Global Investments in R&D

The UNESCO Institute for Statistics (UIS) is the statistical office of UNESCO and is the UN depository for global statistics in the fields of education, science and technology, culture and communication.

@UNESCOstat

This fact sheet presents the latest UIS data on research and experimental development (R&D) available as of December 2016.

A snapshot of R&D expenditure

This fact sheet illustrates global and regional trends in the allocation of resources to research and experimental development (R&D). The UIS releases data on resources devoted to R&D once every year – in August. For developing countries, however, data are collected on a biennial basis.

The most commonly-used indicators to monitor resources devoted to R&D worldwide are gross domestic expenditure on R&D (GERD) expressed in purchasing power parity (PPP\$) and R&D intensity (percentage of gross domestic product (GDP) devoted to R&D activities). **Figure 1** presents the distribution of R&D expenditure by region.

Figure 1. Where are R&D investments made?

Shares of world R&D expenditure (GERD) by region, 2008, 2010, 2012 and 2014

Source: UNESCO Institute for Statistics estimates, December 2016

Figures 2 and 3 illustrate the distribution of R&D intensity by region. This indicator presents R&D expenditure relative to the size of the regional or national economy.

Figure 2. Which regions are most R&D intensive?

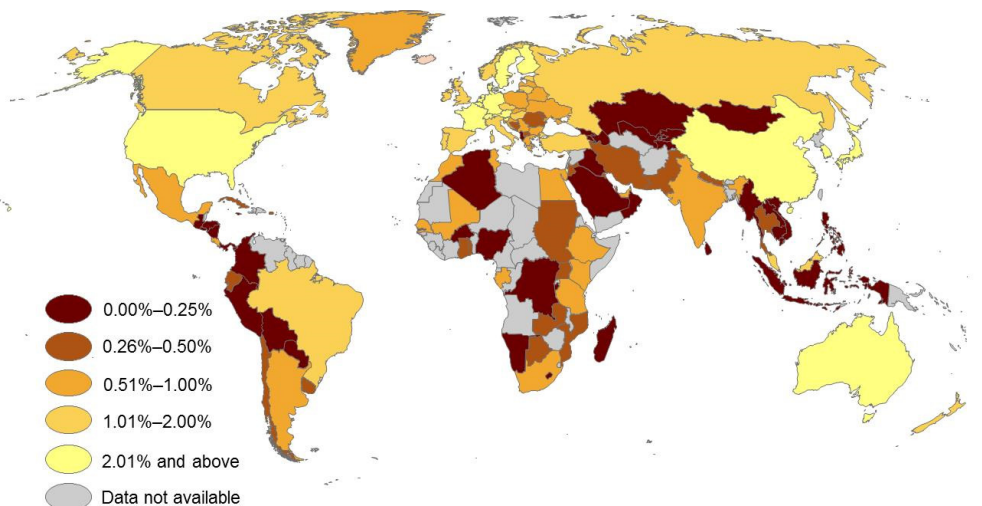

Gross domestic expenditure on R&D as a percentage of GDP by region, 2008, 2010, 2012 and 2014

Source: UNESCO Institute for Statistics estimates, December 2016

Figure 3. A snapshot of R&D intensity

Gross domestic expenditure on R&D as a percentage of GDP, 2014 or latest year available

Source: UNESCO Institute for Statistics, August 2016

The 2014 regional averages for the share of GDP devoted to R&D activities are:

- 1.7% for World
- 0.3% for Arab States
- 1.1% for Central and Eastern Europe
- 0.2% for Central Asia
- 2.1% for East Asia and the Pacific
- 0.7% for Latin America and the Caribbean
- 2.4% for North America and Western Europe
- 0.7% for South and West Asia
- 0.4% for Sub-Saharan Africa

Figure 4 illustrates the world's top leaders in R&D expenditure, measured in PPP\$ for the latest year available. PPP\$ better reflects the real value of investments and allows for more comparability by eliminating differences in price levels among countries. Essentially, this means that a sum of money converted into US dollars at PPP rates will buy the same basket of goods and services in all countries.

Figure 4. World's top 10 leaders in R&D investment
GERD ('000, PPP\$), 2014 or latest year available

Notes: -1 = 2013; -3 = 2011.

Which sectors invest the most in R&D?

Figures 5, 6 and 7 illustrate R&D expenditure broken down by source of funds. This refers to total gross intramural expenditure on R&D during a given period, financed by different sectors of the economy (business enterprise, government, higher education or private non-profit organizations) or from abroad, and expressed as a percentage.

Figure 5. Funding in the Americas

GERD by source of funds, 2014 or latest year available

Notes: -1 = 2013; -2 = 2012; -3 = 2011; -5 = 2009; -6 = 2008.

Which sectors receive the most investment?

Figures 8, 9 and 10 depict R&D expenditure broken down by sector of performance. This refers to total gross intramural expenditure on R&D during a given period by institutions corresponding to each sector (business enterprise, government, higher education and private non-profit organizations), independent of the source of funds and expressed as a percentage.
