

New completion rate estimation method

A proposal for SDG 4 reporting

Technical Cooperation Group
Mexico City, 15 November 2018

Manos Antoninis
Global Education Monitoring Report

Target and indicator

Target 4.1

*By 2030, ensure that all girls and boys **complete** free, equitable and quality primary and secondary education leading to relevant and effective learning outcomes*

Thematic indicator 4.1.4

Completion rate (primary education, lower secondary education, upper secondary education)

Monitoring completion

Multiple sources provide data

GEM Report proposes a new model to estimate completion rates:

- ▶ to use survey data **efficiently** and
- ▶ **project** rates to most recent year

Monitoring completion

Multiple sources provide data

GEM Report proposes a new model to estimate completion rates:

- ▶ to use survey data **efficiently** and
- ▶ **project** rates to most recent year

In **Mali**, the last survey is from 2015 but the model projects the primary completion rate to 56% in 2018

Challenges

In many countries:

- ▶ Late completion

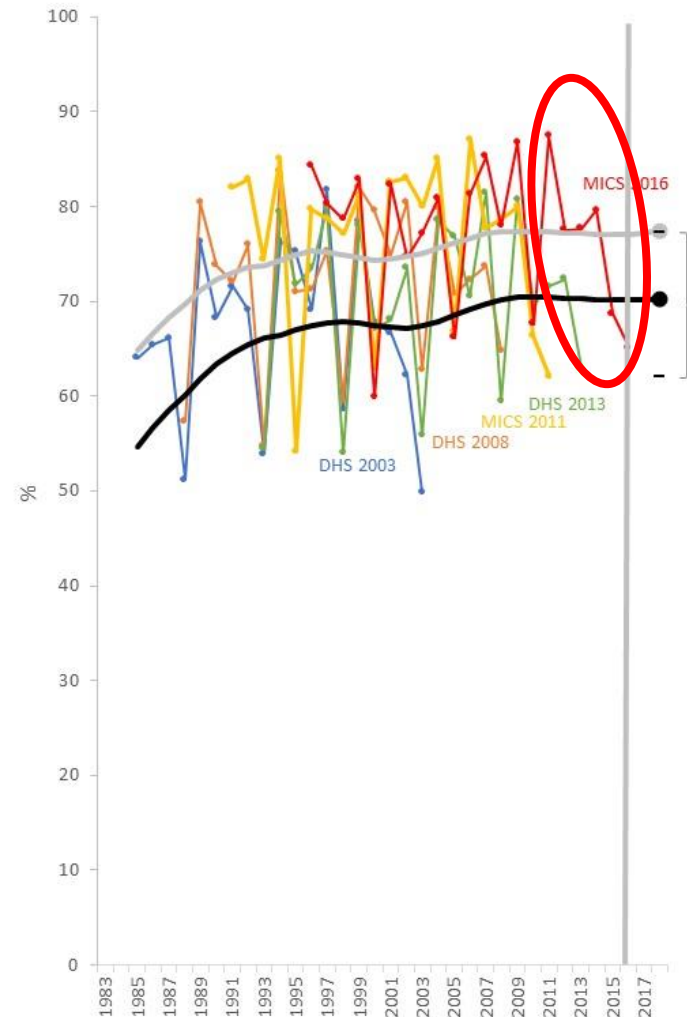

Challenges

In many countries:

► Late completion

In **Nigeria**, there is a 7 percentage point gap in completion rates between 14-16 year olds and the full cohort

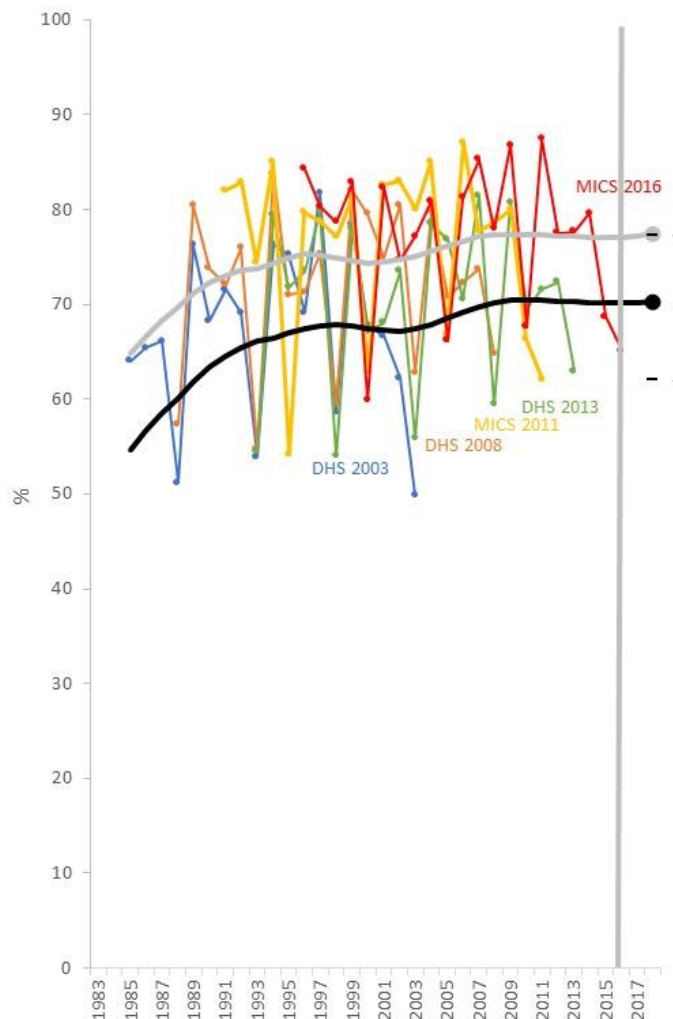

Challenges

In many countries

- ▶ Late completion

In **Nigeria**, there is a 7 percentage point gap in completion rates between 14-16 year olds and the full cohort

- ▶ Age lumping
- ▶ Survey bias

Faced with similar challenges, health developed similar models

Levels & Trends in
Child Mortality

Report 2018

Estimates developed by the
UN Inter-agency Group for
Child Mortality Estimation

STATISTICAL TABLE
**Country, regional and global estimates of mortality
among children under age 5 and children aged 5–14**

Country	Under-five mortality rate (U5MR) with 95 per cent uncertainty interval (deaths per 1,000 live births)						Number of under-five deaths with 95 per cent uncertainty interval (thousands) ^a								
	1990		2017		Annual rate of reduction (ARR) (per cent) 1990-2017		1990		2017		Annual rate of reduction (ARR) (per cent) 1990-2017

FIGURE 1
Child mortality declined by more than half for children under 5 years of age and children aged 5–14 years since 1990
Global mortality rates and deaths by age, 1990-2017

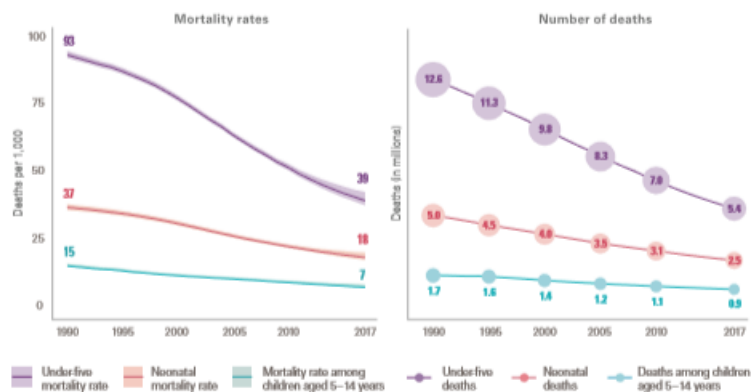

FIGURE 7
Empirical under-five mortality data in Nigeria and Papua New Guinea

Note: All data available for the country are shown as coloured points, with observations from the same data series joined by lines, and each colour identifying different data sources. Grey bands in the left plot represent the standard errors of the observations where available or applicable. Series considered but not included in the statistical model due to substantial non-sampling errors or omission appear with dashed lines.

Faced with similar challenges, nutrition developed similar models

LEVELS AND TRENDS IN CHILD MALNUTRITION

UNICEF / WHO / World Bank Group Joint Child Malnutrition Estimates
Key findings of the 2018 edition

Stunting affected an estimated 22.2 per cent or 150 million children under 5 globally in 2017.

In 2017, wasting continued to threaten the lives of an estimated 72 per cent or 55 million children under 5 globally.

An estimated 5.6 per cent or 38.3 million children under 5 around the world were overweight in 2017.

These new estimates supersede former analyses and results published by UNICEF, WHO and the World Bank Group.

	Stunting		Overweight		Wasting and Severe Wasting	
	2010	2017	2010	2017	2010	2017
	% stunted (underweight and severe)	% stunted (underweight and severe)	% overweight (underweight and severe)	% overweight (underweight and severe)	% wasted (underweight and severe)	% wasted (severe)

GLOBAL OVERVIEW

Malnutrition rates remain alarming: stunting is declining too slowly while wasting still impacts the lives of far too many young children

Stunting Overweight Wasting 95% confidence interval

Percentage of stunted, overweight and wasted children under 5, global, 2000-2017

Number (millions) of stunted, overweight and wasted children under 5, global, 2000-2017

Source: UNICEF, WHO, World Bank Group joint malnutrition estimates, 2018 edition. See notes on data on page 14 on why only one time point is presented for wasting on the graphs above.

Population coverage for the most recent period (2013-2017), by UN regions

	Africa	Asia*	Latin America and Caribbean	Oceania**	More Developed Regions***	Global
Stunting						
Number of countries with at least one recent (2013-2017) survey	36/54	25/47	12/33	3/14	2/50	78/202
Population coverage	87%	84%	44%	11%	1%	73%
Overweight						
Number of countries with at least one recent (2013-2017) survey	35/54	24/47	11/33	3/14	2/50	75/202
Population coverage	84%	61%	38%	11%	1%	60%

Next steps and recommendations

In terms of development

- ▶ Further refine methodology
- ▶ Analyse data from more countries and more data sets
- ▶ Expand analysis to lower and upper secondary education
- ▶ Produce regional and global averages

In terms of use

- ▶ Consider endorsing the idea of using projections
- ▶ Propose it as second global indicator for target 4.1
- ▶ Combine it with global indicator 4.1.1
