7.1.1. Explain your response here.	In the Czech Republic, necessary targeted and tailored health and social care education/instruction is part of all prevention and treatment measures provided by respective medical or social care facilities and education/instruction institutions and offered to individuals or target groups in connection with all physical and mental diseases or disorders, handicaps and disabilities or social disadvantages. All health and social care activities incl. their education/instruction parts are provided by networks of health and social care institutions/facilities/workplaces which are organised and arranged to proceed from epidemiology measures and extensive screenings to intensive care interventions, covering thus all kinds of regular and occasional action within the health and social care systems incl. their related external and environment components (in schools and families, companies, local, urban/suburban and street communities, etc.). In this way, all necessary education/instruction is contained in existing kinds and scopes of work within the health and social care systems, and so any additional education and training would be superfluous and less effective.

8.3. To what extent do literacy and basic skills programmes contribute to strengthening the following cultural and social resources in your country? [Other]	
8.3.1. Please specify	No special ALE programmes of this kind are organised in the Czech Republic as they are not necessary (at least up to now), because all therein treated issues are contained in the comparatively very good compulsory general and the subsequent initial vocational education and training of youths and young adults (up to the first leaving of the Czech educatinal and training system), attended by nearly all youth population (both citizens and residents) living on the territory of the CR. For this reason, ALE in the Czech Republic is above all professionally oriented (CVET, refreshing or innovation training, or retraining). This implies, too, that its qualification levels (as per EQF and the Czech NQF as well) are 3 or more, because there are no vocational qualifications at the EQF levels 1 and 2. It is not clear in the present to what purposes and for what target groups of adultes should literacy and basic skills pogrammes serve in the future (for some immigrants, asylum applicants and residents from third countries, and perhaps also for some Czech citizens or citizens of other EU countries staying and/or working on the territory of the CR).
