on the fullest realisation of human achievement.”
- **Educational:** a code that serves to enhance understanding of its provisions with extensive commentary and interpretation demonstrating how it can be helpful in dealing with ethical problems associated with professional practices.
- **Regulatory:** a code that “includes a set of detailed rules to govern professional conduct and to serve as a basis for adjudicating grievances. Such rules are presumed to be enforceable through a system of monitoring and the application of a range of sanctions.”

External principles are related to the social context and responsibility towards society. Internal principles refer to scientists’ individual professional behaviour on ethical issues.

SEARCH RESULTS

Users are able to sort GEObs5 search results by Title of Code, Provider of Code, Profession and/or Discipline, Country and Geographical Coverage (see Figure 16).

VIEW PAGE

Data elements displayed on the GEObs5 View Page include (see Figure 17):

- Title and Provider of code (websites if available)
- Country and Geographical coverage
- Profession and/or discipline
- Nature of code and date published
- Membership of organization, commitment to code, sanctions, and disciplinary body
- Fields of activity
- Applicable common external and internal principles, including extracted texts from the code relevant to the specific principle.

ID	82

INTERACTIVE GEOGRAPHICAL SEARCH

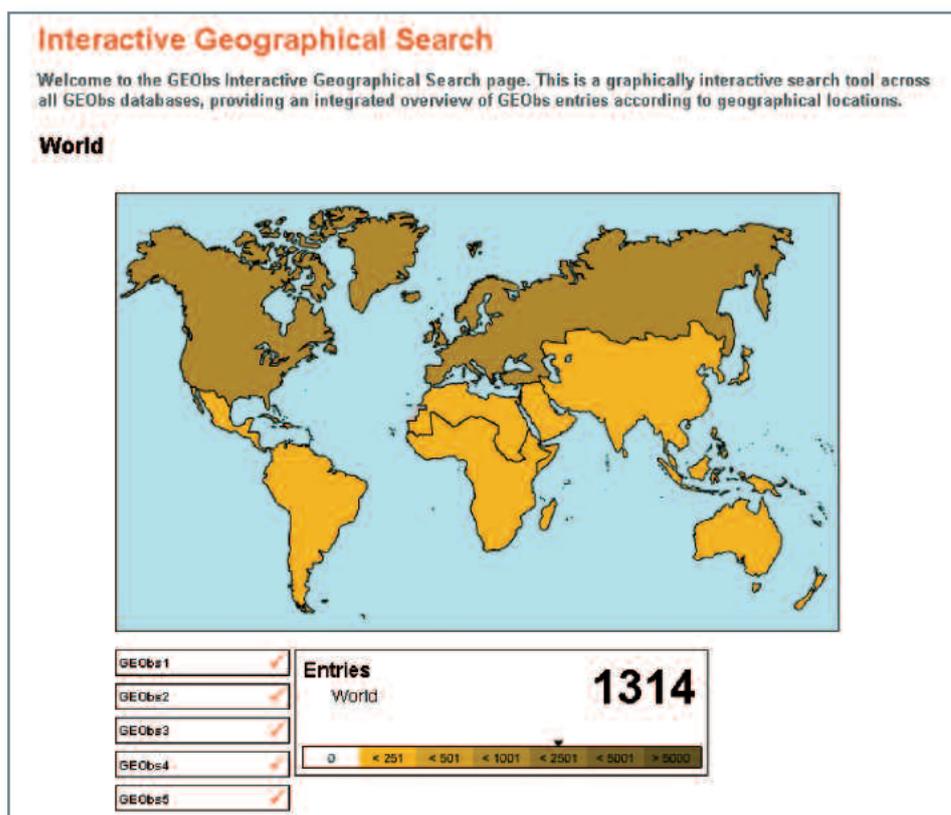

Figure 18: World View

DISCLAIMER

The designations employed and the presentation of material throughout this website do not imply the expression of any opinion whatsoever on the part of UNESCO concerning the legal status of any country, territory, city or area or of its authorities, or concerning the delimitation of its frontiers or boundaries.

The Interactive Geographical Search feature provides an integrated overview of all GEObs databases, represented in terms of data intensity on a world map (see Figure 18).

REGIONAL MAPS

The world map is divided into the following five regions of UNESCO:

- Africa
- Arab States
- Asia and the Pacific
- Europe and North America
- Latin America and the Caribbean

When a particular region is selected, the map changes to provide a closer view of all the countries within that region (see Figure 19).

When a country is selected on the regional maps, a pop-up window displaying all the entries of the selected database(s) for that country is activated (see Figure 20). Users can then choose to view individual data items displayed on this page. This feature provides users with a means of quickly obtaining an overview of all ethics experts, institutions, teaching programmes, legal instruments and codes of conduct within the GEObs databases.

It should also be noted that the collection of data for GEObs is a continuous process, and the absence of data for a particular country in any of the databases does not necessarily mean that data does not exist. It most probably means that further efforts to seek out that particular information is needed, and users should check the system again at a later date.

SEARCH TOOLS

Users are able to navigate the regional maps and the system as a whole by using the tools below:

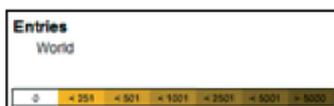

This tool allows users to select the databases to be searched and displayed on the map.

Database Selection Tool

This tool shows how many entries in the selected databases are available for a particular country.

Entries Display Tool

This tool allows users to change the map view by zooming in or out.

Zoom Tool

This tool is only available once users have zoomed in on the map. It allows users to move the map in the zoomed in view. Users can also move the map using the grey arrows on the sides of the map.

Move Tool

This tool allows users to return to the main page (world view) of the Interactive Geographical Search feature.

DIVISION OF ETHICS OF SCIENCE & TECHNOLOGY

The Division of Ethics of Science and Technology embodies the priority UNESCO gives to the promotion of ethics of science and technology, with emphasis on bioethics.

The Division's actions include providing support for Member States of UNESCO that are planning to develop activities in the field of ethics of science and technology.

The Division also functions as the executive secretariat for three international ethics bodies, namely the World Commission on the Ethics of Scientific Knowledge and Technology (COMEST), the International Bioethics Committee (IBC) and the Intergovernmental Bioethics Committee (IGBC).
