

As school closures due to COVID-19 impact the majority of learners, education systems deployed remote learning solutions. Motivation is a central to learning and here are tips for teachers on what they can do to motivate learners in such times:

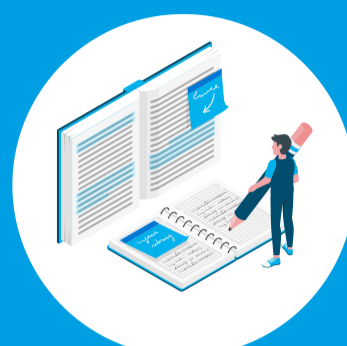

1 Set Clear Goals with the Participation of Learners

Assist learners to set goals

Set objectives compatible with the learners' own goals

Ensure that tasks are based on relatable and realistic scenarios

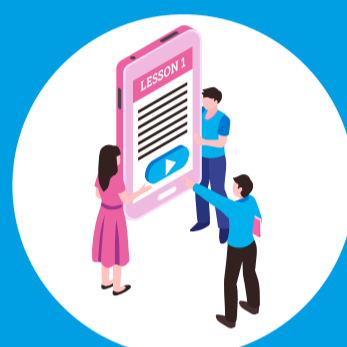

2 Define the Purpose of Each Lesson

Clarify the purpose of each lesson and connect it with the learners' long-term learning goals

Break down learning into meaningful segments, so that interest is sustained

Use diverse teaching strategies

3 Invite, Challenge and Respond!

Avoid judgements and provide constructive comments and feedback

React closely to what learners say or ask, and provide them with appraisal for their accomplishments

Follow up with learners regularly, and give them room for reactions, questions, and suggestions

4 Encourage Participation, Collaboration and Creativity!

Encourage learners to engage and actively participate

Encourage learners to share their own stories/experiences

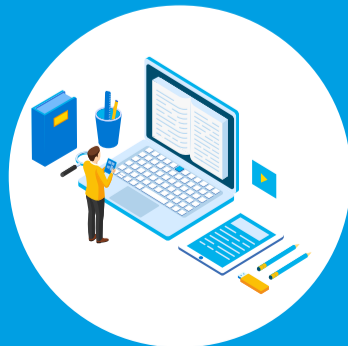

Encourage various forms of expression and be open to ideas proposed by learners

5 Customize Learning

Tailor lessons to the interests of learners

Provide learners with tools to reduce dependence on the teacher

Engage learners in topics they are interested in
