**General Assembly  
Sixty-first session**

Item 55 (a) of the preliminary list\*

**Groups of countries in special situations:**

**Third United Nations Conference on the Least  
Developed Countries**

**Economic and Social Council  
Substantive session of 2006**

Geneva, 3 July-28 July 2006

Item 6 (b) of the provisional agenda\*\*

**Implementation of and follow-up to major  
United Nations conferences and summits:  
review and coordination of the  
implementation of the Programme of  
Action for the Least Developed Countries  
for the Decade 2001-2010**

## **Implementation of the Programme of Action for the Least Developed Countries for the Decade 2001-2010**

### **Report of the Secretary-General**

#### *Summary*

The fourth annual progress report shows that despite improved economic performance, extreme poverty appears to be decreasing in very few of the least developed countries (LDCs) and increasing in many. In unprecedented reversal of historical trends, life expectancy is declining in several LDCs, most affected by HIV/AIDS and civil strife. Other social indicators, including gender equality, are improving owing to the donor direct support to the social sectors but remain the lowest in the world. The report concludes that very few LDCs can meet goals and targets of the Brussels Programme of Action, if current trends persist.

The report shows that fast population growth, rapid urbanization, environmental degradation and HIV/AIDS aggravate extreme poverty in LDCs. Climate change is emerging as a new challenge to sustainable development of the LDCs, in particular those in Africa and the small islands.

---

\* A/61/50 and Corr.1.

\*\* E/2006/100.

The report calls for continued commitment and renewed energy of LDCs and their development partners to the implementation of the Programme of Action. It recommends that LDCs integrate the objectives, goals and targets of the Programme of Action into their Millennium Development Goals-based national development strategies and calls on their development partners to support those strategies through the common country assessment/United Nations Development Assistance Fund and poverty reduction strategy papers processes. Those integrated investment and operational frameworks must be underpinned by a bottom-up and needs-based assessment and supported by a number of “quick-win” interventions.

The report emphasizes that keeping promises on aid, debt relief, market access and technical assistance is crucial for breaking the poverty trap of LDCs and for maintaining the credibility of the Programme of Action designed as a framework of partnership between LDCs and their development partners.

## Annexes

I. Programme of Action for the Least Developed Countries for the Decade 2001-2010: goals and targets . . . . .	21
II. Statistical data specific to individual countries. . . . .	1

## I. Introduction

1. The present report is submitted in accordance with General Assembly resolution 59/244 of 22 December 2004 and resolution 2005/44 of 27 July 2005 of the Economic and Social Council, in which the Secretary-General was requested to submit an annual progress report on the implementation of the Programme of Action of the Least Developed Countries for the Decade 2001-2010,<sup>1</sup> adopted at the Third United Nations Conference on the Least Developed Countries in Brussels in May 2001, in an analytical and results-oriented way by placing emphasis on concrete results and indicating the progress achieved in its implementation.

2. The present report follows the structure of the Brussels Programme of Action and reviews progress in its implementation by its contribution to progress of least developed countries (LDCs) towards achieving international development targets, as stipulated in the Programme of Action.

3. The list of indicators used for measuring progress of LDCs and their development partners on the international development goals and targets contained in the Brussels Programme of Action is provided in annex I to the report.

4. While the report makes an assessment of performance of the LDCs group as a whole, there are inevitable and sometimes wide variations in performance among individual countries. The performance of individual LDCs is reflected in annex II to the report, which provides country-specific statistical data. Those data have been compiled from international sources which, in turn, are based on national sources. Full citations to the sources are provided at the bottom of each table.

5. The Brussels Programme of Action requires that the assessment includes measuring progress in graduation from the list of LDCs. Graduation from LDC status falls under the purview of the Committee for Development Policy, a subsidiary body of the Economic and Social Council, which comprises independent experts who review the list of LDCs every three years and make recommendations for inclusion in, or graduation from, the list of LDCs.

6. In 2004, the General Assembly took note of the recommendation of the Committee for Development Policy to graduate two LDCs.<sup>2</sup> Cape Verde is currently in the transition to graduation in 2007, while the commencement of the three-year smooth transition period for the graduation of Maldives, severely hit by a tsunami in December 2004, has been deferred for three years until 1 January 2008.<sup>3</sup> In the 2006 triennial review, the Committee recommended that Papua New Guinea be included<sup>4</sup> and that Samoa be graduated from the list of LDCs. The Committee also found that Equatorial Guinea, Kiribati, Tuvalu and Vanuatu were eligible for graduation. In accordance with the established procedures, they will be considered for graduation at the next triennial review. A further seven LDCs were found to meet one of the three graduation criteria. The 2006 review concluded, however, that 36 LDCs failed to meet any of the criteria for graduation, a reflection of their slow progress in development.<sup>5</sup>

## II. Implementation of the Brussels Programme of Action

### Commitment 1

#### Fostering a people-centred policy framework

7. Accelerated, sustained and inclusive growth is indispensable for poverty reduction and sustainable growth in the LDCs. To achieve the objective of halving the proportion of people living in poverty and hunger by 2015, the Brussels Programme of Action set the goals of reaching a minimum 7 per cent per annum growth of gross domestic product (GDP) and a minimum 25 per cent ratio of investment to GDP for LDCs by 2010.

8. During the period 2001-2004, the average annual growth rate of the real (constant price) GDP of the LDCs was 5.5 per cent, compared to 4.4 per cent in the period 1996-2000 and 2.2 per cent in the period 1991-1995. Faster growth was fuelled in many LDCs by increased demand and prices for commodities and was mainly concentrated in the mining and oil sectors. Despite the overall improvement, only five countries met the target of annual growth rate of 7 per cent since the adoption of the Programme of Action, including three countries that benefited from oil sector development and one that experienced a strong post-conflict, aid-driven recovery after a long period of negative growth. A further 15 LDCs achieved average growth of over 5 per cent during the period 2001-2004, but in six countries GDP has fallen since 2000. Annual real per capita GDP in LDCs grew much slower than total GDP owing to fast population growth. It increased only from US\$ 288 in 1990 to \$339 in 2003.

9. Data for 2003-2004 indicate that 14 LDCs have already met the investment target and that the investment ratio is 20 per cent or above in a further 11 countries. In 11 LDCs the investment rate remains below 15 per cent, however (see annex II, table 1).

10. Economic growth in the LDCs does not appear to have led to meaningful reductions in poverty. In 9 of the 17 LDCs for which recent international comparable data are available, over 50 per cent of the population subsists on less than \$1 purchasing power parity (PPP) per day. Trend data relating to this benchmark are available for only 12 LDCs. Three of those countries (Burkina Faso, Ethiopia, and Mauritania) have achieved a significant reduction in poverty since the first half of the 1990s, but eight others have experienced increases in poverty. Poverty has remained unchanged but very high in the remaining country (see annex II, table 2).

11. Some progress has been achieved in most LDCs in reducing the proportion of people suffering from hunger, but rates of undernourishment remain high and are above 41 per cent or higher in 10 LDCs. Most LDCs seem unlikely to meet the Millennium Development Goals target of halving, by 2015, the proportion of people who suffer from hunger (ibid.).

12. Civil conflict, extreme poverty, inadequate nutrition and HIV/AIDS combined have produced the unprecedented result of a decline in life expectancy since 1990 in one fifth of the LDCs, all of which are in Africa. Life expectancy in all LDCs in other regions increased between 1990-1995 and 2000-2005, in some cases significantly but remains below 50 years (ibid.). Nonetheless, owing to a very high fertility rate, the population of the LDCs has increased from 522 million people in

1990 to 741 million people in 2004 and to an estimated 759 million in 2005 (see annex II, table 1).

13. Originally designed as debt-relief tools, poverty reduction strategy papers (PRSPs) have been increasingly seen as the main operational and investment framework and the primary strategic vehicle for countries to tackle poverty and hunger and to reach the international development goals, including those contained in the Millennium Declaration. As of 28 February 2006, two thirds of all LDCs had prepared PRSPs, with Benin and Uganda having prepared the drafts of their second. Several other LDCs had prepared one or more progress reports on the implementation of their PRSPs.

14. At the 2005 World Summit, world leaders reaffirmed the Millennium Declaration and resolved to “adopt, by 2006, and implement national development strategies to achieve the internationally agreed development goals and objectives, including the Millennium Development Goals”.<sup>6</sup> The United Nations Development Group Action Plan (2006-2008) is aimed at assisting 60 developing countries, including the LDCs, to prepare or modify national development strategies based on the Millennium Development Goals. Some LDCs are already preparing PRSPs based on the Millennium Development Goals, while others are modifying their PRSPs in order to achieve the Goals.

## **Commitment 2**

### **Good governance at the national and international levels**

15. Peace and security are necessary to achieve poverty reduction and sustainable development. Conflicts take a heavy toll on human lives and have a devastating impact on the economy and development efforts. Studies show that the incidence of conflicts in low-income countries is higher than in middle-income countries and much higher than in high-income countries, making LDCs particularly prone to conflict. While worldwide the number of conflicts has decreased dramatically since 1990, half of the conflicts in the last 15 years erupted in the LDCs.<sup>7</sup>

16. The Brussels Programme of Action calls upon the LDCs to pursue national policies and strategies to promote confidence-building and conflict prevention and, in countries affected by war, to promote peaceful settlements of disputes, reconciliation and post-conflict peacebuilding.

17. The Comprehensive Peace Agreement, signed in Nairobi on 9 January 2005 between the Government of the Republic of the Sudan and the Sudan People’s Liberation Army, has raised the prospects for national reconciliation, the restoration of law and order, the return of refugees and displaced persons, and, ultimately, restoration of development in the country. More than a year later, however, the security situation in the Sudan remains precarious and its tensions with neighbouring Chad threaten peace and stability in the region.

18. Tensions between Eritrea and Ethiopia have grown as a result of unresolved issues, in particular the stalemate in the demarcation process under the 2002 decision of the Eritrea-Ethiopia Boundary Commission.

19. Elsewhere, there have been some positive developments: the return of the transitional federal government to Somalia; national elections in Burundi; a return to peace in the Central African Republic; the constitutional referendum in the

Democratic Republic of the Congo (DRC) that paved the way to national and provincial elections; presidential and parliamentary elections in Haiti; and presidential elections in Liberia which led to the election of the first female African Head of State.

20. Women gained 27 per cent in the Upper House and 22 per cent in the Lower House of the Parliament of Afghanistan. In provincial councils, Afghan women have secured 29 per cent of membership. As part of its commitment to the Bonn process, Afghanistan adopted a five-year National Drug Control Strategy and developed the National Development Strategy aimed at poverty reduction, employment generation, improvement of social services, infrastructure, agriculture and rural development and private sector development. Its “Justice for All” reform is aimed at establishing a fair and transparent justice system, including the reconstruction and reform of the correctional system and strengthening the rule of law.

21. Post-conflict LDCs face enormous challenges in their transition to peace and can relapse into conflict within five years if they do not receive timely and adequate aid and policy advice.<sup>8</sup> Ironically, aid to post-conflict countries tends to decrease precisely when it could become effective for building the foundations for long-term development. At the same time, post-conflict countries often have difficulty in absorbing large amounts of development aid and demonstrating strong governance performance often required to qualify for external development assistance.<sup>9</sup>

### **Commitment 3**

#### **Building human and institutional capacities**

22. Direct donor support to the social sector has resulted in positive changes on several social indicators of LDCs. Thus, most of LDCs for which data are available are making progress towards universal primary enrolment and most LDCs improved gender equality in primary education. Gender disparities increase with the level of education, however; data for 21 LDCs show high gender disparity in secondary education, with girls exceeding boys in six countries. There is even higher disparity in tertiary education, with girls’ enrolment being less than half that of boys in more than 50 per cent of the countries (see annex II, table 4.A).

23. Data on adult literacy in the LDCs is sparse, but the target of 50 per cent adult literacy improvement by 2015 has been met or is likely to be met for women in 26 of 33 LDCs with data. For men, the target has been, or is likely to be, met in only 10 of 32 LDCs with trend data (see annex II, table 4.B).

24. Very high infant and under-five child mortality persist in one third of the LDCs as a result of severe malnutrition, diseases, including HIV/AIDS, and conflicts. According to the United Nations Children’s Fund (UNICEF), 11 out of 20 countries with the highest under-five mortality rates in the world have experienced major armed conflict since 1990. All those 11 countries are LDCs.

25. Four LDCs (Cape Verde, Samoa, Solomon Islands and Vanuatu) have already met the goal of reducing the infant mortality rate below 35 per 1,000 live births and a further 13 are making substantial progress to meeting that goal by the target date of 2015. A further 18 LDCs are making some progress in that direction but there is minimal progress or reversals in the 15 remaining LDCs (see annex II, table 3).

26. Three LDCs (Cape Verde, Samoa and Vanuatu) have already met the target of reducing the under-five mortality rate below 45 per 1,000 live births and a further 13 are making substantial progress towards that target. Twenty other LDCs are making progress but seem unlikely to meet the target by 2015 while the remaining 14 LDCs are lagging even further behind (ibid.).

27. Maternal mortality in the LDCs remains the highest (890 deaths per 100,000 live births) in the world and is very high or high in 45 of these countries. Despite the magnitude of the problem and the fact that solutions are available, only five LDCs (Cape Verde, Maldives, Samoa, Solomon Islands and Vanuatu) are close to achieving the target of reducing maternal mortality by three quarters by 2015.

28. Insufficient care during pregnancy and delivery is largely responsible for maternal and child mortality. Ironically, the LDCs with the highest fertility rates (just under 5 children per woman) have the lowest rates of skilled care at delivery. Only about one third of all deliveries in the LDCs are attended by skilled personnel, compared to 59 per cent in other developing countries. Seven LDCs have a skilled attendance rate of over 85 per cent and a further 17 LDCs have skilled attendance rates of over 50 per cent and may be able to meet the target of universal coverage by 2015. A significant breakthrough is needed, however, to reach that goal in the remaining 26 countries (ibid.).

29. Some improvement has been achieved in antenatal care coverage. Among 45 LDCs for which data are available, 35 should be able to meet the target of universal antenatal care by skilled health personnel. Rapid expansion of service delivery is needed to make significant progress towards the goal in the remaining countries (ibid.).

30. Policies aimed at reducing population growth have resulted in progress in the use of contraceptives in 21 of the 25 LDCs with trend data, although rates remain low in many cases. HIV/AIDS prevention policies, including information/education campaigns, have also contributed to increased condom use.

31. Data suggest that, although the rate of new HIV/AIDS cases (3.2 per cent) in the most affected LDCs remains the highest in the world, it has begun to decline slightly as a result of HIV/AIDS prevention policies and programmes over the past 10 years. With the expansion of HIV/AIDS programmes, deaths are also declining so that the prevalence rate may stabilize or even decrease in the future. Significant investments in HIV/AIDS prevention and treatment are needed, however, to consolidate this emerging trend (see annex II, table 6).

32. The prevalence of tuberculosis (TB) and TB-related death rates has declined substantially in some LDCs but has remained high, and even increased, in the majority of countries. Much of the increase is the result of HIV/AIDS infection which weakens the human immune system (see annex II, table 7).

33. There has been a reduction in malaria prevalence in 15 LDCs but deterioration in 13 among 30 LDCs with trend data. Deaths from malaria occur mainly in Central Africa and in Myanmar, with very high (2,000 and over) deaths in 10 LDCs and a high number (500-1,999) of deaths in 9 among 33 LDCs with data during the period 2000-2003. Twenty-three out of 30 LDCs for which data are available are now able to treat at least 25 per cent of children with fever with anti-malarial drugs. Progress in the use of insecticide-treated nets has been slow but they have been successfully introduced in 11 LDCs (ibid.). Remarkably, Tanzania has started production of the

bed nets, causing the price to drop from \$15 to \$2 per net and their use of ITNs in some districts to increase from 2 to 25 per cent.<sup>10</sup>

34. Data suggest significant improvement in access to potable water: 58 per cent of the population in LDCs has access to improved water. Disparities remain, however, between rural and urban areas. In urban areas, 45 LDCs have already met, or seem likely to meet, the target for access to improved water by 2015, but little progress has been observed in the remaining 5 countries. In contrast, there has been almost no change in the extent of access to improved water in rural areas (see annex II, table 8).

35. Some improvement has been achieved in the access to improved sanitation. Twenty-one LDCs seem likely to achieve the sanitation target in urban areas and 16 LDCs in rural areas but there has been little progress in the remainder (*ibid.*).

36. Because of extreme poverty, rapid population and urbanization growth, poor housing and urban policies, the number of people living in slum conditions in the LDCs is increasing by almost 5 per cent annually; more than double the rate in other developing countries. Nearly 140 million people in LDCs or a quarter of their urban population live in poor housing conditions.

37. Despite some improvements, social indicators of LDCs remain the lowest in the world. These countries have the highest infant, child and maternal mortality rate, the highest HIV/AIDS, TB and malaria incidence and prevalence rates, the lowest school enrolment and adult literacy rates, the highest fertility and population growth rates, the highest undernourishment and extreme poverty rates, the shortest life expectancy at birth and the poorest housing conditions.

#### **Commitment 4**

#### **Building productive capacities to make globalization work for the least developed countries**

38. The Brussels Programme of Action emphasizes that the capacity of LDCs to accelerate growth and sustainable development is impeded by their structural and supply-side constraints, including low productivity. Among the critical factors required to enhance productive capacity, it mentions stable macroeconomic conditions, a conducive legal and regulatory framework, adequate institutional, physical and social infrastructure and a vibrant private sector.

39. Some 72 per cent of the population of the LDCs lives in rural areas and 69 per cent of the population depends on agriculture for their employment, income and food security. This concentration in rural areas makes agriculture and rural development ideal targets for poverty reduction in the LDCs.

40. Despite the importance of agriculture for their economies, the LDCs have moved from being net agricultural exporters to net agricultural importers as the share of agricultural exports has declined and agricultural imports, mostly food, have almost tripled in their total imports. Price spikes and drought have increased food insecurity in food-importing LDCs and make them spend a large proportion of their foreign exchange earnings on the purchase of food. Large expenditures on imports of food reduce the ability of the LDCs to pay for other essential imports and may raise their external debt. Furthermore, they may undermine their long-term

development by diverting resources from investment in the diversification of agriculture and in rural development and from social sectors.

41. The share of processed products in the agricultural exports of the LDCs has increased slightly but lack of access to agricultural technology, weak human and institutional capacity and lack of access to credit and market information hamper further agricultural diversification and undermine the competitiveness of the LDCs in international markets for agricultural products. Official development assistance (ODA) to agriculture in the LDCs has been falling in relative terms and the private sector has not filled the gap; foreign direct investment in agriculture is almost non-existent. The situation is exacerbated by the highly volatile international markets for agricultural products and by the agricultural subsidies of the developed countries.<sup>11</sup>

42. The Programme of Action underscores that reliable physical infrastructure “is essential for efficient operation of existing productive assets and enterprises, attracting new investment, and assuring meaningful economic development” of the LDCs. To that end, it recommended that road and railway connections in LDCs should be increased to the level of other developing countries by 2010.

43. Data from 32 LDCs suggest that road length has been increased by at least 20 per cent since 1990 in 13 countries, but that there was a decline in road length in 6 countries in that period. At the same time, the proportion of roads that are paved remains very low. Railways are also limited in relation to the population and geographical size of almost all LDCs; only 4 LDCs (Democratic Republic of the Congo, Mozambique, the Sudan and United Republic of Tanzania) report the extensive use of railways for freight (see annex II, table 10).

44. The Programme of Action also recommends modernizing and expanding ports and airports and their ancillary facilities by 2010 to enhance the trading capacities of the LDCs. It is not possible to assess progress on port facilities and their use in the LDCs owing to the lack of standardized indicators. Air service is very limited in most LDCs and both air freight and aircraft departures are declining (ibid.).

45. In 2003-2004, only four LDCs had met or were expected to meet the target of five telephone lines per 1,000 inhabitants by 2010; very few of the remaining LDCs were expected to meet that target, despite the progress achieved since 1990. Taking main lines and cellular subscribers together, in all but two LDCs with data, access per 100 population has at least doubled and, in many, increased by three to fivefold from 2000 to 2004. Eight LDCs had 10 or more lines per 100 population in 2003-2004 and 10 more LDCs are in a position to reach that level soon. Acceleration in 17 other LDCs can put them on track to the target but the prospects for the remaining 14 countries are less promising, despite strong growth in the number of cellular subscribers (see annex II, table 9).

46. In 2000, there were only seven LDCs with one or more Internet connections per 100 population. Since then, the number of Internet users has grown by 3 to 10 times or more in most LDCs although Internet users are still below 1 per 100 in half the LDCs (ibid.).

47. Post offices, especially in rural areas, play an important role in LDCs where they are used not only for post but also financial services (payment of public utilities bills, taxes and money transfers, etc.) and provide access to information. Efficient and affordable financial services and international money transfers provided by post offices can stimulate social and economic development and

contribute to poverty reduction in LDCs. However, data show that, in all but 8 of 47 LDCs for which data are available, access to postal services has been steadily declining since 1990 (ibid.).

## **Commitment 5**

### **Enhancing the role of trade in development**

48. Despite the importance of trade for growth and sustainable development, the share of the LDCs in world trade remained marginal in 2004: less than 0.7 per cent, including oil exports but only slightly above 0.3 per cent if oil exports are excluded. The value of the exports of oil-exporting LDCs grew by over 50 per cent in 2004, far more rapidly than that of manufacture- and mineral-exporting LDCs. Although LDCs accounted only for 0.4 per cent of world exports of services in 2004, trade in services accounted for more than half of total export earnings in such countries as Ethiopia, Maldives, Myanmar, Nepal, Senegal and the United Republic of Tanzania.

49. The United States of America and the European Union remain the major export markets for the LDCs, but 38 per cent of LDC exports in 2004 were absorbed by developing countries. China alone accounted for 18 per cent of all LDC exports. At the 2005 World Summit, China announced that it would grant duty-free access to certain products from the 39 LDCs with which it has diplomatic relations. Similarly, at the sixth World Trade Organization (WTO) Ministerial Conference held in Hong Kong, China, in December 2005, Brazil and India also announced duty- and quota-free market access for products from LDCs.

50. A further important step was the establishment by the sixth WTO Ministerial Conference of a date of 2008 or no later than the implementation period for the start of duty-free and quota-free market access for all LDC exports, although it was agreed that the target would be only 97 per cent of products of LDCs for those developed countries which are not in a position to do so. Considerable effort and strong political will, will be needed, however, to achieve the WTO goals by the agreed date since duty-free market access for products originating in LDCs has increased by only 2 percentage points from 1996 to 2004.

51. Within the total, the average tariffs of developed countries on imports of agricultural goods, clothing and textiles from LDCs have declined consistently since 1996, reaching 3.4 per cent, 2.5 per cent and 1.5 per cent, respectively, in 2004.<sup>12</sup> Recognizing that tariff and non-tariff barriers, notably rules of origin and product standards, are serious obstacles to market entry for LDCs, the sixth WTO Ministerial Conference called on developed countries “to ensure that preferential rules of origin applicable to imports from LDCs are transparent and simple and contribute to facilitating market access”.<sup>13</sup>

52. Supply-side constraints, such as poor transportation systems, particularly roads and ports, inefficient customs procedures, weak quality control and regulatory systems, and a lack of trade facilitation and export promotion, often impede the ability of LDCs to benefit fully from preferences. Improving supply capacities has been one of the major objectives of the Integrated Framework for Trade-Related Technical Assistance to LDCs launched by the World Bank, the International Monetary Fund, WTO, the International Trade Centre, UNCTAD and UNDP in 1997.<sup>14</sup>

53. As of 30 September 2005, 40 LDCs were at various stages of the Integrated Framework. Cumulative pledges to the Integrated Framework have reached \$34.6 million, and 94.8 per cent of those pledges have been translated into contributions to the Integrated Framework Trust Fund. For the first time, pledges and contributions for capacity-building projects (Window II) have surpassed contributions for the financing of the Diagnostic Trade Integration Studies (Window I).

54. At its 2005 WTO Conference the Ministers resolved “to make the Integrated Framework more effective and timely in addressing the trade-related development needs of LDCs” and requested a Task Force of donors and LDCs to provide, by April 2006, recommendations to the General Council on how to: (a) provide increased, predictable, and additional funding on a multi-year basis; (b) strengthen the Integrated Framework at the country level, including through mainstreaming trade into national development plans and poverty reduction strategies; and (c) improve the Integrated Framework decision-making and management structure to ensure the effective and timely delivery of the increased financial resources and programmes.

55. The Ministers further decided that the enhanced Integrated Framework should enter into force no later than 31 December 2006, and urged development partners to significantly increase their contributions to the Integrated Framework Trust Fund. It was also recognized that the broader Aid for Trade programme should assist developing countries, particularly the LDCs, to address supply-side constraints and trade-related infrastructure needs and to expand their trade.

56. Total official development assistance (ODA) commitments of the Development Assistance Committee of the Organization for Economic Cooperation and Development (DAC/OECD) to trade capacity-building in LDCs grew from \$1.4 billion in 2002 to \$2.2 billion in 2003 and \$2.3 billion in 2004. LDCs are the primary beneficiaries of the trade-related technical assistance and capacity-building activities of the United Nations system organizations and agencies, notably UNCTAD. In particular, LDCs continue to benefit from such UNCTAD projects and programmes as the Automated System for Customs Data, a computerized customs management system,<sup>15</sup> the Advanced Cargo Information System, UNCTAD/International Chamber of Commerce Investment Guides, Investment Policy Reviews and Good Governance in Investment Promotion, commodity-related projects, Joint Integrated Technical Assistance Programme to Selected Least Developed and other African Countries,<sup>16</sup> and technical assistance activities related to trade negotiations and commercial diplomacy.

57. Preferential trade is crucial for commodity-dependent LDCs. According to an UNCTAD study, however, nearly half of all exports of goods from LDCs under market access preferences originated in only 11 countries and related to only 17 product categories in 2003. At the same time, nearly 20 primary commodities of importance to LDCs (accounting for 59.5 per cent of their total exports of goods and services) are exported to markets in the European Union, Japan and the United States of America without enjoying preferential treatment, as those products are exported on a most favoured nation (MFN) duty-free basis or are subject to a very low MFN tariff. About 18 products, from fresh fish to automobile parts, have been exported by LDCs under significant preferential margins to the same markets.<sup>17</sup>

58. The Trade and Development Board of UNCTAD recently acknowledged that some LDCs “could be affected by the erosion of preferences involving certain

products of export interest to them". The Board called for "intensified international support measures to enable LDCs to enhance their productive capacities, diversify their economies into non-preference-dependent activities, and improve their utilization of market access preferences made available to them". It concluded that "such international support measures could also aim at addressing any adverse effects of further multilateral trade liberalization on LDCs".

59. Despite the adoption by its General Council of accession proceedings in 2002, accession to WTO remains a long and cumbersome process. Some 32 LDCs are currently members of WTO but only 2 have joined it since the adoption of the Brussels Programme of Action in 2001. Ten LDCs remain at various stages of accession. Six WTO-aspiring LDCs have been assisted by UNCTAD and have benefited from technical cooperation and various capacity-building activities tailored to their specific economic conditions and needs.

## **Commitment 6**

### **Reducing vulnerability and protecting the environment**

60. Many LDCs are encountering so-called forced environmental degradation, a situation in which "inadequate man-made capital stock, stagnant technology, lack of employment opportunities and the inability to cater for basic human needs, combined with a growing population, force the economy into a state where survival necessitates eating into natural or environmental stock".<sup>18</sup> Land degradation (desertification), deforestation and loss of biological diversity associated with "forced environmental degradation", in turn, further exacerbate extreme poverty in LDCs.

61. Forests occupy less than 4 billion hectares, or 30 per cent of total land area in the world, but deforestation, mainly the conversion of forests to agricultural land, reduced that coverage by 13 million hectares per year between 1990 and 2005.<sup>19</sup> Almost 50 per cent of the world's loss of forests during that period took place in LDCs, with nearly every LDC encountering at least some unsustainable forest loss. Extremely high levels of deforestation are observed in the Comoros (58 per cent), Burundi (47 per cent), Togo (44 per cent) and Afghanistan (34 per cent).

62. Although LDCs are not responsible for substantial release of greenhouse gases, they are heavily exposed to such adverse consequences of global warming and climate change as drought, sea level rise, floods and monsoon-like rains, air and water pollution, loss of biological diversity and damage to ecosystems.

63. Recurrent droughts and severe land degradation have reduced agricultural production and increased food insecurity in many LDCs in sub-Saharan Africa. According to estimates of the World Food Programme (WFP), almost 3.5 million people in Southern Africa were in need of emergency food aid in 2005. Drought increased that number to 8.3 million people, including 1.6 million in Malawi, 1.2 million in Zambia and 900,000 in Mozambique. Almost 11 million people were in need of food in the Horn of Africa, including in Ethiopia, Eritrea and Somalia.

64. Changes in farming systems, the introduction of crops resistant to high temperature, additional inputs, such as fertilizers and increased irrigation, could mitigate the adverse impact of climate change and increase agricultural productivity.

Fertilizers are expensive and agriculture is mainly rain-fed in Africa, however, where only 4 per cent of all agricultural land is under irrigation.<sup>20</sup>

65. The adverse impact of climate change is exacerbated by the lack of adapting strategies and of the institutional, economic and financial capacity of LDCs to support such actions. In accordance with the United Nations Framework Convention on Climate Change, the seventh Conference of the Parties held in 2001 in Marrakech, Morocco, has established the LDCs Fund, in order to assist LDCs in adapting to the impact of the climate change. Under the arrangement, each LDC is provided with \$200,000 for its National Adaptation Programme of Action. As of April 2005, contributions to the LDCs Fund amounted to around \$33 million, of which \$12 million was meant for the preparation of the programmes of action and \$21 million for their implementation.<sup>21</sup> As of March 2005, three LDCs had completed national adaptation programmes of action, 17 LDCs were preparing them and projects for their preparation had been approved for 20 more LDCs.

66. For small island LDCs, in particular low-lying island states like Kiribati, the Maldives and Tuvalu, the sea level rise that is expected as a result of climate change will give rise to a loss of beaches, salination of soil and freshwater, increased stress on coastal ecosystems and damage to infrastructure. Higher sea levels can disrupt economic and social development, destroy human livelihoods, cause the displacement of settlements and jeopardize the very existence of small island developing States.

## **Commitment 7**

### **Mobilizing financial resources**

67. The Brussels Programme of Action emphasizes that ODA will remain a critical resource for achieving its objectives, goals and targets. It recommends improving aid volumes and aid effectiveness and increasing national ownership through better integration of external aid into macroeconomic and sectoral programmes.

68. Total ODA to LDCs from the developed countries reached \$23.5 billion in 2004, an increase of 11 per cent over 2003. The largest donors were Belgium, France, Germany, Italy, Japan, the United Kingdom of Great Britain and Northern Ireland and the United States. ODA as a share of the gross national income (GNI) of DAC/OECD countries remained at the 2003 level of 0.08 per cent, but for the European Union countries it decreased from 0.13 per cent in 2003 to 0.12 per cent in 2004. Out of 22 donors, seven (Denmark, Ireland, Luxembourg, Netherlands, Norway, Portugal and Sweden) have met the 0.20 per cent target for ODA to LDCs as a share of their GNI and three (Belgium, France, United Kingdom) are expected to meet it in 2010 (see annex II, table 11).

69. The top recipients of ODA from the developed countries in 2004 were Afghanistan and Bangladesh in Asia and the Pacific and Angola, the Democratic Republic of the Congo, Ethiopia, Madagascar, Mozambique, Senegal, the United Republic of Tanzania, Uganda and Zambia in Africa.

70. The main uses of developed countries' bilateral ODA flows to the LDCs were social infrastructure and services, debt relief and emergency assistance. Almost 90 per cent of ODA to LDCs was provided as grants and 91 per cent complied with the 2001 DAC Recommendation on Untying Official Development Assistance to the

Least Developed Countries. The recent OECD/DAC decision on untying the remaining aid would imply an additional \$440 million in small (up to \$1 million) projects in LDCs.<sup>22</sup>

71. The Brussels Programme of Action emphasizes that the “external debt overhang in the majority of LDCs constitutes a serious obstacle to their development efforts and economic growth”. It recommends a number of policies and measures to address that problem, including the “full, speedy and effective implementation of the enhanced Heavily Indebted Poor Countries (HIPC) Initiative”.

72. As of August 2005, 13 LDCs had reached the completion point under the HIPC Initiative and 9 more were “floating”, pending agreement on arrangements for the delivery of HIPC debt relief (see annex I, table 12). On 6 January 2006, it was agreed that 12 of the 13 LDCs which had reached the decision point and Cambodia, a non-HIPC LDC, qualified for and will receive, through IDA, starting from 1 July 2006, 100 per cent debt relief under the Multilateral Debt Relief Initiative of the IMF, the World Bank and the African Development Bank. On 23 April 2006, nine additional LDCs (six of those “ring-fenced” at the end of 2004 and three new) were recommended for debt relief under the enhanced HIPC Initiative.<sup>23</sup>

73. Notwithstanding those achievements, implementation of the HIPC Initiative has been slow. Of \$11.1 billion committed by IMF and the World Bank to the LDCs for the HIPC Initiative, only \$1.4 billion had been delivered by August 2005.

74. The Brussels Programme of Action emphasizes “a complementary and catalytic role” of foreign direct investment and other private external flows for export growth, technology and skills transfer, employment and poverty eradication in the LDCs. Data suggest that net foreign direct investment in the LDCs increased sharply between 1990 and 2004, with inflows in 2004 exceeding 5 per cent of GDP in eight countries (Angola, Chad, Ethiopia, the Gambia, Lesotho, Mauritania, the Sudan and Zambia), of which three are oil-exporting countries, compared to only two countries (Liberia and Zambia) in 1990. The number of countries with outflows or net inflows of less than 1 per cent of GDP dropped from 25 to 11 (annex II, see table 1).

75. Migrant workers’ remittances constitute a significant share of GDP in Lesotho (25.8 per cent), Haiti (24.8 per cent), Samoa (12.4 per cent), Nepal (11.7 per cent), Kiribati (11.3 per cent) and Yemen (10 per cent). In absolute terms, Bangladesh, with \$3.4 billion, ranks fourteenth among the world’s remittance-receiving countries. The Ministerial Conference of the Least Developed Countries on Enhancing the Development Impact of Remittances, held on 9 and 10 February 2006 in Cotonou and organized by the Government of Benin, with the support of the United Nations Office of the High Representative for the Least Developed Countries, Landlocked Developing Countries and Small Island Developing States (UN-OHRLLS) and the International Organization of Migration (IOM), recognized the private nature of remittances, underscored their positive impact on poverty eradication at the household, community and national levels and adopted a set of recommendations on enhancing their development impact in LDCs.

### III. Conclusions and recommendations

76. Despite improved economic performance, extreme poverty appears to be decreasing in very few LDCs and increasing in many. In an unprecedented reversal of historical trends, life expectancy is declining in several LDCs in Africa, most affected by HIV/AIDS and civil strife. Other social indicators, including gender equality, are improving in many LDCs, in a large degree, owing to donor direct support to the social sectors. Nonetheless, very few LDCs will be able to meet the objectives, goals and targets of the Brussels Programme of Action, if current trends persist.

77. Development and poverty reduction in the LDCs are constrained by many factors: the structural weaknesses of their economies; their limited human, institutional, technical, trade and productive capacity; inadequate infrastructure, limited capability to mobilize domestic and attract external resources; unsustainable external debt; high vulnerability to external economic shocks; natural disasters; and the prevalence of communicable and non-communicable diseases, including HIV/AIDS, malaria and tuberculosis. High population growth, rapid urbanization and environmental degradation aggravate extreme poverty in the LDCs. Climate change is emerging as a new challenge for sustainable development in the LDCs, in particular those in Africa and the small islands.

**78. The Governments of post-conflict LDCs should demonstrate a continuous commitment to the peace process, ensure public law and order, develop an independent judicial system, guarantee respect for human rights and fundamental freedoms, ensure voice and participation of the poor in decision-making, provide transparency and accountability in public administration, procurement and budget management, including the equitable management of natural resources revenues, and ensure equal access to basic social services. They should also reduce military spending, which is usually not only ineffective in deterring insurgencies but also increases the risk of conflicts. Since conflicts are often prompted by social exclusion, it is important to involve women, civil society and the private sector in the post-conflict recovery. Donors should make long-term commitments to the recovery of post-conflict LDCs.**

**79. Achieving the objectives of the Brussels Programme of Action to halve poverty and hunger in LDCs by 2015 requires accelerated and sustained economic growth that is both socially inclusive and environmentally sustainable. To that end, the national development strategies of LDCs should promote not only modernization of the core economy but also include (a) technological change in subsistence activities; (b) universal access to social services; and (c) the creation of meaningful employment through a new approach to rural development and through the development of non-tradable goods and services sectors. As an integral part of all such efforts, Governments should ensure that women equally contribute to, and benefit from accelerated and sustained growth.**

**80. Poverty reduction and national development strategies of the LDCs must include an employment strategy aimed at promoting decent work under the conditions of equality, security and dignity. Specific policies and measures should be adopted to expand the formal sector and integrate informal enterprises in formal economy through their access to credit, information,**

technology while extending labour standards and social protection to the informal economy and creating an enabling environment for establishing and operating a business.

81. Access to improved water and sanitation must be included in a comprehensive and integrated approach to the development of sustainable human settlements in LDCs, along with urban planning, housing development, solid waste management, education and health-care services, transport infrastructure development, employment and enterprise development. A participatory approach and community-based programmes, as well as gender-sensitive policies that ensure full and equal access of women to land, housing, finance and property, should be also embedded in human settlements strategies.

82. The Governments of LDCs and their development partners should implement the “Three Ones” initiative, which provides a framework to ensure national ownership and mobilize international support and resources for a comprehensive response to HIV/AIDS.<sup>24</sup> Donors should provide predictable and sustainable funding to the Global Fund to Fight AIDS, Tuberculosis and Malaria.

83. National development strategies of LDCs must be attuned to their country-specific conditions and priorities. Building productive capacities requires establishing closer links between production, trade, growth and poverty reduction. This can take a number of different forms, such as: (a) broad-based, export-led growth with increased forward and backward linkages to spread the benefits of growth among the population; (b) a balance between growth based on improved agricultural productivity and export-oriented industrialization; (c) an agricultural-led industrialization strategy supported by infrastructure investment and technological progress in agriculture, with forward linkages to processing activities and including an export component; (d) development and diversification through the management of mineral revenues; (e) development of natural-resource-based production clusters; and (f) the promotion of competitive tradables, employment-intensive non-tradables and technological change in subsistence-oriented activities to reduce constraints on household labour time.<sup>25</sup>

84. LDCs should adopt and their development partners support agricultural reforms, crop and product diversification, improved access to land, market, technology, information, microcredit and microfinance, creating an enabling environment for private sector development and foreign investments, promoting agricultural research, transfer of modern technologies and better utilization of indigenous technologies. Development of high-value agricultural products, competitiveness and export diversification should be integrated in poverty reduction strategies of LDCs. Governments’ policies of LDCs should also promote joint titling of land in the names of husband and wife and address gender inequality in formal land titling and customary land tenure.

85. Improving information and communication technology (ICT) access and connectivity in LDCs requires from LDCs and their development partners the fostering of policy and regulatory framework, improving telecommunication infrastructure, lowering costs, market liberalization, human capacity-building, promoting entrepreneurship, public-private partnership, foreign investments and supporting and coordinating international initiatives in favour of the

LDCs. Governments of LDCs should also adopt policies that ensure equal access of women, especially in rural areas, to ICT, in order to increase their potential both as agents and beneficiaries of development.

86. Improvement of physical infrastructure needs creating incentives for private participation, by establishing macroeconomic stability, freedom to repatriate capital, competitive taxes, contract enforcement, transparency and accountability. It also needs increasing public spending and regional cooperation. Improved road and rail links and streamlined border crossings, in their turn, will significantly reduce transport costs.

87. The increase in demand for commodities in the past few years has provided a “window of opportunity” for many LDCs. Governments of LDCs should seize this opportunity by channelling the windfall export incomes into programmes and activities that reduce poverty.

88. Trade preferences for LDCs should be made more effective through such measures as improving rules of origin to reflect the production structures of LDCs and promoting triangular relationships between trade preferences, ODA and FDI.

89. High concentration of exports in certain products makes some LDCs particularly vulnerable to the erosion of trade preferences. Mitigation of the preference erosion needs deepening existing preferential market access, compensation to LDCs most affected by preference erosion and building their productive capacities to diversify into non-preference areas.

90. Turning trade into a true engine of development in LDCs requires mainstreaming trade in poverty reduction and national development strategies, building the necessary human, productive and institutional capacities (including customs facilities and standards compliance), improving infrastructure, strengthening the investment-trade nexus, improving the international trade regime, levelling the playing field for international trade in agricultural commodities, promoting South-South trade, including through regional trade agreements and the Generalized System of Trade Preferences, and strengthening international support, including technical assistance, to LDCs.

91. Every effort must be made to ensure the effective implementation of the agreed outcomes of the sixth WTO Ministerial Conference and the successful conclusion of the trade negotiations as part of the Doha Development Agenda.

92. Poverty reduction and sustainable development in LDCs calls for sustainable forest management, which takes into account the conservation and use of forests while addressing the daily needs of poor people. Sustainable forest management also requires a change in the patterns of consumption and production of forest products, including improvements in fuel-burning in LDCs.

93. Addressing desertification in LDCs needs integrated land and water management, the protection of vegetative cover, a mix of pastoral and cropping land use, a combination of modern technology with traditional knowledge, the participation of local communities and the promotion of alternative livelihoods, including the creation of economic opportunities outside drylands.

94. The entry into force of the Kyoto Protocol to the United Nations Framework Convention on Climate Change in 2005 was a step towards addressing global warming, but it is important to develop a more inclusive international framework, with broader participation of all major emitters, including agreement on targets for emissions of greenhouse gases beyond 2012.

95. Donors should sustain progress achieved in volumes of ODA to LDCs and keep their commitment to achieve the 0.15-0.20 ODA/GNI target by 2010. They should continue improving effectiveness of aid and ensure its predictability and sustainability. LDCs should better integrate aid into their macroeconomic and sectoral programmes and strengthen relevant auditing, accounting and management practices.

96. Donors should make further progress towards full cancellation of outstanding external debt by LDCs. National development programmes of LDCs should address debt sustainability within a coherent framework for debt, trade and finance. Strengthening debt management must be an integral part of the framework.

97. Further increases in FDI volumes require from LDCs to improve their investment climate (including macroeconomic stability, a supportive legal and regulatory framework, effective labour regulation, a sound banking sector and a functioning domestic capital market), human and institutional capacity-building and infrastructure. Enhancing the development impact of FDI needs diversification into higher value-added exports and invites the transfer of skills, knowledge and technology. Joint ventures should also be pursued, to encourage domestic investment.

98. Enhancing the development impact of remittances in LDCs requires a variety of actions, including reducing transfer costs; improving the analysis of remittance flows; building an inclusive financial sector that links remittances to other forms of financial intermediation, like microcredit; engaging diaspora and hometown associations in the national development process; and creating an enabling investment climate.

99. Achieving the objectives, goals and targets of the Brussels Programme of Action calls for continued commitment and renewed energy from the LDCs and their development partners. The second generation of PRSPs and MDG-based national development strategies should anchor the goals and targets of the Programme of Action in scaled-up investment and operational frameworks to be supported by the common country assessment/United Nations Development Assistance Framework and PRSP processes. Those strategies can ensure a result-oriented and country-owned approach to poverty reduction and sustainable development in the LDCs and contribute to better alignment, coordination and harmonization of donors' assistance to the LDCs, as well as synergy and coherence between the Millennium Development Goals and the Programme of Action.

100. National development strategies of LDCs need to be complemented by "quick-win" type interventions, such as providing fertilizers and seeds to improve crop yields; increasing the availability of anti-malarial bed nets; improving water sources; providing school feeding programmes; making

**deworming available to all; and introducing new technologies, such as energy-saving stoves and mobile phones.**

**101. Effective implementation of the Brussels Programme of Action is impossible without addressing gender gaps in poverty reduction and national development strategies of LDCs.**

<sup>23</sup> Additionally, Bhutan and the Lao People’s Democratic Republic met the low-income and indebtedness criteria at the end of 2004, but indicated that they would not avail themselves of

the Initiative. No conclusion was reached on the eligibility of Afghanistan owing to unverified or disputed external debt. Myanmar did not provide the data required to assess its indebtedness and eligibility for HIPC.

- <sup>24</sup> Launched at a high-level meeting on 25 April 2004, the “Three Ones” initiative promotes three principles: ONE agreed AIDS action framework which provides the basis for coordinating efforts of all stakeholders; ONE national AIDS coordinating authority with a broad-based multisectoral mandate; and ONE agreed country level monitoring and evaluation system.
- <sup>25</sup> See details in *The Least Developed Countries Report 2004, Linking International Trade with Poverty Reduction* (UNCTAD/1.DC/2004).

## Annex I

### **Programme of Action for the Least Developed Countries for the Decade 2001-2010: goals and targets**

#### **Goal 1. Attain a GDP growth rate of at least 7 per cent per annum**

##### **Indicator**

1. Annual percentage growth rate in gross domestic product (GDP) (World Bank)

#### **Goal 2. Increase the ratio of investment to GDP to 25 per cent per annum**

##### **Indicator**

2. Gross capital formation (as a percentage of GDP) (World Bank)

#### **Goal 3. Make substantial progress towards halving the proportion of people living in extreme poverty by 2015 (Millennium Development Goal 1, Target 1)**

##### **Indicator**

3. Proportion of population below \$1 (PPP) per day consumption<sup>a</sup> (World Bank)

#### **Goal 4. Make substantial progress towards halving the proportion of people from hunger by 2015 (Millennium Development Goal 1, Target 2)**

##### **Indicator**

4. Proportion of population below minimum level of dietary energy consumption<sup>a</sup> (FAO)

#### **Goal 5. Making accessible, through the primary health-care system, reproductive health to all individuals of appropriate ages as soon as possible and no later than the year 2015**

##### **Indicator**

5. Births attended by skilled health personnel, per cent<sup>a</sup> (UNICEF-WHO)

#### **Goal 6. Making available the widest achievable range of safe, effective, affordable and acceptable family planning and contraceptive methods**

##### **Indicator**

6. Contraceptive use among currently married women aged 15-49, any method<sup>a</sup> (UNDP)

#### **Goal 7. Ensuring that by 2015 all children, particularly girls, children in difficult circumstances and those belonging to ethnic minorities, have access to and complete, free and compulsory primary education of good quality (Millennium Development Goal 2, Target 3)**

##### **Indicators**

7. Net enrolment ratio in primary education, both sexes<sup>a</sup> (UNESCO)
8. Net enrolment ratio in primary education, girls<sup>a</sup> (UNESCO)

9. Net enrolment ratio in primary education, boys<sup>a</sup> (UNESCO)

**Goal 8. Achieving a 50 per cent improvement in levels of adult literacy by 2015, especially for women, and equitable access to basic and continuing education for all adults**

**Indicators**

- 10. Adult literacy rate, both sexes<sup>a</sup> (UNESCO)
- 11. Adult literacy rate, women<sup>a</sup> (UNESCO)
- 12. Adult literacy rate, men<sup>a</sup> (UNESCO)
- 13. Ratio of literate women to men<sup>a</sup> (UNESCO)

**Goal 9. Eliminating gender disparities in primary and secondary education by 2005, and achieving gender equality in education by 2015, with a focus on ensuring girls' full and equal access to and achievement in basic education of good quality (Millennium Development Goal 3, Target 4)**

**Indicators**

- 14. Ratio of girls to boys in primary education<sup>a</sup> (UNESCO)
- 15. Ratio of girls to boys in secondary education<sup>a</sup> (UNESCO)
- 16. Ratio of girls to boys in tertiary education<sup>a</sup> (UNESCO)
- 17. Proportion of seats held by women in national parliament<sup>a</sup> (IPU)
- 18. Share of women in wage employment in the non-agricultural sector<sup>a</sup> (ILO)

**Goal 10. Reducing the infant mortality rate below 35 per 1,000 live births by 2015 (Millennium Development Goal 4, Target 5)**

**Indicator**

- 19. Infant mortality rate<sup>a</sup> (UNICEF-WHO)

**Goal 11. Reducing the under 5 mortality rate below 45 per 1,000 live births by 2015 (Millennium Development Goal 4, Target 5)**

**Indicator**

- 20. Under-five mortality rate<sup>a</sup> (UNICEF-WHO).

**Goal 12. Reducing the maternal mortality rate by three quarters of the current rate by 2015 (Millennium Development Goal 5, Target 6)**

**Indicator**

- 21. Maternal mortality ratio<sup>a</sup> (UNICEF-WHO)

**Goal 13. Reducing the number of undernourished people by half, by the year 2015**

See 4 above.

**Goal 14. Reducing by half, by 2015, the proportion of people who are unable to reach or afford safe drinking water (Millennium Development Goal 7, Target 10)**

**Indicator**

22. Proportion of population with sustainable access to improved water sources, both urban and rural<sup>a</sup> (UNICEF-WHO)

**Goal 15. Reducing HIV infection rates in persons 15-24 years of age by 2005 in all countries, and by 25 per cent in the most affected countries (Millennium Development Goal 6, Target 7)**

**Indicators**

23. HIV prevalence rate among adults, aged 15-49 years<sup>a</sup> (UNAIDS-WHO-UNICEF)

24. HIV prevalence among pregnant women, aged 15-24 years<sup>a</sup> (UNAIDS-WHO-UNICEF)

**Goal 16. Increasing the percentage of women receiving maternal and prenatal care by 60 per cent**

**Indicator**

25. Women reporting at least one antenatal visit, per cent (UNDP)

**Goal 17. Halving malnutrition among pregnant women and among preschool children in LDCs by 2015**

**Indicator**

26. Prevalence of underweight children under five years of age<sup>a</sup> (UNICEF-WHO)

**Goal 18. Substantially reducing infection rates from malaria, tuberculosis and other killer diseases in LDCs by the end of the decade; reducing tuberculosis (TB) deaths and prevalence of the disease by 50 per cent by 2010; and reducing the burden of disease associated with malaria by 50 per cent by 2010 (Millennium Development Goal 6, Target 8)**

**Indicators**

27. Prevalence rate associated with malaria<sup>a</sup> (WHO)

28. Death rate associated with malaria<sup>a</sup> (WHO)

29. Prevalence rate associated with tuberculosis, per 100,000 population<sup>a</sup> (WHO)

30. Death rate associated with tuberculosis, per 100,000 population<sup>a</sup> (WHO)

**Goal 19. Promoting child health and survival and reducing disparities between and within developed and developing countries as quickly as possible, with particular attention to eliminating the pattern of excess and preventable mortality among girl infants and children**

**Indicators**

31. Proportion of 1-year-old children immunized against measles<sup>a</sup> (UNICEF-WHO)

32. Proportion of 1-year-old children immunized against tuberculosis<sup>a</sup> (UNICEF-WHO)

33. Proportion of 1-year-old children immunized against DPT<sup>a</sup> (UNICEF-WHO)

**Goal 20. Improving the health and nutritional status of infants and children**

See 26, 30, and 31-34.

**Goal 21. Promoting breastfeeding as a child survival strategy**

**Indicator**

34. Per cent of children under 6 months who are exclusively breastfed (UNICEF)

**Goal 22. Increasing road networks or connections in LDCs to the current level of other developing countries and urban road capacities, including sewerage and other related facilities, by 2010 (Millennium Development Goal 7, Target 10)**

**Indicators**

35. Roads (km) (World Bank-International Road Federation)

36. Paved (primary) roads (as a percentage of total roads) (World Bank-International Road Federation)

37. Proportion of population with access to improved sanitation, urban and rural<sup>a</sup> (UNICEF-WHO).

**Goal 23. Modernizing and expanding ports and airports and their ancillary facilities to enhance their capacities by 2010**

**Indicators**

38. Aircraft departures (in thousands) (World Bank-ICAO)

39. Air freight (millions ton-km) (World Bank-ICAO)

**Goal 24. Modernizing and expanding railway connections and facilities, increasing their capacities to the level of those in other developing countries by the end of the decade**

**Indicators**

40. Rail lines (km) (World Bank-International Road Transport Union)

41. Rail freight per km (World Bank-International Road Transport Union)

**Goal 25. Increasing the communication networks of LDCs, including telecommunication and postal services, and improving access of the poor to such services in urban and rural areas to reach the current levels in other developing countries**

**Indicator**

42. Permanent and mobile post offices (World Bank-IPU)

**Goal 26. Increasing computer literacy among students in higher institutions and universities by 50 per cent and in junior and high schools by 25 per cent, by 2015**

**Goal 27. Increasing average telephone density to 5 main lines per 100 inhabitants and Internet connections to 10 users per 100 inhabitants by the year 2010 (Millennium Development Goal 8, Target 18)**

**Indicators**

- 43. Telephone lines and cellular subscribers per 100 population<sup>a</sup> (ITU)
- 44. Internet users per 100 population<sup>a</sup> (ITU)

**Goal 28. Donor countries providing more than 0.20 per cent of their gross national product as ODA to LDCs: continue to do so and increase their efforts (Millennium Development Goal 8, Target 13)**

**Indicator**

- 45. Net ODA total to the LDCs, as a percentage of OECD/DAC donors' gross national income<sup>a</sup> (OECD)

**Goal 29. Other donor countries which have met the 0.15 per cent target: undertake to reach 0.20 per cent expeditiously**

See 45 above.

**Goal 30. All other donor countries which have committed themselves to the 0.15 per cent target: reaffirm their commitment and undertake either to achieve the target within the next five years or to make their best efforts to accelerate their endeavours to reach the target.**

See 45 above.

*Notes*

<sup>a</sup> A Millennium Development Goal indicator.

## Annex II

## Statistical data specific to individual countries

Table 1  
Economic growth and fixed capital formation
