

Preface

First and foremost, it is important to stress and emphasize that the COVID-19 Pandemic is a matter of Public Health and mitigating its impact depends greatly on the advice of the Ministry of Health to prevent or treat COVID-19 infections. The scale of the Pandemic is however, not just a matter of Public Health and will impact our social and economic life. Therefore, an effective public health response requires the support from other sectors and the general public. Among the Education Sector Policy 2016-2030 objective is to work in close coordination with the Ministry of Health to educate students, teachers and parents, about interventions that support the curbing of the spread of such contagious diseases. As a matter of fact, this Education Sector Response to COVID-19 is anchored on the National COVID-19 Response Plan under the leadership of the Ministry of Health.

The closure of schools is part of government's large-scale of non-pharmaceutical interventions of social distancing that include the banning of large gatherings. This social distancing restriction has affected education at all levels, as learners and teachers are unable to physically meet in schools and other learning institutions including majlis for effective learning to take place.

In addition, this closure of schools will limit opportunities for learning during this period of social distancing and research has shown that *time spent learning or learning time*, is one of the most reliable predictors of opportunities for learning hence it's imperative for this reason that my Ministry took a proactive approach to contribute to the mitigation of the impact of the Pandemic and reduce the learning loss during the period of school closure.

Given this situation, my Permanent Secretary established and chairs a multidisciplinary technical committee in charge of overseeing the Education Response Strategy to the COVID-19 Pandemic for the short and medium terms. This committee is charged with the responsibility to "develop and support the implementation of a coherent, effective and equitable educational responses to the COVID-19 Pandemic".

The guiding principle and objectives of the Education Response Strategy include the following;

- To ensure that children and their families have access to relevant and timely information on COVID-19 to protect themselves from infection and to reduce the transmission rate within their communities.
- 2. To ensure continuity of learning during the initial 21-days school closure and progressively expand the curriculum coverage using multiple platforms in the medium

to long terms with particular attention of reaching children at risk of being excluded from the distance learning means.

- 3. To strengthen the capacity and resilience of the Education Sector to develop functional multiple platforms for delivering the curriculum and to guarantee continuity of learning under all circumstances and leaving no child behind.
- 4. To ensure that students living in underprivileged family households are supported with basic food items.

This Education Sector Response Plan to COVID-19 presents programmes that provide learning opportunities through Distance Education for children, youth and adults including underserved groups and those with special needs during the period and beyond. Administrative measures to ensure gradual recovery of the lost instructional hours will include;

- a) Extension of the school day or week, paying attention to double-shifting school where it is applicable.
- b) Intensive and extensive classes for exam classes to recover lost time with the option of rescheduling of examinations.
- c) Rescheduling the curriculum delivery plans.
- d) Strengthening the monitoring of Implementation of the Recovery Strategy through Cluster Monitors.

Finally, we are grateful to Government and to our partners for their collaboration and support in coming up with this timely response to COVID-19 plan and to those who have contributed to the accomplishment of this critical task which would have been impossible without the team spirit of the multi-stakeholder technical committee.

Hon. Claudiana A. Cole

Minister of Basic and Secondary Education

Background

On 17 March 2020 His Excellency the President of the Republic of The Gambia address the nation on the status of the Coronavirus (COVID-29). Subsequently, he declared a closure of all schools and educational institutions which is a measure to protect children and control the spread of the virus. The Education Sector under the leadership of the Ministry of Basic and Secondary Education (MoBSE) initiated a COVID-19 technical level consultation to develop a national strategy aimed at providing all children and their families appropriate information on COVID-19; ensure that appropriate measures in place for minimum level of continuity of learning; and to engage in recovery and resilience building activities in view of post-COVID. The nationwide school closure will directly affect about 674,300 children from Early Childhood Development to Senior Secondary School. In addition, about 18,000 children in Majalis (Koranic) Schools, 600 students benefitting from second chance education and several thousands of adolescents and youths in non-formal, higher and tertiary education are affected.

The education sector is faced with an unprecedented challenge of delivering the curriculum using alternative and innovative modes. It is estimated that 72 hours of instructional time will be lost during the initial 21 days of school closure. More hours will be lost if the closure period covers an extended period, thus the country will be seriously challenged to meet its target of 880 hours of instruction annually. This COVID-19 Education Sector Response Plan is aimed at mitigating the loss of instructional hours and keeping school children engage and ensuring continuity of learning at home. The response plan solicits considerable support from parents, families and the general public at large. It particularly aims to reassure students and parents especially students in examination classes acquire full support of the Education Sector despite school closure.

Under the circumstances, the Education Sector recognizes the fact that thousands of school children are at the risk of loitering in the street of even selling in the street to support their families to manage the loss of income as result of restriction in movement of the population. As, it is critical to keep all learners at home for safety and continued learning, the plan seeks to engage relevant partners such as WFP to envisage alternative strategies to ensure that school meals reach students in their homes. The education sector will endeavour to mitigate this crisis so that students will not suffer from hunger and as well accorded opportunity of continuing their education. Therefore, this strategy will continue to ensure the provision of key vitamins and micronutrients they receive through school meals.

COVID-19 Scenarios

The COVID-19 quickly and globally degenerated into a global pandemic. As a results school in The Gambia are initially closed for 21 days beginning 18 March 2020. The outlook both within

the country and outside shows that the school closure could last for week and even months. To this end the Education Sector COVID-19 Response Plan is based on three scenarios:

Scenarios 1: This is the unlike situation where the infections rate are so low, and risk are well mitigated for schools to re-open after the first 21 days. During this period a distance education programme through radio and TV will be started to keep children busy at home and safe them from infection.

Scenarios 2: This is based on the likelihood that the risk of COVID-19 will be moderate to high, resulting in schools being closed for up to 3 months or more. During this period the radio and TV distance learning will be scaled-up, consideration will be made to deliver printed curriculum materials to children and alternative curriculum delivery platforms will be searched and used.

Scenarios 3: This is when the country fully recovers from the COVID-18 pandemic, and schools fully operational. This phase will be used to fix broken systems, build new ones and ensure that resilience of the education sector is at a level ready to support the delivery of the curriculum in full either through face-to-face in classrooms or distance learning means.

Administrative Measures

During the post-COVID period and beyond administrative measures will be put in place to ensure gradual recovery of the lost instructional hours. These will include:

- Extension of the school day or week, paying attention to double-shifting where it is applicable
- Intensive and extensive classes for exam classes to recover lost time with the option of rescheduling of examinations
- Rescheduling the curriculum delivery plans
- Strengthening the monitoring of Implementation of the Recovery Strategy through Cluster Monitors

This Education Sector COVID-19 Response is anchored to the National COVID-19 Response Plan under the leadership of the Ministry of Health. The Permanent Secretary, Ministry of Basic and Secondary Education, will ensure the establishment and functioning of appropriate channels of communication and reporting to the national level. The Office of the Permanent Secretary, MoBSE will be responsible for the coordination of the Education Response Plan with support from relevant Directorates, Units and partners as indicated in the matrix below. The MoBSE Permanent Secretary has already set up a MoBSE Emergence Response Group to monitor and advise him on the implementation of this plan. The Local Education Group (LEG) will be the convener to leverage external support and funding for the effective implementation of the plan. The strategy will leverage partnership with Civil Society Organization and community-based organization to attain the desired results.

The Objectives

The overarching objective of this Education Sector COVID-19 Response Plan is to ensure that no child is left behind. It is understood that all the curriculum delivery modes (e.g. radio, TV, home-based study, online learning, etc.) during the school closure period may not work for every child, but conscious effort will be made to ensure that children at the risk of being left behind (e.g. children with disabilities, with no access to internet and TV; with poor radio signal, etc.) are served appropriately.

The specific objectives of this plan are:

- 1. To ensure that children and their families have access to relevant and timely information on COVID-19 to protect themselves from infection and to reduce the transmission rate within their communities.
- To ensure continuity of learning during the initial 21-day school closure and progressively expand the curriculum coverage using multiple platforms in the medium to long terms with particular attention of reaching children at risk of being excluded from the distance learning means.
- To strengthen the capacity and resilience of the Education Sector develop functional multiple platforms for delivering the curriculum and to guarantee continuity of learning under all circumstances and leaving no child behind.
- 4. To ensure that students living in underprivileged family households are supported with basic food items.
