**A MULTILINGUAL, ACCESSIBLE AND
FLEXIBLE TOOL FOR ASSESSING YOUTH AND
ADULT LITERACY AND NUMERACY SKILLS**

KEY FEATURES

The Everyday-Life Practices and Skills Survey (e-PASS) is an assessment tool for measuring the literacy and numeracy skills of individuals aged 15 and older. It enables Member States to generate data for reporting on SDG 4 indicator 4.6.1.

1

Accessible

The application is available in four languages (English, Arabic, Spanish and French). It can be downloaded for free (© Play Store and © Apple Store) and used on a smartphone or a tablet.

2

User-friendly

Survey respondents are provided with a unique identifier that allows them to access an intuitive user interface that makes it easy to navigate through a simple, interactive questionnaire. Using the touchscreen features, the respondent can fill in the questionnaire on the interviewer's or her/his own device.

3

Flexible

The application does not require a connection to the internet or a mobile network to be used. The answers to the questionnaires are automatically transferred to the monitoring platform when a connection is available.

4

Professional

A web-based platform generates identifiers, stores data, monitors data collection, performs descriptive statistics for database quality monitoring, and exports the final databases in different formats, depending on countries' needs.

PROCESS

A

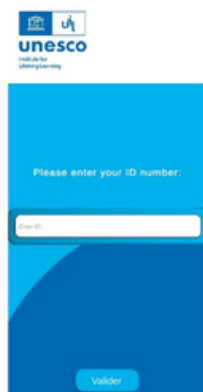

Get the app

Download the e-PASS app for free from © Play Store or © Apple Store.

B

Enter the app

Enter a unique Identifier Number (ID) associated with each respondent.

C

Take the test

Navigate through the questionnaire with the touchscreen.

D

Monitor

Generate the IDs and follow the data collection on the dedicated platform.
