Preface

Today (late 1990s) well over half of the world's population lives in coastal areas and, by the end of the new millennium's first decade, an estimated 70-80% will live in close proximity to the sea. Billions of people, poor and rich alike, depend on local coastal fishing for the major part of their animal food protein, and there are similar dependencies on other coastal resources for sustenance, development and recreation. The majority of the world's megacities are coastal, adding to the urgent need for strategies to achieve sustainable development. These regions are also crossroads for peoples of many origins and persuasions, this providing a particularly complex mosaic of cultural groups.

Addressing the variety of problems facing coastal regions and small islands requires transdisciplinary research and the careful formulation of policies for integrated action towards improved management of resources in the coastal belt. The UNESCO endeavour, 'Environment and Development in Coastal Regions and in Small Islands' (CSI), was launched in 1996 in response to the situation. It provides a platform for cross-sectoral co-operation amongst the Organization's different programmes in Member States and with concerned institutions and other partners around the world.

In 1996, as one of its first activities, CSI initiated and coordinated an inventory of published works, accomplished through UNESCO's activities, that contribute to broadening our understanding of coastal region and small island problems and possible solutions. The present volume is the result of this inventory. It is intended to serve as an aid to researchers, resource managers, teachers, decision-makers and other stakeholders.

About this list

This document contains titles of materials which are either (i) published by UNESCO or (ii) a direct result of one or more of its programmes. The common denominator is that all listed materials (books, journals, articles, promotional materials and electronic media) deal with subjects pertinent to coastal regions and small islands.

The list is arranged by the units responsible for or associated with the titles, and the citations are the responsibility of these units. Language versions are indicated as follows: Arabic (Ar), Chinese (Ch), English (E), French (F), Russian (R), Spanish (S).

Many titles can be consulted in libraries and documentation or depository centres, and in some cases extra copies may be available. At the beginning of each section or subsection, the source or contact for further information concerning those titles is indicated. At the end of the document is a list of the full names, addresses etc. of the contacts.

IMS Newsletter

(Contact: CSI)

For about 25 years, the *International Marine Science (IMS) Newsletter* was published quarterly in the six UN languages, and reported on international activities, especially those of UNESCO and its IOC. Many articles concerned the coastal zone. In particular, No. 69/70 (1994) featured a section highlighting UNESCO's activities relevant to small island states.
